500 MILE RACE AT BROOKLANDS.

"The Motor Cycle," JULY 7TH, 1921.

1698

4^D

THE MOTOR CYCLE

Circulation Exceeds 100,000 Weekly.

Founded 1903.

COVERS EVERY PHASE OF THE MOVEMENT
AND CIRCULATES THROUGHOUT THE WORLD

No. 954. Vol. 27.

Thursday, July 7th, 1921.

Price 4d.

For Sport and Tour.

A fast and economical machine, the petrol consumption is approximately 120 miles per gallon, and the weight of 185 lbs. brings the machine under the 30/- tax.

ROYAL RUBY

27 h.p. 349 c.c. Single Cylinder (4 stroke) Sports Model. Price 80 Gns. Touring Model with upturned Bars and Footboards. 82 Gns. Send for illustrated 1921 catalogue.

The Ruby Cycle Co., Ltd., Dept. 1, Altricham nr Manchester Showrooms and Services Depot, 162, Deansgate Manchester, where demonstrations and visits to the works can be arranged.

Speed with Ease

WE are glad to say that the introduction of the "Matchless" Sports Model has been joyfully acclaimed by all Motor Cyclists.

Briefly, this is the reason:

Everyone agreed that the "Matchless" Combination lead the way in efficiency, economy, and above all, reliability, but many were desirous of more speed. To meet this widespread desire the new "Matchless" Model takes its place on the market.

It has all the patented features of the 1921 model; Spring Frame, 3-speed Gear, and Detachable Wheels, with these following amendments:

A low Sporting Sidecar Body, Foot Rests in place of the usual Foot Boards, and suitable Handle-bars.

The well-known "Matchless" M.A.G. Engine will be specially selected and "tuned up" to give greater speed than that obtained on a Standard Model. The Spare Wheel will be mounted on the side of the machine.

In appearance and results there will be "nothing on the road to touch it." The body is less expensive, and the purchaser benefits by this saving. We are confident that the Sports Model will soon be as popular as the 1921 Standard Model.

Early Delivery is assured, ask you agent all about this Model.

The Five Hundred Mile Race.

BEFORE any really important event there is always a tendency to exaggerate the hardships of the test, and on Saturday last it was freely mooted that not 5% of the starters would finish the 500 mile race at Brooklands. However, the prognostications of the pessimists came to naught, and thirty-three machines out of sixty-four starters (or just over 50%) completed one of the severest trials ever provided, and incidentally set up many new records during the process.

It was expected that a big twin would carry off the premier award, and this type secured the first three places. Next came a well tried 500 c.c. machine. It was in the smaller classes that the greatest surprises occurred, the 350 c.c. class being won on a two-stroke with considerable ease, after a magnificent display of consistent riding, while the speed of the winning 250 c.c. machine was within a fraction of the second 350 c.c.

Two-strokes ran with wonderful regularity, and definitely refuted the suggestion that this type of engine is unable to stand prolonged speed work.

On the whole, the race provided a marvellous testimony to the endurance of the modern motor cycle. Though the excellence of the British single was demonstrated once again, the absence of a fast British big twin was sadly obvious.

Brakes, valve gear, and lubrication are the points which stand out as being most in need of improvement. Undoubtedly, the introduction of a 500-mile track race has been justified, and, just as certainly, it should become an annual event of the first importance. Though not spectacular from the viewpoint of the casual observer, it is full of interest to the entrant and manufacturer, who should acquire much valuable information as to the capabilities of his mount. While being, perhaps, the most strenuous event of the year, it is by no means an event to be won by the freak speed machine; in fact, this type is penalised by the regulations.

Reliability Trials on the Continent.

WITH the present year's glut of English competitions, motor cycle manufacturers find it difficult to decide as to which to support. For this reason, perhaps, the International Six Days in Switzerland has not received the consideration due to it. This year organised by the Swiss Motor Cycle Union for the cup presented by the British Cycle and Motor Cycle Manufacturers' and Traders' Union, this old-established International event first saw the light in the shape of a race between representatives of different countries. As, however, the movement progressed, it was felt that when the International Federation of Motor Cycle Clubs was revived, it would be more beneficial to the industry for manufacturers of different countries to match their products against one another in a reliability trial.

Up to the present time important races in France and elsewhere have been fairly well supported by the British trade. These races take place on flat, safe roads, and are all very well in their way; but, if our manufacturers have any regard for overseas trade, they would do well to consider the International Six Days Trial, especially as this year it will be held in Switzerland, a country which, as all the world knows, contains some of the longest hills that can be encountered, which compare favourably even with the highest in our overseas dominions. We shall be surprised if anything in the nature of a freak hill is produced, but what we all want to know is how the average British motor cycle or sidecar outfit will behave on the long, tiring gradients which abound in Continental countries, and also in our own overseas dominions. How British machines behave in English and Scottish trials we know quite well, but here is virgin ground, and the lessons to be learned from this trial are, we think, likely to be exceedingly valuable. The trial is in the hands of the Swiss Motor Cycle Union, and it is safe to assume that the organisation will be of the very best. 6354

OCCASIONAL COMMENTS BY IXTON

350 c.c. Sidecars.

NOW that the 350 c.c. machine has beaten the larger type in the T.T., we shall probably see the small sidecar outfit catalogued by a large number of makers. So long as it is not asked to accommodate a large family it will prove a useful addition to existing types; but if too much is claimed for it it will grow into a "five hundreder" again.

Toujours the A.J.S.

IN the T.T. there is only one place where a racing man gets the full benefit of 500 c.c., viz., along the straights towards Sulby on the far side of the Island. What he gains on the swings, he loses on the roundabouts. Over the bulk of the Manx racing route the longer wheelbase of the $3\frac{1}{2}$ h.p. makes it inferior to a cobby $2\frac{3}{4}$ h.p. in corner work. The extra weight of the $3\frac{1}{2}$ h.p. tires out the riders faster than the lighter $2\frac{3}{4}$ h.p. I don't think that a 350 c.c. will win the Senior next year if the present conditions are maintained; for several of the bigger machines which were very "green" this year will be stancher in twelve months' time. But it is certain that the Manx course doesn't give the $3\frac{1}{2}$ h.p. enough rope. Thus a really good $2\frac{3}{4}$ h.p., ridden by a first-class man, will always press the 500 c.c. hard, and would occasionally win outright.

The Alternatives.

THE line of least resistance will be to continue the existing arrangement for another year, and see what happens. (The effect would be to develop the steering, reliability, brakes, etc., of the $3\frac{1}{2}$ h.p. without demanding more h.p. from it.) If this solution does not commend itself to the powers that be, there are two others. One is to limit the Senior race to 350 c.c., in which case the most popular type of British engine will be abandoned to indirect methods of development, and the Scott Co.—for example—will be tempted to build a special racing engine wholly

distinct from their commercial models. (This would be a pity, as 500 c.c. is still the practical minimum for sidecar work.) The other plan is to discover a fresh course, embodying more straights and longer straights. There is no such roads in the Isle of Man. There are plenty of such courses in England, but it is doubtful whether the legal preliminaries are possible. There are plenty of such routes in France, and the French municipal authorities would subsidise the A.C.U. to cross the water, while Ireland was freely mooted in the Island last month.

The A.B.C. at Le Mans.

THOUGH trade depression robbed us of the delight of watching a racing A.B.C. in the T.T., some of us will see the French edition at Le Mans. At Provins the other day this machine proved itself appreciably faster than the cream of its compatriots, but one of the riders broke a valve, and the other battered too light a back wheel to pieces. The French racing A.B.C. machines do 5,200 r.p.m. under load on the road. Nevertheless, my French correspondent considers that o.h.v. motor cycle engines should have an overhead camshaft, operating the valves direct. The commoner type of o.h.v. entails in his opinion too much weight for racing revs; moreover, with a pushrod-rocker-tappet outfit you must use a ridiculously heavy spring and a correspondingly sturdy valve, or else everything "floats." (This objection ultimately narrows itself down to the question whether we can get a light valve which will stand a colossal spring; the T.T. suggests that we can, but why not fit return springs to the rocker gear?)

Ixtion's "MOTOR CYCLE REMINISCENCES" have lately been published in book form, price 5s. 3d. post free, from "The Motor Cycle" Offices, 20, Tudor Street, E.C.4.

Occasional Comments.—

A Good Gradometer.

SOME months ago I alluded to the Tapley gradometer as a good instrument for verifying gradients. I originally made a special attachment for mounting a car model on my motor cycle, but the inventor has now brought out a special motor cycle edition. A clip is bolted to the top tube, handle-bar, or special accessory crossbar, and this clip is thin enough to clear the tank on any make of machine. The instrument is fixed to the clip by a ball joint, so that it can be accurately levelled up before tightening in position. The needle is so thoroughly well damped as to justify the makers' use of the term "dead beat," and it does not flicker, being as immune from acceleration or road vibrations as any instrument can be. It is designed to work at any lateral angle up to 40° , so that it is quite legible when the owner is in his riding position, and a variety of dials can be obtained. The makers supply a book of graphs from which—with the aid of a speedometer—it is possible to work out the approximate horse-power which the engine is developing on a given hill. The gradometer is thus a very fascinating toy, and of real value in tuning up an engine, besides satisfying our natural inquisitiveness about unknown hills.

Flywheel Lighting.

MANY of us felt a thrill of joy quiver up our marrows when Cyril Pullin announced that his forthcoming two-stroke would have a flywheel magneto, which also provided current for the lamps. Such a combination struck us as the essence of simplicity and cheapness; and it slew the main hoodoo of the utility "baby" machine (let me explain in a stage whisper that I mean *lamps*). I don't know how Mr. Pullin has been faring, but one or two of my friends who conceived a similar brainwave about the same period have experienced unco' difficulty in coaxing a flywheel magneto to give enough current for the two separate purposes. However, the other day, I ran into Mr. A. P. Young, of the B.T.H. He is always a cheery personage, but he was so exceptionally jovial on this occasion that I suspect his flywheel magneto is distilling all the juice he wants, and then some. I hope so.

A JOLLY FAMILY PARTY.

A Matchless tandem-seated outfit, the owner of which derives not the least of her pleasures in conveying her family from the stuffy city to the green fields. Sometimes the question is asked: "Why buy a big sidecar outfit when the price is so near to that of the three-wheeler or cheap four-wheeler?" The query is well answered here!

A Pessimist.

THE everyday definition of a pessimist is a man who wears a belt as well as braces. I met a motor cycling pessimist the other day. In fact, I discovered him by accident. He was mending a puncture, and when I stopped to see if everything was O.K., my startled eye fell on the contents of a small suit case—or should I say, a large *attaché* case—which lay open on his carrier. It contained more spares and tools than my entire garage—two valves, four sparking plugs, two complete chains, spare cover and tube, endless tube spanners, a hammer, several files, etc. I told him that I was touring with no equipment other than the makers' toolkit, one plug, one chain link, and a repair outfit. He looked positively shocked.

Utility Tyres.

ON a big machine tyres present no special problem in everyday business riding. You can make room for a pair of 3in. tyres on a $3\frac{1}{2}$ h.p. machine, and it is then long odds that you will ride punctureless for a whole year. Not so on the cheap babies, which many of us affect for business purposes. They often have 2in. tyres, with covers little thicker than a safety razor blade; and any self-respecting flintlet on the road can force such covers to emit a sickening hiss. In pleasure riding a puncture can be taken philosophically—it is at least an excuse for a pipe. But when you are riding hard to nip some big business before the other fellow gets in ahead of you, or when you are scorching home in the dark to keep tryst with Arabella, a tyre stop is the deuce and all. I haven't solved the problem yet. At present I have been driven to don the thickest 2in. cover going (it isn't really very thick), to fit a sheath inside it, and to add a self-sealing inner tube. This outfit is not proof against broken bottles, but it will at least keep out tacks and pins.

Magneto Lighting.

UNTIL somebody devises a specific term, I use the above crossheading to indicate those electric lighting systems which embody no expensive dynamo, but use the surplus output of whatever ignition device is fitted. I know I shall be accused of gross exaggeration, but I am going to say that a perfected outfit of this class revolutionises utility motor cycles, and constitutes just such another landmark in the industry as the advent of the spray carburetter or the high-tension magneto.

A Lady Motor Cyclist's Impressions of the Isle of Man T.T. Week.

B. M. LOCKWOOD TATH M.

Considering the number of ladies present at this year's Tourist Trophy races, a woman's impressions should be of great interest. The "mere male with a mechanical mind" might consider that the average lady would find little of interest in a spectacle of speed. Our contributor (who, by the way, is a Douglas resident) reveals that there are minor points which most men overlook. With men, machines perhaps come foremost; but with ladies the personal element takes first place.

Our contributor with her sketch book was a familiar figure in the enclosure, where she obtained the thumb nail impressions of T.T. personalities reproduced in this article.

and photographs will appear on the back page of the important dailies depicting the latest creations worn by important personages associated with the blue riband of the motor cycle world.

The Dominant Theme.

When the Editor of *The Motor Cycle* commissioned me to write my impressions of the T.T., I was sorely tempted to try to subordinate my interest as a motor cyclist, and to remember that I was just a woman

SINCE the Tourist Trophy races there has been so much talk of such things as overhead valves and gear ratios and other mysteries chiefly of interest to the engineer that one sometimes wonders whether the motor cycles skipped round the Isle of Man course without human assistance. Surely the riders had something to do with the victories?

Of course, we all appreciate that the event is organised by the Auto Cycle Union to assist the development of motor cycles, not of motor cyclists; but, as a woman, I cannot help thinking that the human element and the social side of the T.T. week is somewhat neglected. With so many ladies now reading *The Motor Cycle*, it occurs to me that the time cannot be far distant when the Tourist Trophy event will be likened to Ascot. By this I mean that, perhaps, we shall see in the papers some details of coming fashions; perhaps—and who knows?—mannequins will parade in the paddock,

Percy Butler—a former T.T. rider, and a well-known figure at important motor cycle events

An R.A.C. scout whose activities impressed our artist sufficiently for her to sketch him from memory.

with the average woman's interests. I find, however, that I am too much a motor cyclist, and, having met many of the riders and officials in my temporary appointment as *The Motor Cycle* artist, I find that, after all, the race comes first.

There were crowds at the start—on the grandstand, in the "paddock," and all over the road—about an hour before the race started. Riders in their businesslike, and sometimes quite gaily coloured kit were surrounded by well-wishers, including many charmingly garbed ladies, all anxious for a handshake and "good luck," and, in some cases, an even more effusive expression of good wishes. Lucky dogs!

But, poor boys, some of them were very nervous, and the last cigarette could be seen to tremble slightly between two fingers.

Clearing the Course.

Then came the "Clear the course!" and busy marshals hurried about with "Now then, please," and "Come along, ladies, hurry up now!" A rush was made for the grandstand, and competitors filed by to their appointed places with their trusty steeds. A little wait, and there was a flutter on the press stand, a shot, and the first rider was off.

Loud cheers came from the crowd when their favourite competitors started, and the grandstand buzzed with conversation as wagers were laid and chances discussed.

When the last man had started a string band burst forth into cheerful music, and was reinforced later by four gentlemen who gaily warbled

Mrs. Lockwood Tatham's impression of Clarence Wood—the Scott exponent.

Through Feminine Goggles.—

"Caroline" and other jazzy subjects, with a strong American accent and beautiful Odol smiles.

As the day wore on there came a more and more noticeable interest in the refreshment tent, where one heard much technical conversation, such as "Do have a bottle of bread and dripping, old thing!" between important people, who, away from the Island, are no doubt very sober-sided business and professional gentlemen.

It took me quite a long time to solve the mysteries of machines referred to as the "Flying Banana," "St. Vitus," and "The Organ." To the initiated, however, the long yellow tank of the Wooler makes the name appropriate, and Sun-Vitesse is more obvious. The "Organ" is very subtle.

Anyone who knows a Scott also knows that on changing gear the engine plays the first few bars of a well-known hymn.

By the way, why is it that people flock to a place where there is a reasonable hope of somebody crashing? Bloodthirsty brutes we are!

There were many amusing incidents at the grandstand as machines stopped at their "pits." It was wonderful to see the dive made by a diminutive boy scout to do his duty with a duster on number plates. He frantically polished one plate while his eyes remained adoringly on the rider's face, and his ears stuck out in the effort to catch the slightest word falling from the hero's lips.

I wonder what were the secret thoughts of the rider who, having retired very near the start, rode up to his pit on a lady's push bicycle and demanded to be filled up?

The Junior race got very exciting as it went on, and much interest was shown in the wonderful performance of Whalley on a Massey-Arran. He was among the lap leaders at the end of the fourth circuit, and it was awfully bad luck that he should burst a tyre on his last lap. He

Eric Williams, after his success in winning the Junior race.

Fully equipped for long distance riding. Lady motor cyclists who took part in a recently organised trial in Devonshire.

was running Eric Williams, the winner, very close.

Eric Williams's victory was a popular one. He was seized and "chaired" through the enclosure with a perfect army of photographers following and fighting for snaps. He was in the best of humour, chatting and laughing with everybody, but thankful to gain the comparative peace of the refreshment tent. But enthusiastic as his reception was, I do not think it came up to Howard Davies's on Thursday. There was something irresistibly humorous and very sporting about a little 234 h.p. A.J.S. taking the palm over the heads of all these wonderful big machines—even the "hush-hush merchants"—and it appealed to everybody. I think Davies was a little more exhausted than Williams, but he stuck his lionisation nobly.

Crowds of people went to Keppel Gate, Hillberry, Governor's Bridge, the Ramsey hairpin, and other "thrill spots," and they certainly got plenty of thrills! But everybody is much relieved that there were comparatively few accidents both during practices and the races. We were all very glad to see Alfie Alexander on the stand on Thursday after his smash on Tuesday. His eye was badly swollen and his arm in a sling. There is no doubt that his crash helmet saved his life. Whalley, too, had a nasty spill, and Olsson, Fairweather, Jones, Clarence Wood, Sutcliffe, Shaw, Thorpe, all came off rather badly, but, taking it all round, the casualty list was not large. Everybody, spectators, competitors, and officials seemed thoroughly to enjoy themselves, and we are looking forward to another exciting event next year.

I wonder what effect the victory of the A.J.S. in the Senior will have? It will be difficult to differentiate between Junior and Senior. I should not be surprised to see a three days trial for all comers, with the "sky the limit."

"A Welshman with an Italian name, a sunny smile, and a mop of fair hair"—C. Sgonina, who rode a Triumph.

Two more contributors to the problem of carrying spare bulbs. One reader cuts a short length off a dud inner tube, pops his bulbs into it, ties string round the tube between each pair of bulbs, and why, there you are, looking just like the python which crawled into the Sports Club at Rangoon and swallowed three footballs. S. Smith and Sons announce a special metal case, made for the purpose. Their

head tester has evidently had special experience; for they propose to design it for carrying three spare tail lamp bulbs, and no head lamp bulb, on the ground that the latter never gives trouble. I confess I have not had many head lamp bulbs go dud, but surely he would be a brave man who would try to ride from London to Manchester of a winter's night with no spare head lamp bulb?

IXION.

Some Comments on the Practice of Accommodating Two Persons on a Motor Bicycle designed for One.

centre of gravity is in the first place too far to the rear, the balance is affected somewhat adversely.

Now to approach the subject with an unbiassed mind it must be admitted that pillion riding has its risks like many another form of sport and travel, and if we consider the matter carefully we shall easily see that these risks vary greatly in individual cases; but in my opinion the risks are not so great as to be the subject of special legislation.

It is quite true that there have been accidents which might possibly not have occurred had the carrier been empty, and the presence of an extra weight in the rear may perhaps make just that small difference which exists between an accident and a narrow escape, but if due care is taken it seems to me that the risks are hardly worth considering.

The Necessity of Taking Care.

The taking of due care means, of course, a consideration of several matters. The combination of wet weather and rutty roads should be avoided if possible, so also should a passenger who will not sit still. Personally, I have never been troubled with sideslip or wobbling on good roads even when the weather has been wet. Corners should never be taken at a high speed, especially those round which it is impossible to see; partly because the extra weight in the rear makes it difficult to turn as sharply as might be wished, and partly because it is generally when turning a blind corner that the sudden emergency arises, and sudden emergencies are among the things to be avoided.

Further, the position of the pillion passenger has a considerable effect on the general stability of the machine. Some prefer to sit astride, others sideways, and there are riders who assert that each of these positions is the safer. It is certainly desirable that there should be some sort of rest for the feet, and long footboards, combined with the astride position, satisfy this claim fairly well.

Lastly, it is very clear that a spring seat, if properly designed and constructed, adds greatly not only to the comfort, but also to the safety of the passenger. It is, however, essential that the spring seat should have some lateral firmness, by which I mean that it must be so constructed that it cannot tip over sideways or drop at one corner. Such a seat, while possibly adding to the comfort and being fairly satisfactory where the astride position is adopted, must most certainly take from the security and steadiness of a passenger sitting sideways. Steadiness is important in more ways than one. First, a lack of it makes the passenger feel very insecure, and secondly, sudden movement on the part of the passenger is inclined to upset the steering and cause the machine to wobble.

MUCH has already been written on the subject of carrying a passenger on the carrier of a motor bicycle, and thus accommodating two persons on a machine which is built to carry only one.

A great deal of what has been said is simple nonsense. For example, I read, not long ago, a serious statement to the effect that when a passenger was carried upon the luggage bracket of a motor bicycle of the usual type, the centre of gravity of the whole conveyance, complete with its human load, was brought so far to the rear that it was in reality behind the back axle, and thus interfered considerably with the steering and general balance. That it would so interfere I am perfectly willing to admit, for the effect of such a displacement of the centre of gravity would be not simply to take so much weight off the front wheel that it would lose its power of steering and balancing the machine for lack of sufficient friction on the ground, but even to cause the front to lift in the air, stand on end, and, finally, fall backwards, and the drive of the engine would assist in this remarkable evolution.

An Argument Reduced to Absurdity.

Clearly this is so much piffle; for not only do we see motor cycles daily proceeding upon their way with two passengers on board, but a little calculation will show that the rear passenger who is capable of producing such a result must measure his weight in hundred-weights certainly, if not in tons, and although I have both friends and relations who are stouter than they need be, I have yet to meet the man or woman who can turn the scale at half a ton.

This statement, then, we may take as a piece of grotesque exaggeration, and dismiss it as absurd. Still, it is a fact that, on some machines where the

Pillion Riding.—

In America and Holland pillion passengers prefer to ride astride on a saddle, with footrests and pommel as safeguards.

STYLES OF PILLION RIDING.

No amount of argument will convince the experienced rider or the passenger that any particular method of pillion riding is the best. An ordinary cushion and a stout strap are considered by many to be not only the cheapest, but the best method, while others insist on fully sprung seats with footrests and backrest. It is a matter which often causes surprise that pillion passengers appear to suffer no discomfort from the use of a thin cushion, which, however, is more practicable when used on a spring wheel mount, such as the Wooler, depicted in the lower illustration. Despite the spring frame, however, we doubt the success of the lady's jumper knitting efforts except when posed for the photographer.

It is far cheaper to carry a pillion passenger than to fit a sidecar to one's motor cycle. This is a point of considerable importance to many, though it may not matter to the fortunate few. In the first place the cost of the sidecar—£40 or so—is saved, and in the second place the running costs are kept lower all round. As a sidecar imposes considerable side strain upon a motor cycle more power is required to drive it, and the tyres suffer more. More power obviously means more petrol and oil. Then again, under the new taxing arrangements, 20s. is saved in the cost of the licence.

Some little while ago a friend and I were running identical machines (3 h.p. Enfields) both in good tune. My friend fitted a light sidecar weighing about 70 lb., and found that up a certain main road hill of moderate steepness he was obliged to drop his gear even when the sidecar was empty, while I could carry a 140 lb. passenger on the pillion up this same hill at a fast pace without having to change down.

Young people, I find, are very fond of pillion riding; they say it is more sporting than sitting in a sidecar. But let us be fair—a sidecar is far more comfortable than a seat on the carrier. J.H.W.

AMONG THE ACCESSORIES.

An adjustable stop and a hollow cutter which does not clog are useful points about the Pennant belt punch. (The Pennant Manfg. Co., Ltd., Central Works, Watery Lane, Birmingham.)

Not only is the Nesthill a speedometer lamp, but it may be used to illuminate a route card, as an inspection lamp, or even in extremities, as a temporary head light. Standard pattern four-volt bulbs are used. (Ernest Hill, Ltd., Beta Works, 56, Broomhall Street, Birmingham.)

Simply a chain and padlock, the Dot thief-proof lock is marketed by Dunhills, Ltd., 359-361, Euston Road, London, N.W.1.

Two specially-shaped flat spanners have been cleverly designed to lock together in the manner shown and, with the addition of a padlock, to form a thief-proof wheel-locking device. (A. H. Hunt, Ltd., H.A.H. Works, Tunstall Road, East Croydon, Surrey.)

Where 30 seconds may mean the loss of the race, T.T. riders chose with care such items as chain punches. Weight and size are also important considerations, and as the Carlton rivet extractor weighs only six ounces, is but slightly larger than an ordinary belt punch, and is adaptable to any size of motor cycle chain, it is not surprising that it was carried by many competitors this year. It is sold by A. J. D., Ltd., Clay Lane, Coventry, for 4/6.

Foiling the motor cycle thief by locking the petrol supply is the aim of Boot's petrol tap lock. Only when the holes in the cones (in the sectional drawing) register is the petrol on, and this only occurs when the discs are in their proper combination. We shudder to think of the unfortunate owner who forgets the key letters! The inventor is Mr. G. H. Boot, 1, Berridge Road East, Nottingham.

Somewhat heavy for the tool-kit, but very useful for the garage where more than one chain size has to be contended with, this fully adjustable chain rivet extractor has just been introduced by Saxessories, Ltd., George Street Works, Coventry. Good features are the long tommy bar, the convenient handle, and the ingenious self-centring action.

For workshop use, the Elite valve-lifting tool, which, as shown, is adjustable to practically any engine, has much to commend it. Great leverage is provided by the long handle, while the lower link is self-aligning. It is the design and product of Mr. R. Ballingall, Motor Cycle Agent, Forfar, and is shortly to be placed on the market.

As the insulated portion is merely a taper fit in the body, only a sharp tap is necessary to dismantle the Over-all sparking plug for cleaning. Explosion pressure tends to keep the plug absolutely gas tight. (L. Dupont, 7, King Street, Cheapside, London, E.C.2.)

Consisting of a small finned aluminium casting, the O. and J. plug radiator protects the plug from moisture, and at the same time dissipates heat from the central electrode. (The Star Equipment Co., 9, Baronsmere Road, East Finchley Road, London, N.2.)

Quickly detachable rubber pads are used on the Massey-Arran footrests, which are mainly made of polished aluminium. (The Massey-Arran Motor Co., Bell Barn Road, Birmingham.)

A REMARKABLE 350 c.c. ENGINE.

Some Notes on the Engine that won both Senior and Junior T.T. Races.

Section of the T.T. A.J.S. cylinder head. The shapes of the head and gas passages are clearly indicated. Holes are drilled through the transverse web between each pair of cooling ribs.

defeating the pick of the world's 500 the Senior event. The performance naturally has caused considerable interest and curiosity wherever motor cycles are known, and it was with the object of ascertaining how much of the detail of their engine the producers were prepared to divulge that we approached Messrs. A. J. Stevens immediately after the race. The brothers Stevens were very frank as regards most of the important parts.

Not the Limit.

Possible because they realise that, though their marvellous little engine was good enough for this year's races, it will not be fast enough for the 1922 events, they are already at work on improvements and modifications. This is the right spirit to adopt, for though at the present moment the T.T. A.J.S. can hardly be considered a standard machine, the firm attach considerable importance to the lessons learned in their racing experience, and much of the knowledge gained by this means is used when designing standard productions.

At the beginning it may be said

The hollow trumpet valve and taper valve spring. The valve guide has six radiating ribs machined on the exposed end.

that the overhead valve A.J.S. engine contains few very startling features, but is the outcome of excellent design and careful experiment, and the results of this year's Isle of Man races are sufficient to prove that their win was no mere "fluke," but a performance that can be repeated with any similar engine, given a good enough rider.

A bore of 74 mm. and stroke of 81 mm. (3.49 c.c.), are the dimensions of the cylinder, which has

IT is now household news throughout the world that, in addition to obtaining six out of the first seven places in the Junior Tourist Trophy, a 350 c.c. A.J.S., ridden by H. R. Davies, succeeded in

inclined overhead valves. The engine, except for a double row roller bearing big end, has plain bearings throughout. Such in brief are the chief features, but those who desire to follow closely the

development of the petrol engine will require much fuller information. To begin then at the top. The overhead valves are inclined at an angle of 40° to the vertical, they are hollow and trumpet shaped, and are made from a special nickel chrome steel. Having a lift of $\frac{5}{16}$ in. the port diameter of each is $1\frac{9}{16}$ in. clear, and the stems work in separated cast iron guides. These guides are pressed into the cylinder head casting, and each has six cooling ribs formed on its exposed surface. The valve springs taper upwards, and are secured by light but sturdy spring cups and plain cotter fixings.

All rocker gear is carried by two steel plates, attached to either side of the cylinder head, and the inlet and exhaust rockers are interconnected by a powerful tension spring, which, by returning the rockers and push rods, relieves the valve springs from any duties other than closing the valves. Push rods of $\frac{7}{16}$ in. diameter and of very light gauge connect the rockers with the tappets, ball heads being formed on the tappets and rockers, and sockets being soldered into either end of the push rods. Adjustment is carried out at the tappets in a normal manner. Separate cams operate the tappets directly, and provide

the following valve timing: Inlet opens 15° early and closes 58° late, exhaust opens 50° early and closes 25° late.

Of cast iron and having deep vertical radiating fins, the cylinder head is roughly hemispherical in shape. It should be noted that the fins lie in the direction of the air current when the machine is in motion, and that the gas passages are carefully designed. A single steel bar used as a strap holds the head in position, turnbuckles with right and left hand threads being provided on either side for tightening down.

Section of the patented cylinder head joint, showing the inclined lower seating for the copper asbestos washer.

Valve side of the 2 1/2 h.p. A.J.S., showing operating mechanism and return spring for push rods and tappet gear.

A light steel piston, liberally drilled, and carrying four narrow rings, is a feature of the T.T. winner.

A Remarkable 350 c.c. Engine.—

In early days considerable trouble was experienced in obtaining a first-rate compression joint between cylinder and head, but after considerable experiment Messrs. A. J. Stevens designed and patented a simple form of joint wherein a copper asbestos washer is pinched between a flat and a taper face, and this construction has proved absolutely satisfactory. The cylinder itself is of cast iron, and is ground all over, both inside and out. Fins of $\frac{1}{16}$ in. depth and $\frac{9}{32}$ in. pitch extend from the top almost to the base, and both cylinder and head are covered with copper deposit before blacking. This is done with the idea of improving the cooling, but since the deposit is of no great depth it is doubtful if any great gain is effected in this way. Undoubtedly it is the admirable design and arrangement of fins on the walls of the cylinder itself, and more particularly on the cylinder head that permitted the little engine to average 3,400 r.p.m. for 226 miles. A steel piston with concave head provides a compression ratio of 5.5—1. This piston carries four narrow cast iron rings, and is liberally drilled. In design it is more or less normal except that the length is slightly less than the bore, and that it is machined from the solid billet; nevertheless its weight complete with rings and hollow gudgeon pin is no more than 12 oz. in all.

THE MEN BEHIND THE A.J.S.

From left to right, seated: Mr. A. J. Stevens, M.I.A.E., production manager; Mr. H. Stevens, M.I.M.E., A.M.I.A.E., senior managing director. On ground: Mr. G. Stevens, A.M.I.A.E., commercial manager; Mr. J. Stevens, jun., A.M.I.A.E., manager experimental department

Taper pins secure the gudgeon pin in its bosses, and the light H section connecting rod is bushed with bronze in the small end. From the small end the connecting rod tapers out to a considerable depth at the big end. A hardened steel ring is pressed into the rod and forms the outer race for two rows of $\frac{5}{16}$ in. rollers running on the crank pin.

Parallel at each end, the crank pin is secured to the 7 in. steel flywheels by fine threaded nuts, though the crank axles are secured by tapers and keys. Bronze bushes of $\frac{13}{16} \times 1\frac{5}{16}$ in. on the timing side, and $\frac{13}{16} \times 1\frac{9}{16}$ in. on the drive side, carry the crank unit, and, excepting that there is ample clearance between flywheels and crank case to prevent oil drag, no very special arrangements have been made for lubrication. Suitable oil holes are, of course, provided, but the foot-operated oil pump delivers directly into the crank case in a perfectly normal manner. A chain-driven Lucas magneto supplied the ignition, and the spark at full advance occurred 13 mm. before top dead centre.

It is worthy of mention that a new type of Renold chain, without rollers, was employed for the primary drive.

There is little need to mention the workmanship and general excellence of the A.J.S., since the results obtained speak for themselves.

THE INTERNATIONAL SIX DAYS TRIAL

FULL details are now available concerning the International Six Days Trial, which starts from Geneva on August 1st. So far as Great Britain is concerned the Auto-Cycle Union has nominated a team to rescue the valuable cup presented by the British Cycle and Motor Cycle Manufacturers and Traders, Ltd., to the F.I.C.M. from the holders, the Swiss Motor Cycle Union. This team is to be composed of Leslie Guy (Scott), H. S. F. Morgan (Morgan), and Eric Williams (A.J.S.), with as reserves Hugh Gibson (Royal Ruby), H. R. Davies (A.J.S.), and J. A. Newman (Sunbeam).

So as to give British manufacturers and riders a chance of entering for this interesting and instructive competition, the Swiss Motor Cycle Union have postponed the date of closing the entries until July 10th, at ordinary fees (which cost in Swiss money 300 fr. for manufacturers, and 150 fr. for private owners), and at double fees until July 15th. It is best to send entries direct to Mr. T. W. Loughborough, Secretary of the Auto-Cycle Union, 83, Pall Mall, London, S.W.1, who is also secretary of the International Federation

of Motor Cycle Clubs, under whose auspices the Trial will be organised.

Such a course as has been selected for this trial has never been chosen before for any competition. It takes the competitor round the whole of Switzerland, and includes the principal mountain passes, among which is the St. Gothard, which reaches an altitude of 2,112 metres (6,900ft.), descending to Lugano through an absolutely different type of country from what is encountered on the northern side. All the principal touring centres in the country are traversed, and practically the whole of Switzerland, except the cantons, which are forbidden to motorists.

The Swiss Motor Cycle Union has prepared an extremely interesting plan of the course with contours of the hills; and a most attractive programme, which describes each day's journey in detail, and is copiously and beautifully illustrated. One picture shows the zigzag road running to the summit of the Grimsel Pass. No fewer than eighteen hairpin corners are visible, each corner a comparatively easy curve and practically dead flat.

MID-YEAR MODELS.

Touring and Sporting Solo Machines and Sidecar Outfits.

ALTHOUGH autumn and Olympia Showtime sees the birth of the greater number of new models, there is at present "certain liveliness" amongst manufacturers—a hopeful sign considering the industrial situation generally. New designs are appearing under both new and old names to an unusual extent for this season of the year.

Proving its Merit.

The first of these is the new XL motor cycle, a machine embodying several interesting features, and which recently was subjected to an A.C.U. observed test from John-o'-Groat's to Land's End. Two standard models were entered—the first a 4 h.p. Blackburne-engined mount, and the other a similar machine equipped with a 4 h.p. J.A.P. engine. Pressed steel frame lugs are employed throughout, whilst the lower ends of the engine tubes are rigidly held by a sub-frame, which, in conjunction with a cross member at the rear of the engine, supports the gear box. The head is of sound design, and is reinforced by steel webs

Frame of the XL motor cycle, which is unusual in the construction of its rear and lower members: pressed steel lugs are used throughout.

between the top and bottom tank tubes. The possibility of whip in the engine-supporting tubes and the rear fork is greatly reduced by virtue of the incorporation of the additional sub-frame.

A gravity-feed lubrication system is employed, the tank being tapped at the base to receive a standard sight-feed lubricator. A non-return valve is located at the delivery end of the pipe, thus permitting the vacuum in the crank case to induce oil automatically. Pressed steel front forks, set at 60°, are fitted, while the tank, also of pressed steel, is of unusual shape, and has a somewhat deceptive appearance, being capable of holding two gallons of petrol and half a gallon of oil.

Semi-enclosed Transmission.

All-chain drive is employed, and the whole transmission is protected by cases of very neat appearance. Three screws only need be removed to release the plate concealing the clutch.

Another commendable feature is the provision of adjustable links on the footboards. The mudguarding is excellent; 6½ in. dome-shaped guards are fitted to both wheels. Voiturette (26×3 in.) tyres are standard, but the brakes, as employed on the model illustrated, will later

In some respects the XL is reminiscent of American design, e.g. the seat suspension, carrier, and mudguard stays

be substituted by a brake of the manufacturers' own design. A stand and carrier, both of flat-section pressed steel, are used, whilst a B.T.H. magneto is, in the case of both machines, mounted on an adjustable platform in front of the engine. The J.A.P. model is equipped with the new 85×95 mm. (539 c.c.) side-by-side valve engine, which, judging from our brief run, is possessed of remarkable acceleration and power. XL motor cycles are manufactured by the Excel Co., Norfolk Engineering Works, Worthing, Sussex.

A Single-speeder.

That there is still a good market for a single-speed lightweight is evidently the opinion of the Calthorpe Motor Cycle Co., of Barn Street, Birmingham, for this firm has just introduced a very neat-looking new model complying with this specification. And as Calthorpes have been making lightweights almost since the earliest days, they should be able to sound public opinion pretty accurately on this point.

The new model is most attractive in appearance, but is quite distinctive. All non-essentials have been eliminated from

the design, which, by its very simplicity, promises great reliability. The price will be 43 guineas.

Other Calthorpe models are (1) the 2½ h.p. J.A.P.-engined machine with an Enfield gear, which sells at 70 guineas (kick-starter £3 15s. extra); (2) the 3 h.p. two-stroke at 60 guineas (kick-starter £3 15s. extra); and (3) the 3 h.p. two-stroke sidecar outfit, which is supplied complete with a Maglita lighting set, at 105 guineas.

The Duzmo Revived.

Last year the Duzmo made quite a creditable impression during its brief appearance in the competition world, and the reintroduction of the 500 c.c. sporting solo model is a matter of some interest. The chief alteration in the design is the return to a splash lubrication system—previously a pump was located in the base of the crank case, and circulated oil through the engine from a sump in the crank case—oil being fed to the crank case by a Best mechanical pump, which is driven from an intermediary pinion between the magneto and timing pinions. The 3½ h.p. four-stroke engine (which has a bore and stroke of 88.9×79.2 mm.=491 c.c.) differs from the previous model in the combustion head and crank case design. Overhead valves are used, the casting round the valve pockets now permitting the passage of air between the two valves. The cylinder and head are held to the crank case by four long bolts, which pass through the radiating fins.

A two-stroke single-speed model Calthorpe designed to meet the demand of those who want the very simplest form of motor cycle.

An aspirant to honours in speed events at Brooklands and elsewhere—the 3½ h.p. Duzmo. The standard sporting model will have a direct belt drive.

The crank case and internal flywheels form new features; and the external appearance of the case has been greatly improved. Two rockers are operated by a central timing wheel, and the exhaust valve lifter is located in front of the timing case.

The standard sports model will have a direct lin. belt drive from an adjustable pulley.

A more attractive tank has now been produced, as may be seen from the illustration, whilst the straight-through induction and exhaust pipes, combined with a large and efficient silencer, give the machine a distinctly sporting appearance.

Near and off side pedals operate belt rim brakes above and below the rear fork tube, and curiously-shaped blocks of aluminium are screwed to the pedal proper, which bring the latter just beneath the heel when the foot is in the usual riding position.

Appealing to Speedmen.

For a sporting machine the mudguarding is good, whilst the price of £98 includes a tool kit, repair outfit, and pump. In addition to the 3½ h.p. model, the production of a 7 h.p. V twin sidecar machine is in progress.

The illustration above is of a special machine, which will be entered in the 500 mile race at Brooklands, and to which an especially large tank and a two-speed Enfield gear have been fitted to meet the requirements of this event.

Duzmo machines are manufactured by John Wallace, Cedar Road Works, Hertford Road, Enfield Highway, Middlesex.

A Powerful Solo Flat Twin.

To avoid an unusually long wheelbase the gear box of the new model Coventry-Victor is located beneath the rear cylinder of the 6 h.p. flat twin engine. Beyond this, there is little alteration. A Cox-

Only four tubes are used in the construction of the Wizard duplex frame.

Atmos carburettor is now fitted, and on one model we noticed an unconventionally-shaped induction pipe, which, it is claimed, gives very good results. Instead of being placed somewhere midway between the two cylinders the instrument is actually in the rear of back cylinder,

Novel Frame Design.

Originality in frame construction is exemplified by the Wizard motor cycle recently introduced by the Wizard Motor Co., of Rhondda, Cardiff. Here we have a machine following conventional outlines, but arriving at that end by unconventional means.

The idea behind the design has been to produce a motor cycle which would be easy to construct and assemble, with consequently a corresponding reduction of cost. The duplex frame consists of four separate tubes which are bolted to the steering head, and to the rear fork ends. Unit assembly of engine and gear box is employed, for these components are bolted to a steel plate cradle, which is completely dropped into a lower angle of the frame and secured by two widely spaced cross bolts, thus making for rigidity. Although this frame construction is not theoretically correct, its possibilities and the ruthlessly ingenious elimination of non-essentials show distinct promise. Simplicity is also the keynote of the front fork design, the "blades" being straight and having entirely enclosed springs. The appearance of the Wizard is quite neat.

By locating the gear box under the rear cylinder, the designers of the new Coventry Victor have considerably reduced the wheelbase.

A NEW TWO-STROKE.

The Product of an Old-established Concern.

A direct driven magneto is one of the features of the 2½ h.p. Liberty two-stroke unit.

Latterly, two-speed gear boxes, frames, hubs, and other components have been the firm's specialities, but a departure is now being made in the form of a thoroughly up-to-date 2½ h.p. two-stroke engine unit to be known as the Liberty.

Equal Bore and Stroke.

Having a bore and stroke of 70×70 mm. (269 c.c.), the engine is based on the three-port system, and has a particularly cleanly cast cylinder. The piston has a streamlined deflector, and is extremely light. Roller bearings are used in the big end, which works on a built-up crank pin carried between small crank discs or small internal flywheels. Plain bearings of ample size are used for the mainshaft, and the large outside flywheel has provision on the boss for either a pulley or sprocket.

Amongst details to be noted are the concealed passage from the release valve to the exhaust port, and the special bracket which carries the magneto on the side of the crank case. The drive is taken directly off the crankshaft.

The unit is to be sold complete with engine plates, silencer with tail pipe, and Runbaken magneto. A carburetter is not

Section of the Liberty two-stroke unit, manufactured by A. W. Wall, Ltd. The cylinder dimensions are 70×70 mm. (269 c.c.)

supplied, but the makers recommend the Cox-Atmos as being most suitable. We had a short run on a machine fitted with the Liberty engine, and found it to be smooth in operation and lively. At very slow speeds some little amount of four-stroking was noticeable, but with the least load on the engine the firing was as regular as could be desired. The firm of A. W. Wall, Ltd., should well uphold its prestige with the Liberty unit.

FOUR-STROKE LIGHTWEIGHT SIDECARS.

Two New Royal Ruby Outfits of the "100 Guinea" Class.

A sidecar outfit that will appeal to the economist in original cost, petrol consumption, and general upkeep, the 349 c.c. four-stroke Royal Ruby, marketed at 107 guineas. Above is the sidecar of the 98 guinea outfit.

THERE are very few lightweight outfits available for those who prefer the four-stroke engine, and the Ruby Cycle Co., of Moss Lane, Altrincham, have filled this gap by the introduction of two new models.

Engined with the Royal Ruby 2½ h.p. engine of 349 c.c. (74.5×80 mm.), the motor cycle part of the outfits is practically the same as the solo sports model, but the sidecars differ to some extent. One has a side door and a body conforming to accepted ideas of what a touring sidecar should be, and the other is on sporting lines.

As the weight of the motor cycle is under the 200 lb. limit, the taxation on either of these outfits is, of course, only £2 10s. Incidentally, the weight of the sporting sidecar is 65 lb., and the touring type 8 lb. extra. It should also be mentioned that the machines are manufactured throughout (including the gear boxes) by the Ruby Co., and are finished in the characteristic colours of black, ruby, and gold; the Royal Ruby adjustable laminated spring front fork is, of course, incorporated in the design. The prices are as follows: Sporting outfit, with two-speed clutch and kick starter, 98 gns.; with three-speed, 103 gns.; touring outfit, 102 gns. and 107 gns.

ROAD RACING IN FRANCE.

Motocycle Club de France 183 Mile Grand Prix at Provins won by an A.B.C.

The winner of the Grand Prix Motor Cycle Race, held last week at Provins, crossing the finishing line after riding 183 miles at an average speed of 53 m.p.h. His mount is a French built A.B.C.

NAAS, riding a 500 c.c. A.B.C., won the "Grand Prix" motor cycle race at Provins last week, after a most keen contest, his average for the 183 miles being 53 m.p.h. The race, which must not be confused with the national Grand Prix, to be held at Le Mans on the 24th of this month, was run under the auspices of the Motocycle Club de France, and was open to 250, 350, and 500 c.c. machines. There was a simultaneous start for each class; but, as there were only three in the 250 c.c. section and two in the 350 c.c. division, real interest lay in the 500 c.c. mounts, of which eleven started.

Keen Rivalry.

Competition was exceedingly keen, particularly between the Alcyon, Peugeot, and A.B.C. teams; and, not until the beginning of the last of the sixteen laps, could the winner be forecasted with any degree of certainty. For a time it looked as if the real struggle would be between Alcyon and Peugeot. The Peugeot is a vertical twin, the two cylinders being set very close together, and the eight overhead valves being operated by two camshafts with a train of pinions. The general features of the valves and valve-operating mechanism are similar to those of the well-known Peugeot racing cars. The Alcyons, on the other hand, are V twins, with a couple of overhead valves inclined in the head of each, and operated by push rods and rockers. The Griffons are also overhead valve twins, while the A.B.C. machines were practically standard productions.

At the end of the first lap, Naas, who was looked upon as the crack rider for the A.B.C., came in excitedly, and asked for a cylinder head joint. No such article existed at the pits, but a man was sent post haste to Provins to get what was required, while Naas, after grumbling considerably, changing a plug, and looking over his machine generally, went away and rode hard without another stop. The man who had run four miles under a broiling sun to get the washers, came

back and then fell utterly exhausted, while the washers he had brought lay unrequired on the bench.

Jolly (on an Alcyon) led at the beginning, with Benoit (Peugeot) a close second, and Desvaux (Alcyon) an equally close third. All the machines having been sent away together, it was a very easy matter to keep a check on their positions in the race. The Peugeot-Alcyon duel continued with slight changes for nearly half the distance, when Gillard (Peugeot), who had been running second, retired with broken timing gear. Peau was delayed by punctures, and Desvaux (Alcyon) and Naas (A.B.C.) came to the front.

Desvaux's blue Alcyon was leading when, on the hairpin turn near Provins, the rider discovered he was out of fuel. Desvaux, who would have been a wonderful recruit for the Lifeguards, lifted up his machine, and shook it to assure himself that the tank really was empty, then ran back to the main grandstands—a distance of a mile—to get a can of petrol. Meanwhile, Naas, another giant, had been driving hard, and, by reason of this incident—for the Alcyon man lost eight minutes—had no difficulty in getting into the lead. Desvaux was soon in action, but had to be content with third place behind his team mate Jolly.

Good Team Work.

Barnard (on an A.B.C.) came in fourth, with Bartlett (an Englishman) fifth on the same make of machine. Peau, the Peugeot crack, only finished sixth. The full A.B.C. team finished, and one of them made the record lap at an average of 61½ m.p.h. Bartlett ran with considerable regularity, notwithstanding the fact that his automatic oil pump broke early in the race, and that his jets were sucked up into the carburettor manifold.

The 1,000 c.c.-sidecar race was won by André on a Harley-Davidson, followed by Bache on an Indian, with another Indian in third place. Three Orials ran in the 600 c.c. class, and, although there was no outside competition, the men

fought among themselves, Guignet winning over his team mate Moret with the advantage of less than a length. Results:

A BUSY MONTH FOR COMPETITION RIDERS.

JULY is always a busy month for competition riders, but this year there is a particularly full programme. Opening with the Arbuthnot Trophy two-day trial and the 500-mile race at Brooklands, the schedule of events contains many important trials in various places.

To-day (Thursday) the Essex County and Southend A.C. and Essex M.C. Club hold their joint speed trials.

On Saturday there are the St. Andrews speed trials, as usual preceding the Scottish Six Days Trial, which starts from Edinburgh on Monday. Saturday next (the 9th) is also the date of the Cardiff and Associated Clubs' open hill-climb, while the following Saturday the Ilkley Club will hold its annual trial under conditions which are perhaps the nearest approach to those prevailing on the frontiers of the Empire. Then on Saturday, the 23rd, the East Midland Centre A.C.U. is to hold its open speed trial on the eve of the Grand Prix at Le Mans.

The month concludes with an open speed event to be organised by the Newcastle and District M.C.

In addition, of course, there are the usual number of week-end club events.

CLUB NEWS

Featherstone and District M.C.

Mr. J. W. Hemingway, Traveller's Hotel, Purston, near Pontefract, is the secretary of this newly-formed club. There is already a membership of forty.

Westbury on Trym A.C.

A new motor cycle-club, as above, has been formed. Mr. J. E. Skellern, of 310, Southmead Road, Westbury-on-Trym, is the secretary.

Wallington and District M.C. and L.C.C.

The recent night trial attracted fifteen entries. The start took place from Woodcote Green, Wallington, at 10.30 p.m., the first man away being Capt. L. F. Peaty, who was mounted on one of the new Hawkers; R. A. Green, who figured on an Ivy in the T.T., was riding a B.S.A. sidecar. Result:

1, Capt. L. F. Peaty (Hawker), 4½ m. error; 2, G. H. Symonds (Levis), 6½ m. error; 3, R. A. Green (B.S.A. sc.), 10 m. error.

Kidderminster M.C.C.

For the third time the Kidderminster Club has availed itself of the kind permission of Mr. Brown-Westhead to use the drive of Lea Castle, Wolverley, for its annual speed trial. Considering the

drive is only a quarter of a mile in length, thus making a standing start necessary, no very fast times could be expected. The event was quite a success, there being about forty entries. It is interesting to note that, while some good times were put up, they were not quite good enough to beat those put up in 1913, when at least three of the winners were on single-gear machines. Results:

CLASS 1 (Sidecar Machines, Unlimited Capacity, on Time).—1, F. Adam (3½ Norton), 24s. = 37 m.p.h.; 2, F. W. Giles (2¼ A.J.S.), 25s. = 35 m.p.h.

CLASS 2 (Solo Machines up to 350 c.c., on Time).—1, F. W. Giles (2¼ A.J.S.), 24s. = 36.5 m.p.h.; 2, G. Hemingway (2¼ A.J.S.), 26s. = 34 m.p.h.

CLASS 3 (Solo Machines up to 600 c.c., on Time).—J. G. Nickson (3½ Douglas) and F. Adam (3½ Norton), 21s. = 42.5 m.p.h., tied. Re-run, when Nickson proved the winner.

CLASS 4 (Solo Machines, Unlimited Capacity, on Time).—1, F. W. Giles (2¼ A.J.S.), 21s. = 42.5 m.p.h.; 2, J. G. Nickson (3½ Douglas), 22s. = 41 m.p.h.

For comparison, the fastest and second fastest times of day in 1913 over the same distance were as follows:

FASTEST TIME OF THE DAY.—S. Wright (3½ single gear Premier) and J. G. Nickson (3½ Rudge Mult), 19s. = 45.5 m.p.h., tied.

SECOND FASTEST TIME OF THE DAY.—H. Greatwich (6 single gear Wright) and H. C. Rhodes (3½ single gear Premier), 20s. = 44 m.p.h., tied.

Hartlepool M.C.

In spite of the severe thunderstorm which raged until within an hour of the start, the reliability trial on the 26th ult. attracted twenty-three entries. Limber Bank was observed and accounted for all the entries but eight. Results:

1, Cyril Walker (8 Rover); 2, J. Petch (7 A.J.S. sc.); 3, J. Charlesworth (7-9 Harley-Davidson sc.).

Bath and West of England M.C.

A successful half-day reliability trial was held on June 25th over a stiff course around the hilly district of Bath.

The prize list for this trial was exceptionally good, and was augmented to the extent of a silver vase and a Brooks' saddle, presented by the Manufacturers' Union. These, with a prize (value three guineas), given by Mr. Austin Speed, were put up as awards for amateurs. Results:

BEST PERFORMANCE OF THE DAY (the Fery Cup and replica).—I. E. Gunning (4 Norton). AMATEURS.—1, C. B. Newman (3½ Douglas); 2, A. C. Sheppard (3½ Sunbeam); 3, F. D. Butcher (7-9 Harley); 4, A. B. Fuller (2¼ Douglas); 5, C. W. Greenwood (4 Triumph); 6, J. Carver (5-6 Rover).

TRADE AND EXPERTS.—1, E. Colmer (2¼ Levis); 2, V. Anstie (3 A.B.C.); 3, A. E. Sims (4 Norton sc.).

Special prize given by Mr. E. G. Fery for a very good performance, but attended with bad luck, goes to G. O. Seampton (4¼ Dunell sc.).

A meet of members of the Doncaster M.C.C. prior to a recent run. Such a big gathering denotes an enthusiasm which augurs well for the continued success of this go-ahead Yorkshire Club.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

THE T.T. RACES.

Sir,—On asking several friends their opinion of the result of the Junior T.T. their reply, in every instance, was to the effect that, though by no means surprised, they were very far from satisfied to have such special machines "sweep the board." That is just my own view of the affair. One is advised (see advertisements) to purchase an A.J.S. for speed, power, and reliability; but have the makers really so little confidence in this speed, power, and reliability that they have to produce such special machines for the T.T., the very race that should be regarded as a proof of the makers' claims for their standard bicycles?

I do not expect the competing machines to have touring bars, footboards, and lamps fitted, but let the alterations to the standard bicycles be such as any private owner can effect. Surely this is only fair.

H. G. KELLEY.

CARRYING SPARE BULBS.

Sir,—Re "Ixion's" appeal for information as to how to carry spare bulbs, the method I have employed may be of interest. I had a wooden box made to fit on the carrier stays of my 4 h.p. Triumph, replacing the usual pannier bag. This was divided into two compartments. The front and larger compartment housed three S.G. two-volt accumulators, while the rear and smaller compartment had two S.B.C. holders with bases screwed to its back wall. These held the bulbs securely and obviated all packing. Portarlington.

Showing "H.L.R.'s" accumulator and spare bulb case, which he substituted for one pannier bag on his Triumph.

H.L.R.

COMPARING THEORETICAL AND PRACTICAL PERFORMANCES.

Sir,—As an old reader of your valuable paper, there is no more interesting page to me than "Questions and Replies."

I am all out for efficiency and take great interest in my 2½ h.p. Villiers two-speed O.K. 1920 two-stroke.

I have read all sorts of hints as to petrol economy, but have never seen a technical reply on the theoretical petrol consumption of motor cycles. By this I mean, assuming a well-known brand such as Shell, giving a definite number of B.Th.U. per gallon, given the most effective air mixture, at a speed, say, of 20 m.p.h., what mileage would a machine like mine give? One could then proceed to eliminate the theoretical for the practical, but I suggest such information in tabular form, giving (1) theoretical mileage of well-known machines, (2) best practical performance under official super-

vision, (3) makers' guarantee, and (4) what the average rider should attain, would be of immense value to those of us who wish to get the best possible out of our mounts.

We hear so much about "tune." Can someone give us a definition? Why not state what steps were necessary to give such results, as shown last year by a Levis fitted with an Amac carburetter, giving in one case over 200 miles per gallon and in the "twin" machine over 300? Why this huge difference? It seems to me manufacturers are letting themselves down, as an amateur can rarely get over 100 miles per gallon in every day work.

Do give us more information as to what we (the average riders) can do, rather than expert official tests which tell us nothing in the long run!

C. G. VOKES.

[Our reader's desire to know "what the average rider should attain" is a natural one but somewhat difficult of gratification, for much depends on extraneous conditions, such as the rider's method of driving, and especially the nature of the road upon which the test is to be carried out.—Ed.]

DANGERS OF HUMP-BACKED BRIDGES.

Sir,—The recent letter by "Longjump" left me regretting that his forks only went through his lamp, for a cyclist of his stamp is a continual danger to his fellow-beings. Any one knows that hump-backed bridges are a great deal worse than blind corners, for they are all exceedingly narrow, and to take one at the speed which resulted in such a jump (even allowing for exaggeration) is not sporting nor plucky; it is pure idiocy.

Had a car been taking it from the other side when he made his "magnificent" jump, what would have happened? Dunfermline.

TAKE A LOOK.

SIDECARS FOR DISABLED DRIVERS.

Sir,—I also have lost a leg about 7in. from the hip (left). I ride a 1920 5-6 h.p. James outfit with hand clutch. I always wear my artificial limb when riding, and use the ordinary saddle without inconvenience. This machine as standard had the brake on the left-hand side (this is what "1914-1919" wants); but Messrs. Godfreys changed it to the right-hand side without any trouble. The kick-starter is easily used, either from the saddle or standing. "1914-1919" would probably find a machine with the starter on the left more convenient, e.g., Douglas. Shall be pleased to furnish any further information.

PH. BROUGH.

FROM A MECHANICAL ENGINEER'S POINT OF VIEW.

Sir,—Referring to the letter of "Draughtsman" in a recent issue of *The Motor Cycle*, he does not say if he will enclose his cranks in cases, or design a special suit of untearable overalls. And he evidently does not know that there are shaft drive motor cycles on the market to-day. Again, if he was a practical man, he would know that broken propeller-shafts are known on cars; and as regards the number of cases of broken chains, these occur mostly, in my experience, with the people who expect a chain to function indefinitely and without attention, and then grumble when it eventually gives up. And he finishes his letter with the remark that two-stroke design is "a colossal example of sheer blind copying." Can he explain the duplicity of the Scott and any other two-speed two-stroke?

A PRACTICAL MOTOR MAN.

Blackburn.

MAXIMUM SPEED OF THE TRIUMPH.

Sir,—I hope you will forgive my spoiling your interesting correspondence pages by returning to a subject which many of your readers must be familiar with, but "Relkeub's" last letter is irresistible. If his experience has been that most Triumphs will not do 50 m.p.h., it is only fair to the "daddy of motor bicycles" for those whose experience has been the other way to let the world know it. I have had two recent date countershaft Triumphs, each of which I have kept a couple of years, and you should see the present one smile when I showed it "Relkeub's" letter! I was not a D.R., and have no special skill or assistance in tuning, but both would do 50 m.p.h. in a few seconds almost, and on a good road get near 60 m.p.h. I have no reason to believe my speedometer is wrong. The gear is $4\frac{1}{2}$ to 1, a suitable jet, etc., being understood.

At present I get all this speed with the standard silencer, very substantial legshields, accumulators, etc.; total weight, about 285 lb., which is very heavy for a Triumph. But the weight and the legshields do not cause overheating. I myself weigh 195 lb.

MOTOR TRAMP.

Birkdale, Lancs.

Sir,—I have read with great interest the discussion concerning the speed of the 4 h.p. Triumph. I have owned one or two of these machines, and the maximum speed that I have ever obtained from one of them as standard was 56 m.p.h. (timed over a quarter of a mile, and with a 4.6 gear).

In reply to Mr. Hartley, I would like him to know that my present machine, which is the one I used in the inter-Varsity and other events during the last year, is by no means standard now. The main alteration is a high compression engine, obtained by means of a new light single ring piston. With this the machine once touched close on 66 m.p.h., and it is still giving excellent service, after nearly 12,000 miles hard running.

In conclusion, I should like to state that I am sure the 4 h.p. Triumph was never designed for speed, but as a dual-purpose machine, to be used purely and simply as a reliable touring mount. As this it stands pre-eminent among present-day motor cycles.

C. MOSER.

Sir,—With regard to Mr. C. H. Stephenson's letter concerning the chain-driven Triumph in your issue of June 23rd, I must, as an owner of one of these excellent machines, write a few words with regard to his criticisms.

It is hardly understandable that a motor cyclist, and I conclude that Mr. Stephenson is one, could write in such strain about the Triumph gear box. He mentions that it is

impossible to change down without lifting the exhaust. I wonder whether Mr. Stephenson has found such a lever on his handle-bar as a clutch lever? It is possible, yet certainly not advisable, to change down without declutching or lifting the exhaust. It is ridiculous to say that it is impossible to change into neutral from any gear without stopping the engine first when the machine is stationary. For the machine to be stationary when its engine is running it must either be in neutral or have its clutch out, and, with its clutch out, any gear, including neutral position, can be obtained by operating the gear lever.

I am glad that Mr. Stephenson has found out that to obtain neutral position, when stationary, "the idea of lifting the exhaust is hopeless."

When using the exhaust to change down the action is only momentary, and is too quick to cause any check in the acceleration of the machine.

The paragraph on the gear ratio is certainly very humorous. To say that the top ratio of $4\frac{1}{2}$ to 1 is "too low for comfort" is certainly extraordinary. It is only by having a very efficient push drive on a chain-driven machine that such a high ratio can be used. I certainly do not recommend a higher ratio, or comfort will be a thing of the past on Mr. Stephenson's machine.

With reference to the other items he mentions, the chain drive is a wonderfully efficient job on this machine. There is no snatch at all at low speeds. It is certainly as sweet as a belt-driven machine. The chain case is very good.

My machine has completed over its first 1,000 miles, ridden just as it was delivered to me. I have had no need to touch the engine with any tool for any mechanical fault yet. With the makers' setting of the carburetter it does 95 m.p.g., and I have had 54 m.p.h. from it according to my Bonniksen speedometer, which, I think, can be trusted when speed has to be measured by an instrument.

Should Mr. Stephenson's gear box be mechanically wrong, it is certainly unfair of him to criticise it in print, for there is no doubt that the Triumph gear box is an excellent piece of work, and certainly one of the best, if not the best, on the market.

I have no connection whatever with the Triumph Co. beyond being a very satisfied user of their excellent production.

H. HEATH.

WHERE ARE THE SPRING FRAMES?

Sir,—As one travels about the country, one cannot fail to notice how few motor cycles are fitted with spring frames.

I should like to have some of your readers' opinions and reasons as to why they do not ride spring frame machines.

Saxmundham.

OLD TIMER.

ALL OPERATIONS BY HAND.

DAMAGE TO ROADS.

Sir,—I have followed with interest the articles published in *The Motor Cycle* headed "Damage to Roads," and should like to express my opinion also in your valuable paper.

As a motor cyclist, I have been appalled at the actual amount of damage which a heavy steam tractor drawing two or three large trucks really can do on a smooth Tarmac surface road. Recently I was riding from Stonebridge to Castle Bromwich—a road which is really too good for heavy haulage vehicles—when I observed a huge steam engine coupled to three heavy trucks running towards Stonebridge. The deep indentations caused by the straked driving wheels on the Tarmac, and the badly cracked surface of the wagon tracks, were sadly visible for a long way towards Castle Bromwich.

Even a road such as from Sutton to Tamworth has been rendered almost unsafe for a rider on a motor cycle, and this road no doubt has been carrying heavy vehicles for a long time.

Could not a special set of roads be set apart for these road trains, and then leave us lightweight motorists at least a few decent surfaces to ride on? DOUGLAS RIDER.
Erdington.

AIR-COOLING OF MOTOR CYCLE ENGINES.

Sir,—Air-cooling of motor cycle engines appears to be a much discussed subject at the present time, and no doubt, judging from the articles which have recently appeared in *The Motor Cycle*, there are various opinions regarding the subject.

A knowledge of air-cooling is more or less a knowledge of air currents, and, having had some experience in the latter, this enables me to express the following views.

The efficiency of air-cooling depends directly on the amount of cold air brought into actual contact with the outer surfaces of the cylinder. These air currents take away the heat by convection. If air currents are absent, we depend on radiation, and it is obvious that this method must retard cooling.

As pointed out by Mr. Granville E. Bradshaw, the air-cooled engine of to-day is almost identical with those in vogue eighteen years ago, and the same methods of cooling obtain. Further, it was an established fact, from experiments carried out about that period, that air-cooling was not as satisfactory as it could be. It was proved that the rear, or leeward side, of the cylinder attained a much greater heat than did the front, or windward, side. This difference varied over 100° on the Centigrade scale. Only recently I was informed that in aero engines it is possible to see hail or snow clinging to the front, whilst the rear is red hot, and probably some of the readers of these lines could say whether this is an actual fact. This means that the front temperature is below 0° C. (32° F.), whilst the rear heat is over 500° C. (932° F.). A little calculation shows that the variation in expansion must be excessive when this prevails.

It is easily understood, therefore, why the question should be asked, "Is air-cooling satisfactory?" The answer is evidently in the negative. The next question follows, "Why is it unsatisfactory?" and I believe the following explanation will be endorsed by thinking men.

Taking the ordinary type of vertical cylinder, when this moves through the atmosphere either at one mile or 100 m.p.h., a flow of air is set up against the front of it. This creates side currents which flow to the rear and there strike against each other. Now, before impinging against each other, they have left actual contact with the rear portion of the cylinder walls, and, moreover, each side current has set up an eddy current in the reverse direction. These two eddy currents remove air from the immediate rear of the cylinder, with the nett result of a reduced atmospheric pressure or partial vacuum behind and down the centre of the cylinder.

Now, as previously stated, an air-cooled cylinder depends primarily on convection of heat by air currents in actual contact, and to a much lesser degree on radiation. We therefore get the former at the front and sides, due to air currents under a more or less increased pressure, whilst at the rear, where we have a rarefied atmosphere, we depend on radiation. To make the point more clear, I may say we have at the rear of the cylinder exactly the same principle as obtains in the Thermos flask, and its action is proportional to the velocity of the prevailing air currents.

Having briefly described what takes place behind a vertical cylinder, no doubt the following method of overcoming the defect will be appreciated.

Around the rear of the cylinder and inside each pair of fins is fixed (what I have named, for obvious reasons) an "antivac" (see sketch). This leads each side current to the rear, where it strikes a plate A, and is deflected outwards. Each current also induces its adjacent current, and thus promotes the flow of air around, and in contact with, the cylinder walls, with, consequently, increased cooling effect.

Apart from the cooling effect of the antivac, there are two other incidental advantages, one of which is a reduced wind resistance, due to the disappearance of negative pressure in the rear of the cylinder.

The other advantage is the reaction set up by the issuing air currents on the back of the cylinder.

As regards the invention, I believe it will be found most effective from every standpoint, and will tend to fulfil the requirements as set forth by Mr. Bradshaw where he states, "We must have adequate cooling draught, and in the right place if we are going to stick to existing types."

The antivac is made from aluminium, and easily fixed to most types of cylinders. When fixed in position, it is not easily seen, and requires no further attention. It is always effective at any velocity, and, when stationary, does not detract from the ordinary cooling efficiency. It is unlike the ordinary baffle, inasmuch as it merely leads, or diverts, the air, and, consequently, sets up little wind resistance.

In conclusion, I would like to point out that the position of the cylinder with regard to windshield leg-guards, etc., is a factor which should be closely studied if air cooling efficiency is sought for.

THOMAS HOUGH.

Air deflectors between cylinder flanges, suggested by Mr. T. Hough.

SUMMARY OF CORRESPONDENCE.

Referring to a recent article by "Chinook," "Puzzled" (Manchester) comments on the difficulty of keeping chains at the proper tension when the limit of adjustment has been reached. He tried taking out half a link, but the chain was then too short.

BOOKS AND MAPS FOR MOTOR CYCLISTS

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM."		Price,	Book
The standard handbook on the motor cycle. It deals with every part of the machine, and with every type of machine, and will be found invaluable to all motor cycle riders. New Edition.		2/6	2/10
"TRACING MOTOR CYCLE TROUBLES"			
A system for tracing motor cycle faults and of remedying them when found. Fourth Edition		2/-	2/3
"MAGNETOS" By A. P. Young.			
A complete treatise on magneto ignition for motor cars, motor cycles, and aeroplanes. Second Edition		4/6	4/10
"TWO-STROKE MOTOR CYCLES."			
A reliable treatise on Two-strokes, from the rider's point of view.		3/-	3/3
"MOTOR CYCLE REMINISCENCES."			
By "Ixion," of <i>The Motor Cycle</i>		5/-	5/3
"THE MOTOR CYCLE" ROAD MAPS.			
Set of Three Maps—England and Wales, Scotland, London (showing roads into and out of London and avoiding London). Mounted on linen.		5/6	5/10
Set of three, complete in case			
Set of Two Maps—England and Wales, London (as above). Mounted on linen; set of three complete in case.		4/6	4/8
"THE MOTOR CYCLE" ROUTE BOOK			
With 32 pages of Road Maps of England and Wales, Scotland, and the London District		5/-	5/4

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd. 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

COASTING DOWN HILL.

Q Can I with impunity coast down hills in neutral with the throttle completely closed? If so, am I right in getting straight into top gear when near the bottom of the hill merely by decutching without touching the exhaust valve lifter?—H.P.

You will do no harm by coasting down hills with the engine shut off and the gear in neutral. The safest plan of re-engaging the gears is to start up the engine by means of the kick-starter before the machine comes to a standstill.

BENDING SIDECAR WOODWORK.

Q How do sidecar builders get the front of their sidecar bodies narrow? I have some pieces sawn with a downward curve, but I want to make it narrow at the front.—T.W.H.

The usual method of bending sidecar frame members is to steam the wood until it can be bent easily. When it has assumed the required shape, it is clamped so that it cannot spring back, and then dried. The process is one which you will not be able to carry out very readily yourself, and it would be best to get the work done by a coachbuilder.

CALCULATING GEAR RATIOS.

Q Would you kindly inform me of the correct method by which one can ascertain respective gear ratio, as in ignition and valve timing, and also regarding the pinions used on a lathe for thread-cutting? If you could let me know of a book dealing with the above subject thoroughly I should be much obliged.—A.H.C.

In the case of a gear reduction consisting of two wheels only, you merely require to count the number of teeth on each, and dividing one by the other will give you the ratio. In the case of compound drives such as you get in the screw-cutting gear of a lathe, count the teeth on all the driving wheels, and multiply these together. Then count the teeth on all the driven wheels, and multiply these; divide the products to find the ratio. Idle wheels, such as those used to change the direction of rotation or to bridge a space between a driving and driven wheel, may be ignored. Almost every engineer's handbook, mechanic's pocket book, etc., contains instructions in gear calculations.

A BROKEN GEAR BOX.

Q Could you give me any possible explanation of the following accident? I was out with my $4\frac{1}{2}$ h.p. Star, and, when approaching a level crossing (with the gates closed), changed down, meaning to get into low gear and go very slowly until the train passed. When I tried to put in the low gear from middle, a grinding noise arose as if the teeth had not meshed properly, so I stopped the engine. I restarted in the usual way, engaged low gear, and let the clutch in slowly. When the clutch was properly in, there was a bang in the gear box, and on examination I found the gear box case broken in several places: Taking the gear box down subsequently, I found the gears and teeth in perfect order, not a fault anywhere, yet something must have gone wrong.—M.L.

From your description we are unable to give a definite reason for the breakage of your gear box. As the gears themselves, however, are still in good condition, it would appear that some such part as a nut or bolt had been left inside some time when the box was dismantled, or that by some means two gears were engaged at once, and that, instead of breaking the teeth, the shafts were forced apart, thus cracking the box.

A queer looking little vehicle—the Lewis Sedan—built primarily for invalid use, is electrically propelled, and will, it is claimed, run about fifty miles on one charge of the accumulator.

A TWO-STROKE FOR A HILLY DISTRICT.

Q (1.) Which lightweight motor cycle has the lowest driving position (distance from saddle to ground)? (2.) Does a two-stroke consume a larger quantity of oil and petrol than the average four-stroke lightweight? (3.) Do you think a $2\frac{1}{4}$ h.p. powerful enough for all ordinary purposes in the Derbyshire districts? (4.) Would you advise me to get a chain drive or belt drive machine for solo riding only, my weight being nine stones?—J.A.B.

(1.) The average distance from the top of the saddle to the ground is 27in., or 28in. in the case of most lightweight motor cycles fitted with 24in. wheels such as the Connaught, Triumph, Levis, and Cedros. (2.) A small two-stroke engine usually consumes a larger quantity of petrol than a four-stroke of similar capacity, but at low speeds the power is generally greater. The average consumption of the above-mentioned machines is 80 to 100 m.p.g. (3.) A $2\frac{1}{4}$ h.p. two-stroke engine will answer all ordinary requirements if fitted with a two-speed gear. (4.) Chain-cum-belt or all-chain drive is to be preferred.

WEAK RUNNING OF TWO-STROKE ENGINE.

Q I have a $2\frac{3}{4}$ h.p. T.D.C. two-stroke motor cycle, which I cannot get to start. It is brand new, and timed with the piston pin. From top of stroke when the contact points are about to break with the ignition control fully retarded. When one tries to start the machine there are loud explosions in the silencer, but only slight firing in engine, which lacks power. Also there appears to be great leakage at cylinder joints and carburetter. Moreover when the plug is removed from the bottom of the crank case about half a pint of oil and petrol pours out.—J.M.

There should be no leakage at the joints between the cylinder and crank case, or between the two halves of the crank case itself. The latter joint should be remade, smearing the joining faces with seccotine. The cylinder base joint needs a thick brown paper washer, also coated with seccotine on both sides. The spark should occur when the piston is on top dead centre with the ignition fully retarded. Make quite sure that the piston is fitted with the deflector side nearest the transfer port.

MISFIRING UNDER HEAVY LOAD.

? My machine is a 1919 New Imperial (with 8 h.p. J.A.P. engine), to which is attached a heavy sidecar. I find that occasionally when pulling hard on hills on top gear the engine will misfire on one cylinder. When the summit is reached, if there is a slight descent, or even a level road, it will again fire correctly, and may not miss again for fifty miles or more. This trouble is not always in evidence, but the engine never misses except under load, and it will often climb the most severe hills without the suspicion of a misfire. As soon as I drop to second gear it immediately fires normally.—H.P.

The trouble may be due to one of the sparking plugs becoming overheated when the engine is heavily loaded; the misfiring at very low speeds may be due to an air leak either at the induction pipe joint or at the inlet valve guide.

MAGNETO TIMING.

? I shall be much obliged if you will kindly advise me as to the best ignition timing for the 1915 5-6 h.p. Indian (fused with heavy coachbuilt sidecar). The magneto is a Dixie, which I recently had occasion to send to the makers' depot for complete overhaul, and at the same time I lowered the top gear ratio from $4\frac{1}{4}$ to about 5 to 1. I imagine that this fact will allow of a slight ignition advance with some advantage, also considering that it is a long stroke engine 70×89 mm.; the original timing was rather late. I am still using the original setting with which the contact breaker points begin to separate at about $\frac{1}{16}$ in. from the top of stroke on full advance. On full retard they separate at $\frac{1}{16}$ in. down the firing stroke. The engine never knocks and has plenty of power, and will run dead slow on full advance. If I advance the ignition by only one tooth the firing point on full retard is $\frac{1}{16}$ in. or so before top of stroke, and on full advance about $\frac{1}{16}$ in. before. I have tried this for a short time on the road, but find that quite easy gradients require slight retarding, not because knocking results, but merely because the road speed rises perceptibly on retarding. Incidentally, on this more advanced setting the engine will not run half so slowly in neutral. Carburettor three-jet Binks, noted for excellent slow running possibilities. I should be glad to know whether you consider the latter setting too far advanced, as I do not wish to ruin the big end bearings, etc., by over-early ignition. I take it that the spark does not actually occur at the plugs until an appreciable fraction of time after the contact breaker points begin to separate, which will make the actual ignition point later than the moment of opening.—R.A.G.

The spark occurs when the points first separate. The ignition should be set so that the spark occurs when the piston is 10 mm. from the top of the compression stroke with the control fully advanced, or alternatively use the setting which we invariably recommend, viz., contact points just separating when piston is on top dead centre with magneto control two-thirds retarded.

Important Dates.

- Thurs., July 7th—Essex County and Southend A.C. and Essex M.C. Joint Open Speed Trials.
 Sat., July 9th—St. Andrews Speed Trials.
 Sat., July 9th—Cardiff M.C.C. and associated club: Open Hill Climb.
 Mon., July 11th, to Sat., July 16th—Scottish Six Days' Trial.
 Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.
 Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials.
 Sun., July 24th—Motor Cycle Grand Prix Race in France.
 Sat., July 30th—Newcastle and District M.C. Open Speed Trials.
 Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
 Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.
 Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.
 Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.
 Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.
 Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.
 Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.
 Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.
 Sat., Sept. 17th—Grand Prix Race for Cycle Cars.
 Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

VIBRATION AND LACK OF POWER.

? I have a $3\frac{1}{2}$ h.p. Humber motor cycle, which I think is a 1911 model. (1.) There is much vibration in the engine at anything over 20 m.p.h., yet the condition is very good: no loose bearings, and piston and rings are in excellent order. The engine is not loose in the frame. Is the piston too light or too heavy to cause this, or is it due to some other cause? (2.) The engine does not pull well, and overheats in three or four miles. Engine valve timing: Exhaust opens $\frac{1}{16}$ in. from bottom centre, and closes on top; inlet opens just after turning top centre, and closes a little up compression stroke. I have tried the exhaust to open earlier and later, with no better results. Also I have tried the magneto timing in all positions, but the trouble is still there. I have tried several different plugs, thinking that a faulty plug would cause preignition, as, in fact, I have had that trouble several times. The carburettor is a B. and B., No. 31 jet, which, I believe, has been enlarged a shade. I have tried a smaller jet, but it will not run at all on it. It now takes the air lever slightly in advance of the throttle lever, which leaves plenty in reserve for more air. The petrol level is nearly to the top of the jet. The machine starts away easily from cold, but in travelling the throttle is quite ineffective if opened more than half way.—H.P.W.

(1.) Excessive vibration may be due to defective engine design: possibly the reciprocating parts are not correctly balanced. We are inclined to think, however, that the trouble is accentuated

by the engine bolts being worn; the engine may appear to be quite rigidly fixed, but if you withdraw the bolts you will probably find that the holes in the engine plates are worn slightly oval, or that the bolts themselves are worn. (2.) All the adjustments appear to be in order, and it is therefore difficult to state the cause of the trouble without actually inspecting the machine. It would be worth while trying a larger jet, say No. 34, in order to find out if the opening of the throttle beyond half way will produce a corresponding increase in speed or power. If it does not do so, it is clear that the area of the inlet pipe or valve port is too small. Try a gear of about 5 or $5\frac{1}{4}$ to 1.

RECOMMENDED ROUTES**HALIFAX TO SEASCALE.—G.R.O.**

Halifax, Keighley, Skipton, Gargrave, Hellifield, Long Preston, Settle, Clapham, Ingleton, Kirkby Lonsdale, Crooklands, Milnthorpe, Heversham, Levens Bridge, Lindale - in - Cartmel, Newby Bridge, Greenodd, Lowick Green, Grizebeck, Broughton, Whickham, Whitbeck, Bootle Muncaster Castle, Holmbrook, Drigg, Seascale. Approximately 118 miles.

GREAT MALVERN TO WEYBRIDGE.—C.E.H.

Great Malvern, Wynds Point, Malvern Wells, Upton-on-Severn, Tewkesbury, Coombe Hill, Gloucester, Birdlip, Cirencester, Poulton, Fairford, Lechlade, Faringdon, East Challow, Wantage, Blewbury, Stratley, Basildon, Pangbourne, Purley, Reading, Wokingham, Bracknell, Ascot, Sunninghill, Egham, Staines, Chertsey, Weybridge. Approximately 124½ miles.

EAST FINCHLEY TO AXMINSTER.—W.G.F.

East Finchley, Hendon Station, Kingsbury Green, Kenton, Harrow-on-Hill, Pinner Green, Eastcote, Ruislip, Ickenham, Uxbridge, Slough, Maidenhead, Littlewick, Twyford, Reading, Theale, Newbury, Hungerford, Marlborough, Beckhampton, Devizes, Seend, Trowbridge, Southwick, Beckington, Frome, Nunney, Shepton Mallet, Wells, Priddy, Cheddar, Westbury, Glastonbury, Compton, Somerton, Langport, Curry Rivel, Hambridge, Puckington, Ilminster, Peasemars, Chard, Tatworth, Tytherleigh, Axminster. Approximately 192 miles.

SITTINGBOURNE TO CARDIFF.—R.M.

Sittingbourne, Key Street, Detling, Maidstone, Wrotham Heath, Borough Green, Ightham, Seal, Bat and Ball Station (Sevenoaks), Riverhead, Brasted, Westerham, Oxted, Godstone, Blethingley, Nutfield, Redhill, Reigate, Burgh Heath, Ewell, Surbiton, Kingston-on-Thames, Hampton Court, Hampton, Sunbury Common, Staines, Windsor, Eton, Slathill, Maidenhead, Henley, Nettlebed, Benson, Shillingford, Dorchester, Nuneham Courtenay, Littlemore, Oxford, Botley, Eynsham, Witney, Burford, Northleach, Andoversford, Cheltenham, Gloucester, Huntley, Lea, Ross, Wilton, Goodrich, Whitechurch, Symonds Yat, Monmouth, Raglan, Usk, Llangibby, Caerleon, Newport, St. Mellons, Cardiff. Approximately 235½ miles.

A NEW BIG TWIN.

Distinctive Features of the B. and H. Engine.

THE unusually large and unconventionally shaped aluminium combustion heads with which the new 10 h.p. V twin B. and H. engine is equipped are its most noticeable peculiarity, for they do not accommodate valve caps, and, in consequence, the size of the cylinders is deceptive.

The bore and stroke are 80×99 mm. (996 c.c.), and side-by-side valves of 1½ in. diameter are used. Many new and distinctly interesting features are incorporated in the design, for which one of the designers of the Metric engine is responsible.

The timing gear has a separate cam for each inlet valve, while one only lifts the exhausts; the latter is positioned nearest the cam wheel pinion and has a lift of 1½ in. The acceleration of the rocker is constant, whilst the device for raising the exhaust valves is exceptionally neat. Two pawls engaging a small shoulder on the exhaust valve rockers are lifted by a Bowden wire and hook. The former is carried in a tubular fixing in the centre of the timing case, and the latter lifts the ends of the pawls, and consequently the valves, via the tappets.

Adjustable Valve Stems.

The inlet valves are slightly offset in order that they may ride on the two cams respectively located on the outside of the timing wheel. An unusual procedure is the incorporation of the

tappet adjustment with valve spring retaining washer. This design permits the use of plain rods for the tappets.

The complete valve spring and tappet are enclosed in a telescopic cylinder, whilst the head of the valve is slightly concave.

Very careful consideration has been given to heat dispersion and the rapid expansion and exit of the gas.

The cylinder head is made with a number of cooling fins, which completely cover its surface, whilst air passes around both valve pockets located in the top of the cylinder.

The shape of the dome inside the head has been cleverly arranged to facilitate the passage of the gas both in and out of the inlet and exhaust valve pockets, respectively. Figures of interest are the diameter of the pockets. The inlet has a 1 in. diameter, whilst the exhaust is 1½ in. wide. The actual pockets, however, immediately around the valve heads, are 1½ in. in diameter.

Six bolts hold the head to the cylinder and are not continued to the crank case, thereby allowing for expansion.

The piston is fitted with two thin, deep rings. The skirt is, of course, grooved to assist the distribution of the oil.

An elaborate bearing layout is used—a most desirable feature—and it includes a

Detachable cylinder heads, which also give access to the valves, are one of the most outstanding features of this new 10 h.p. V twin engine.

double row of Hoffmann rollers for the big end, a roller bearing of the same make on the pulley side of the main shaft, and on the other side a Hoffmann ball bearing.

Gear-driven Magneto.

Two ball bearings are also used on the camshaft. It would be interesting here to mention that the magneto, which is bolted to a plate on the side of the crank case, is driven by a bevel and shaft from the cam wheel. In this position it is accessible and is protected by the large timing case.

Probably the most novel feature of this engine is the lubrication system. It

Side view of the engine showing timing gear arrangement.

Section of the power unit.

Plan view of the cylinder.

will be more readily understood if the path of the oil be traced from its tank. An oil lead from the usual type of drip-feed lubricator is connected to the front cylinder wall, where there is an annular groove. The piston, at the bottom of its stroke, descends sufficiently low to permit the oil entering the waist, from where

A New Big Twin.—

it is spread around the cylinder by the piston grooves. The surplus oil, however, drips into the crank case, and it is forced therefrom by pressure on the down strokes of the piston being carried *via* a ball non-return valve into a large annular chamber encircling the crank case.

Between these chambers, and in the faces of the crank case, is a groove connected by a small channel to the chamber.

Oil is forced into the groove, and thence *via* a small hole to the annular

grooves around the base of each cylinder. It would appear, then, that the front cylinder is overfed, or the rear under-supplied, with oil. This, however, is equalised by the splash from the flywheels and the big end, the front cylinder having a baffle, whilst the rear is open. Two drain taps are fitted—one for emptying the annular chamber and the other for releasing the waste oil in the crank case.

Other interesting notes would show that the valve spring tension is 45 lb., whilst the weight of the piston is 14 oz.

It is possible that experiments with aluminium alloys will be made at a later date.

The manufacturers, the B. and H. Engineering Co., Ltd., Napier Works, Napier Road, Ponders End, Middlesex, entered one of these engines fitted in a Zenith frame, for the 500 mile race at Brooklands. This really constituted a trial from which the makers hope to gain some useful data.

A limited number of engines will be available shortly.

ALL-STEEL FRAME CONSTRUCTION.

New Beardmore-Precision Models.

Weight and Price Reductions.

OUR acquaintance with the Sports solo model Beardmore-Precision dates from the first ascent of the Screw Road (near Carnarvon) by a party organised by *The Motor Cycle*. On that occasion the new model, which was still in its experimental state, performed admirably.

Engined with the now well-known 350 c.c. Precision two-stroke, the new Sports model, in its final form, differs in many respects from the original Beardmore-Precision, for it was decided that there was a large demand for a light, speedy solo mount to sell at a lower figure than was possible with the original spring frame specification. With Sturney-Archer two-speed gear, clutch, and kick-starter, the machine sells at £75; but it must be clearly understood that, in reducing the price, no inferior workmanship and material are employed—in fact, the construction throughout is scientific, and in many ways superior to that of higher-priced competitors.

No Frame Lug Castings.

Not a single casting is employed in the short compact frame, which, of course, embodies a steel tank in place of the two top tubes. Every lug is made up of steel pressings, the bottom bracket lug forming an admirable example of the general construction.

The component parts are welded together so as to form a box girder of

Lighter and cheaper than the spring frame model, this new sidecar outfit is fitted with the combined engine and gear unit with which the Beardmore-Precision first made its appearance

section admirably suited to the stresses imposed, yet without unnecessary masses of metal. Throughout, the frame is characterised by exceptionally sturdy construction; but, in spite of this, the machine weighs just under the 200 lb. limit, and is consequently covered by a 30s. tax. The flexible leaf spring forks of previous models are retained, but no rear springing is employed, and the wheel-base is consequently considerably shorter, 50in. being the actual measurement.

In detail we find the same careful consideration of production costs, without the slightest scamping of essentials. The brake pedal, for instance, is formed of

bent strip steel of ample section, and duplicated in the shank, a neat aluminium foot plate adding the necessary finish. Again, the carrier is formed of angle steel welded at the joints, and yet a third admirable feature is the pressed steel rear stand.

The whole machine is a good example of the manner in which weight and manufacturing costs can be reduced without detriment, and even with improvement to the machine.

A sports model Beardmore-Precision which is 70 lb. lighter than its spring frame forerunner—many of the features of which have been retained. A Sturney-Archer gear box is fitted.

No castings are used in the Beardmore-Precision frame construction. Above are seen the steel pressings which, when welded together, form the bottom bracket

Naturally, the Precision automatic lubrication system is retained.

Selling at £105 complete with Canoelet Minor sidecar, the sports sidecar outfit is slightly more elaborate. Except for the gears, which in this case are of the selective clutch type, and form a unit

All-steel Frame Construction—

with the engine, the layout is similar to that described above. The engine and gear assembly is already familiar to motor cyclists, since it has been exhibited at the last two Olympia Motor Cycle Shows, and is to be met on the road in considerable numbers. Having a 55in. wheelbase, this sturdy little passenger outfit has all-chain drive, and, in addition, is fitted with such luxuries as combined steel leg-shields and foot plates, a pressed steel silencer, and many little refinements. In spite of these, it is 70 lb. lighter than the spring frame outfit, and from our own experience we can state that it is handy and full of life on the

Strip steel brake pedal with aluminium pad is a neat feature of the sporting solo Beardmore-Precision.

road. During a short road test, the outfit, with an eleven-stone passenger, successfully negotiated Weatheroak Hill on the standard ratios of 6 and $11\frac{1}{2}$ to 1—no mean performance, as any Midland rider will be aware. The little engine responds quickly to the throttle, and will pull regularly and evenly down to a mere crawl before low gear is engaged.

Braking power is good, for, in addition to the countershaft brake, a large band brake is fitted to the front wheel, and this feature is common to both new models. $26 \times 2\frac{1}{2}$ in. tyres are fitted, and the performance of the machine is calculated to surprise many an owner of heavier sidecar outfits.

A New White and Poppe Two-stroke Engine.

A Small Engine produced by Pioneer Designers.

VISITORS to last week's Royal Agricultural Show at Derby will have noticed an interesting motor-driven mowing machine shown by Dennis Bros., of Guildford. The mowing machine is a wonderful piece of work running on ball bearings throughout, and being made on engineering lines. What is of greater interest to motor cyclists, however, is the neat little air-cooled two-stroke engine of $2\frac{1}{2} \times 3$ in. bore and stroke used to propel the machine. This engine is the product of the famous White and Poppe works, and we believe that we are correct in stating that in the near future it will form the power unit of a novel motor cycle. A cast iron cylinder, having ribs of $1\frac{1}{2}$ in. in depth and a considerable wall and head thickness, is of great interest in itself. The ports are particularly wide, and, in spite of the fact that a circular transfer passage is cast integral with the cylinder, every port is arranged in such a manner that it can be accurately machined.

Roller Bearings.

At the present time a cast iron piston is employed giving a compression ratio of $5\frac{1}{2}$ to 1. Two wide rings are fitted, and the deflector is arranged to ensure a high velocity to the entering gases.

Floating in the piston bosses, a hollow gudgeon pin is secured in the split small end of the connecting rod by a pinch screw, which also engages a groove in the outer wall of the gudgeon pin.

A single row of $\frac{3}{8}$ in. rollers is employed for the big end, and a heavy ($1\frac{1}{2}$ in. diameter) overhung crankshaft is used.

This crankshaft is one of the most interesting features of an engine replete with ingenious features. The crank web is a circular steel disc, and attached to its outer face is a small hollow flywheel so constructed as to act as a balance weight, and yet to fill the crank case, and provide high crank case compression.

Spring-loaded Compression Gland.

Roller bearings spaced nearly 4in. apart support the mainshaft, a long steel bush pressed and bolted into the crank case forming the outer race of each bearing. The space between the rollers and within the steel bush is occupied by an ingenious system of spring-loaded packing, so as to maintain crank case com-

Front and end elevations in section of the White and Poppe engine.

pression, whilst the driving sprocket (at present used for magneto drive only) extends well back between the crank bearings.

For Utilitarian Purposes.

As fitted in the mower, the outside fly-wheel acts as a blower, drawing in air past the crank case, and delivering it to the cylinder, the drive to the blades and wheels being through epicyclic gears and chains, and providing a ratio of 36 to 1. The clutch and controls are beautifully arranged, and all working parts are enclosed and run in oil.

Experimentally, the exhaust gases are led into a large silencer tangentially, and escape through a drilled pipe, the inlet ports which lie directly below the exhaust being connected to the carburetter through a port which adjoins the silencer.

At the moment we are sworn to secrecy with regard to further developments, but

our readers may rest assured that they will receive early information should these developments lead to something more closely connected with motor cycle matters.

CHAMPIONSHIP TRIALS.

The South-eastern Centre Inter-club Championship Team Trial for the Woolwich Cup will take place on Saturday, July 16th, at 2 p.m., from the Three Horseshoes, Knockholt, Kent.

Entries, which close on July 9th, should be addressed to the hon. secretary, Woolwich, Plumstead, and District M.C., 3, Nightingale Place, Woolwich.

On the same date the South Midland Centre holds an individual championship trial over a circular course of seventy miles, two non-stop circuits having to be covered. Watford is the starting place.

CURRENT AT

Motoring in Ceylon.

There are over 3,000 motor cyclists and motorists in the island of Ceylon.

Royal Patronage.

His Majesty the King has graciously consented to extend his patronage to the Annual Cycle and Motor Cycle Show at Olympia, which will be held from November 28th to December 3rd.

Screw Road.

Photographs of the now famous Screw Road—the hill recently "discovered" by *The Motor Cycle*—are now available. Unmounted prints, 9½ x 3½ in., cost 2s. 6d., or mounted 3s. 6d., from these offices.

Obituary.

We regret to announce the death as the result of an accident of Harold Parsons, champion motor cyclist of Australia, and holder of most Australian records. He was the greatest rider Australia has ever seen, and a thorough sportsman to boot. The most wonderful performance to his credit was 1,114½ miles in twenty-four hours on the road at Mortlake (Victoria).

Found, a Watch.

Mr. W. H. Wells, the captain of the M.C.C., has in his possession a silver watch lost by a competitor in the team trial. The owner should communicate with Mr. Wells, 366, Euston Road, N.W.1.

A "Surplus" Rumour.

We have heard of a man who recently bought a Government motor lorry for £28, which in itself was somewhat of a bargain. When, however, he found time to examine it he discovered that it contained six brand new motor cycles. History does not relate what action he took in the matter.

Bad Road Materials.

At a recent meeting of the Bromyard District Council a discussion took place on the materials used for road-making in Herefordshire. The Chairman, Alderman G. Cresswell, said if the Council could not get more work done on the roads for the money they were now spending, he thought they had better stop altogether. Their expenditure was double what it was last year.

The suggestion is made that the repair of the roads should be done on a piece-work basis. At present the roads were not properly rolled, and loose stones were found after the work was supposed to be completed. It was stated that in Worcestershire the roads were 150% better than in Herefordshire.

Special Features.

MID YEAR MODELS.

500 MILE RACE AT BROOKLANDS.

PILLION RIDING.

A 44 Ton Haul for a Sidecar.

Recently a reader (Mr. Hugh Sharrock, of Melling) towed a 44 ton barge along the Leeds-Liverpool canal for the distance of one mile, using a 7.9 h.p. Indian sidecar. A number of people witnessed the feat, and now Mr. Sharrock would like to know if it constitutes a record haul for a sidecar outfit.

Re-union of Ex-D.R.'s.

For the third time since the war ex-despatch riders of the 24th Division held an annual reunion last week. This year's venue was Chester. Thirteen of the old section motored to the Albion Hotel, and to augment this unlucky (?) number an ex-29th D.R. favoured them as guest. A motor boat trip up the River Dee and a visit to Eaton Hall were much enjoyed.

A SIDECAR GRAND PRIX AT PROVINS.

In England the A.C.U. demand that certain rules and regulations be observed regarding the activities of the passenger-in-sidecar events, consequently such balancing feats as depicted are not now seen in our Trials. The inset shows the extraordinary attitude adopted by a passenger on an Indian sidecar outfit whilst cornering in the recent race at Provins (France).

An Omission Rectified.

All our readers who are in possession of registered motor cycles should by now have received a postcard from the local taxation department requesting them to fill in frame and engine numbers on their registration books, and also to supply this information to the department. This step should certainly make more difficult the traffic in stolen machines.

CLUB NEWS. (Continued from page 15.)

Leeds M.U.

The results of the A. I. Greenwood Royal Enfield trial, held at the end of June, are as follows:

1. T. W. Lancaster, 2. H. Gothard, 3. A. Rayner, 4. P. A. Roberts, 5. T. Hardy, 6. J. S. White, 7. C. Keighley, 8. C. Jackson, and 9. A. Levitt.

North London M.C.C.

In spite of all the counter attractions in London last Saturday, a flexibility test was held near Radlett.

The competitors covered a certain distance fast and slow, using the same gear in each case. The results were as follows:

SOLO.

350 C.C. AND UNDER.—R. H. Baxter (2½ Radco).
600 C.C. AND UNDER.—L. P. Walter (4 Triumph).
UNLIMITED C.C.—R. G. Smith (Pearl-Jap).

SIDECARS.

650 C.C. AND UNDER.—C. H. Sullens (3½ Ariel sc.).
UNLIMITED C.C.—H. V. Bateman (10 Henderson sc.).

Coventry and Warwickshire M.C.

Over forty members competed in this club's trial last Saturday for the cup presented by the president, Lieut.-Col. J. A. Cole. The outward route to Oxford included Edge and Tyso Hills, which, well known as they are to the majority of Coventry riders, were responsible for several stops. The following apparently survived the trial with clean sheets:

J. L. Hardy (4½ Dunelm), W. Brandish (4 Triumph), T. H. Meakin (4 Triumph), E. H. Broughall (3½ Challenge-Jap), C. F. Dyer (3½ Norton), F. E. Shanks (4 Triumph), S. A. Tomison (4 Triumph), G. F. Evans (3½ Sunbeam), B. Clare (3½ Rudge), R. P. Ransome (3½ Lea-Francis), T. Doyle (3½ Lea-Francis), J. E. B. Bramley (3½ Coventry Challenge), J. Mathers (3½ Rudge), W. L. Danksin (3½ Rudge), C. Merrett (4½ Humber), H. Whitten (4½ Humber), G. L. White (5-6 Rover sc.), J. W. Hazlewood (8 Hazlewood sc.), G. Papin (4 Triumph sc.), D. A. Atkin (5-6 Rover sc.), J. W. Askey (5-6 Rover sc.), H. S. Perry (4½ B.S.A. sc.), T. R. Gibbins (8 Acme sc.), G. H. Vernon (7-8 Rudge sc.), F. Yates (4½ Humber sc.), A. J. Elliott (5-6 Rover sc.), A. Edwards (4½ Humber sc.), and G. Lee (3½ Sunbeam sc.).

Among those reported to have stopped in non-stop sections were:

L. Crisp (4½ Humber), Rev. S. R. Philpot (6 Martinsyde sc.), H. F. Harrison (4 Triumph sc.), H. Finch (4 Triumph sc.), C. Falconbridge (5-6 Rover sc.), E. Poppe (7-9 Rudge sc.), and F. Arbuckle (4½ Humber sc.). The last mentioned retired.

Week-end Club Events.

- July 13.—Oxford M.C. Paperchase.
- July 13.—Canterbury and District M.C.C. Speed-judging Contest.

Proposed Club at Evesham.

A meeting was recently held at the King's Head Hotel, Evesham, to consider the formation of a motor cycle club. Mr. F. C. Badham presided, and officials of the Cheltenham and Worcester clubs offered practical support by permitting members of the new club to take part in their trials.

Ulster M.C.C.

On Friday and Saturday, the 15th and 16th inst., a series of speed trials and races at Magilligan Strand will be held; a fifty miles championship of Ireland is also included. This event is one of the most important in the Irish competition world, and a large entry from England is hoped for. Entries should be addressed to Mr. W. Dowling, 48, Candahar Street, Belfast.

Shepley and District M.C.C.

A successful hill-climb and slow speed trial was held on the 26th ult. at Board Hill, on the Penistone to Woodhead road. Results:

SIDECARS (Open).—W. Dransfield (6 Enfield).

SOLO (over 3 h.p.).—B. Roebuck (3½ Norton).

SOLO (under 3 h.p.).—A. Townend (2½ Enfield).

In the slow speed trial F. Wallace (4 Triumph) was successful in winning both the solo and sidecar classes.

Any motor cyclists in the Shepley or Huddersfield districts are cordially invited to communicate with the secretary of this new club, Mr. Frank W. Brook, Post Office, Shepley.

Manchester M.C.

The paperchase held at the end of last month over about twenty-five miles of good roads through Cheshire was won by A. Whiteley on a 4 h.p. Dalton sidecar. This is the first of three similar events for the Taylor Bowl, awarded to the competitor with the best aggregate performance in the three trials.

A Section devoted to Club Announcements will be found on Supp. xlv.

THE 500 MILE RACE AT BROOKLANDS. Probably never before has such a field been seen at Brooklands for a single event. Here are the sixty-four competitors starting in the race which was destined to be a remarkable testimony to the reliability and speed of the modern motor cycle.

The 500 Mile Race

Great Race at Brooklands reflects Credit on Modern Motor Cycles of all Classes.
Wonderful Record Ride by H. Le Vack (Indian) at 70.42 m.p.h. Coventry-Victor,
Norton, Ivy, and New Imperial first in their Classes.

SEVEN a.m. is too early a starting hour to attract a crowd, and few except those most intimately concerned arrived at Brooklands in time to see the great 500 mile race for Capt. Miller's gold cup. The sun had barely dispersed the dawn mists when the men lined up in four rows just past the fork. Each class was distinguished by flimsy overall jackets of a different colour. The front row was composed of the 250 c.c. riders (white jackets) and the 350 c.c. (blue). The big 500 c.c. class (yellow) filled the second line. Next came the select 750 c.c. company—eight in number—with green overalls; and last of all the big 1,000 c.c. twins resplendent in red. The entire body of starters, sixty-five in number, formed a most imposing array, and the scene when they all got away simultaneously at a common signal absolutely baffled description. The sharp crack of so many well-tuned exhausts, the clouds of Castrol mingling with the mists of early morning, the semi-comic aspect of so many running and leaping men, formed a spectacle which repaid the company for its early rising.

For a few laps the procession was so continuous that nobody could sort out the riders who forged ahead, and the spectators were able to appreciate the new paddock at the fork, and to study their programmes. There were notable absentees. The A.J.S. cracks were missing altogether. So were two Scotts and Dance's Sunbeam, which as late entries ranked as reserves, and could not be found room on the track. The gold cup promised to be "easy fruit" for the

American entries, as a 1,000 c.c. engine can always beat smaller machines on Brooklands, and our British twins mostly

emanate from comparatively small factories. Nortons and Douglases were present in fair force. Triumphs were

The winner, H. Le Vack, and the 7 h.p. Indian, on which he put up such a splendid performance, being congratulated by W. Wells, of the Hendee Co.

The 500 Mile Race.

represented by Edmond on a side valve, and Shemans and Sgonina on the four-valve Ricardo-engined model. There were lots of interesting machines, and eke of resurrected riders. Pullin's Zenith had an Anzani engine, and Jepson's a Harley-Davidson power unit in a loop frame. The two Woodhouses' Matchless machines were standard spring frame models assembled on the previous day. It was pleasant to see the two Bashalls and H. H. Bowen out again; the smaller Martin-syde, ridden by the latter, is surely a new-comer to the track? The other *débütantes* included the 6 h.p. Blackburnes, R.W. Scout, Edmond, Coventry Eagle, two Hobarts, and the Acme Junior. The Ivy, destined to run so prominently, was a standard sports model.

A Group of Flat Twins.

The cinema men naturally took a special interest in H.R.H. the Duke of York's Douglas, ridden by S. E. Wood. The Coventry-Victor was the new short wheelbase model, described in this issue. Nixon's A.B.C. aroused special enthusiasm in the breasts of many clients of the Sopwith Co. The two Morris-Warne machines have aluminium cylinders with steel liners.

Presently the confusion of the incessant procession began to tantalise the lookers-on; and all eyes turned to the lap-scoring stand opposite the fork, where number cards were turned down as each man completed a lap. Other visitors pushed up towards the cages constructed across the end of the finishing straight for the purpose of repairs and replenishments.

From the outset it was clear that several terrific duels were being waged, and that other machines had comfortable victories assured in their classes if they could add stamina to speed. In the big class D. H. Davidson (Harley-D.) and Le Vack (Indian) were plainly the fastest, and watching each other like two game-

Victor Horsman ($3\frac{1}{2}$ Norton), winner of the 500 c.c. class. His speed averaged 62.31 m.p.h.

cocks. Of the 500 c.c. entry Horsman (Norton) and the three Triumphs seemed to be contesting the main issue. The 750 c.c. octette were rather more even—Parham, W. Bashall, and Jack Thomas being fairly level. For a long while Padley's Blackburne was supposed to be heading the 2 $\frac{1}{2}$ h.p. class, until somebody discovered the Ivy's number at the farthest end of the lap board, where it had been put as a reserve entry.

Among the 250 c.c. lightweights Milner's Levis, Kershaw's New Imperial, and Jacobs's Acme looked most formidable. But the track was so crammed with men—of whom the slowest were at this stage lapping at fifty odd, and the dozen

and a half of big twins at about 80 m.p.h.—that it was extraordinarily difficult to keep in touch with the positions. The noise was almost intolerable, the lightning procession altogether bewildering.

The officials were just beginning to hope the day would pass without accident when Harry Reed's back tyre came off just beyond the Vickers shed, and threw him rather heavily. He walked back, had his torn hands dressed, and pluckily continued until a leaking tank put him out several hours later.

For a while the spectators mostly concerned themselves with studying the progress of their personal friends, but after forty-eight laps there was a moment of universal excitement—Le Vack did not appear when he was due, and Davidson went ahead unchallenged for the nonce. It presently transpired that the Indian's back tyre had come off down the railway straight, and the Harley had snatched a six-lap lead before Le Vack got going again. Nobody wasted time changing tubes at the depots. Out came the wheel, and a new wheel, complete with ready inflated tyre, was generally bolted up inside a couple of minutes. When Le Vack took the track again he began to "drive" Davidson. The pair rode side by side for laps, though Le Vack was, of course, a dozen miles behind the Harley. His policy evidently was to chance the Harley's breaking something before he did.

100 Miles.

Presently the timekeepers got out the positions and speeds for the end of the first 100 miles, and the leaders in their respective classes proved to be:

- 1,000 c.c.—Le Vack (Indian), 80.27 m.p.h.
- 750 c.c.—Parham (Coventry Victor), 60.71 m.p.h.
- 500 c.c.—Horsman (Norton), 65.01 m.p.h.
- 350 c.c.—Norris (Ivy), speed not worked out.
- 250 c.c.—Kershaw (New Imperial), 57.42 m.p.h.

This announcement embodied several surprises. Paddock experts had not credited the big twins with trying to do more than 65 m.p.h. average at the outside. The 5-6 h.p. class machines were

B. Kershaw (New Imperial-Jap), winner of 250 c.c. class. His average speed of 50.34 m.p.h. for the 500 miles is a fine tribute to the little machine

N. Norris (Ivy), whose performance really stood alone. This standard two-stroke beat all the 350 c.c. four-strokes, as well as capturing the 500 mile record

The 500 Mile Race.

appreciably slower than the $3\frac{1}{2}$ h.p., and the latter were revenging themselves for being outstripped by the 350 c.c. in the T.T., though the A.J.S. was not here to do battle for its class. The magnificent showing of the New Imperial and the Ivy occasioned much comment, as did also the steady speed of the Levis.

By 9 a.m. a long string of men could be seen by the aid of binoculars repairing along the railway straight. Presently Edmond (Triumph) followed Le Vack's unhappy example, and lost a lot of ground through tyre trouble. Shemans was afflicted by slight clutch slip, due in part to an excess of oil reaching the chain case from the crank case. So Horsman was building up a good lead in the 500 c.c. class. By 9.30 he was two laps ahead. C. F. Temple (Harley), after riding most daringly and brilliantly for thirty-four laps, went out with tyre and engine trouble, leaving Davidson to act as unquestioned first string of the team. Dixon was also going excellently, leaning over a little as he did on his Indian in the T.T. At a quarter to ten Davidson had to change his back wheel, which allowed Le Vack to recover the ground he had lost in similar fashion. Half an hour later eight men had retired—not enough to diminish the roaring stream at all perceptibly. Of these, Greening (Conlon-Jap) had been taken to hospital with slight contusions due to a fall. After 200 miles the leaders were:

1,000 c.c.—F. W. Dixon (Harley), 74.34 m.p.h.
750 c.c.—W. H. Bashall (Martinsyde), 57.29 m.p.h.
500 c.c.—Horsman (Norton), 62.75 m.p.h.
350 c.c.—Norris (Ivy), speed not given.
250 c.c.—Kershaw (New Imperial), 51.26 m.p.h.

Before 10.30 the leaders had passed the half distance. Meanwhile Le Vack had once more changed his back tyre, this time as a precaution. It was interesting to see how the varying speeds translated themselves into terms of distance. Thus, when Davidson (Harley) had done 100 laps, the approximate distances of the leaders in the smaller classes were: 750 c.c., 80 laps; 500 c.c., 86 laps; 350 c.c., 73 laps; and 250 c.c., 72 laps.

Changing Positions.

The 300th mile saw more changes in leadership, for the positions now were:

1,000 c.c.—D. H. Davidson (Harley), 72.75 m.p.h.
750 c.c.—Parham (Coventry Victor), 55.81 m.p.h.
500 c.c.—V. Horsman (Norton), 62.5 m.p.h.
350 c.c.—N. Norris (Ivy), 51.64 m.p.h.
250 c.c.—B. Kershaw (New Imperial), 51.26 m.p.h.

About 11.20 a.m. the first British machine—Horsman's Norton—completed its one hundredth lap, five American twins having already completed that distance. The Norton had outdistanced all the British twins, and its feat indicates where our big twins might have stood if we had always given them as much attention as our 500 c.c. engines have received.

Presently news came that Dixon had sustained a bad crash on the railway straight, where his front tyre came off, and caused him to skid nearly the whole length of the flying kilometre. Luckily, he fended off the fall until his speed was reduced considerably, and so he was fit to proceed, though not a little shaken.

At about 11.40 a.m. there was a fresh sensation, for the leading Harley failed to come round when it was due, and Le Vack regained the lead, which he had

taken in the first hundred, and lost in the second. On the one hand, no back tyre would last long on a 7-9 h.p., driven as the leaders were driving, though it was noticeable that the Indian's back tyres did not hammer so much as the Harley's. On the other hand, Le Vack had evidently risked engine damage in his prolonged scrap with Davidson. Luck was on his side in both cases: the Harley first had tyre trouble, and then its engine went wrong. So at the end of four hundred miles the class leaders stood as follows:

1,000 c.c.—H. Le Vack (Indian), 71.40 m.p.h.
750 c.c.—E. W. Parham (Coventry Victor), 55.98 m.p.h.
500 c.c.—V. Horsman (Norton), 61.76 m.p.h.
350 c.c.—N. Norris (Ivy), 51.38 m.p.h.
250 c.c.—B. Kershaw (New Imperial).

Relieved of his most dangerous opponent, Le Vack was now easing down a little for safety's sake, and it was noticeable that Shemans's Triumph was able to hold the redoubtable Indian for a lap or so. Repairs and stoppages grew more numerous and lengthy as the interminable racket searched out weaknesses; but both the speed and number of survivors do the industry every credit. Soon after 1 p.m. Dixon, who had been riding like a demon, on the off chance of catching the leading Indian, found it wise to change a wheel; including replenishments the job took him less than three minutes.

A Great Duel.

As 2 p.m. drew near Le Vack looked a certain winner, and there was a tremendous sensation when he became overdue on his 182nd lap. Just as the anxiety grew keen, Harveyson passed, and made an indistinct signal. The braves in the Indian wigwam grew very excited; two of them commandeered a sidecar and rushed off with a spare wheel down the road to the aeroplane sheds. Just as the Harley folk wondered whether Dixon might yet win, a crouching red figure appeared round the far banking, and as the tiny dot swelled in size, a hundred pairs of glasses read off the number "6"! Three miles from victory Le Vack had managed to oil up a pair of K.L.G. plugs which had carried him since the start, and his stop had thus been brief. He was soon round again on his 500th mile, but the flagmen failed to stop him till he had completed 186 laps. He finished wreathed in smiles and apparently quite fresh. Dixon soon annexed second place—he staggered a little on dismounting; and Harveyson, who finished third, was positively exhausted.

The rest of the 1,000 c.c. men were handsomely defeated by Horsman's wonderful ride, but it is worth noting that the Zenith Company finished with six machines out of seven starters. The Martinsyde trio, consisting of two 750 c.c. and one 500 c.c. machines, put up a level and consistent race, and all finished well up.

Perhaps the most amazing performances were registered in the junior classes. It was bold of the Ivy people to enter a single standard machine; it was superb to win with it at over 51 m.p.h. Similarly the 250 c.c. New Imperial was revving very very fast for nearly ten hours, and sounded as crisp in the exhaust at the end as it had done at the beginning. A great race, and the honours all

went where they were thoroughly deserved and pluckily earned. Finishing order:

CLASS E.—1,000 c.c.

	h. m. s.	m.p.h.
1. H. Le Vack (7 Indian)	7 5 59½	70.42
2. F. W. Dixon (7 Harley)	7 15 37½	68.86
3. H. R. Harveyson (7 Indian)	7 44 43½	64.56
4. C. G. Pullin (7 Anzani-Zenith)	8 22 36	59.69
5. J. E. Harwood (8 Zenith-Jap)	8 50 26	56.55
6. S. C. Woodhouse (8 Matchless)	8 51 44	56.41
7. F. C. Townshend (8 Zenith)	8 53 16	56.26
8. Kaye Don (8 Zenith)	9 9 2½	54.64
9. J. W. Woodhouse (8 Matchless)	9 25 6	53.08
10. R. Dequin (8 Zenith)	10 15 44	48.72
11. V. Gayford (8 Zenith)	10 57 47	45.61

Retired: C. F. Temple (7 Harley), after 34 laps, engine trouble. D. H. Davidson (7 Harley), after 122 laps, engine trouble. O. M. Baldwin (7 Indian), after 137 laps, broken frame. H. Jepson (8 Zenith), after 55 laps, firing on one cylinder. G. Packman (8 Sunbeam-Jap), after 57 laps, gear box trouble. A. G. Miller (8 Martin), after 38 laps, engine running badly. H. Reed (8 Dot), after 115 laps, tank leaking.

CLASS D.

	h. m. s.	m.p.h.
1. E. W. Parham (5.6 Coventry Victor)	8 55 42	56.00
2. W. H. Bashall (6 Martinsyde)	9 5 8	55.03
3. F. A. MacNab (5 Trump-Jap)	9 44 39	51.51
4. J. T. Bashall (6 Martinsyde)	9 54 5	50.49

Retired: J. C. Watson (4 Harley-Davidson), after 50 laps, piston trouble. H. F. Brockbank (6 Blackburne), after 65 laps, valve gear. J. Thomas (6 Blackburne), after 28 laps.

CLASS C.

	h. m. s.	m.p.h.
1. V. Horsman (3½ Norton)	8 1 25½	62.31
2. F. G. Edmond (3½ side valve Triumph)	8 25 3½	59.51
3. G. J. Shemans (3½ 4 valve Triumph)	8 46 50	56.94
4. H. H. Bowen (3½ Martinsyde)	8 55 36	56.01
5. H. H. Beach (3½ Norton)	9 31 44	53.40
6. D. R. O'Donovan (3½ Norton)	9 40 47	51.67
7. J. D. Nixon (3 A.B.C.)	10 21 59	48.23

Retired: J. Emerson (4 Douglas), after 142 laps, forks failed. E. Longden (4 Coulson-Jap), after 131 laps. R. C. Chawner (4 Blackburne), after 117 laps, broken crankshaft. J. A. Watson-Bourne (Rex), after 76 laps, damaged cylinder. F. Roberts (4 Coventry Eagle), after 55 laps. S. E. Wood (4 Douglas), after 79 laps, chain trouble. C. Sgonina (3½ Triumph), after 52 laps, seized engine.

CLASS B.

	h. m. s.	m.p.h.
1. N. Norris (3 Ivy)	9 40 20	51.69
2. Tudor Thompson (2½ Douglas)	9 50 17	50.82
3. J. Holroyd (2½ Edmund)	9 50 22	50.81
4. Tommy Thompson (2½ Douglas)	10 41 37	46.76
5. L. W. Clements (2½ New Comet)	10 59 15	45.51
6. R. Weatherell (2½ R.W. Scout)	11 5 34	45.07
7. J. F. Hull (2½ Wooler)	11 25 17	43.77

Retired: E. Kichham (2½ Douglas), after 101 laps, magneto. A. A. Prestwich (2½ Dot-Jap), after 18 laps, engine trouble. A. A. Swan (2½ New Imperial), after 68 laps, mechanical trouble. S. M. Greening (Conlon-Jap), after 15 laps, accident. A. Watson (2½ Douglas), after 33 laps, leaky tank. L. Padley (2½ Blackburne), after 70 laps. H. J. Linc (2½ Linc), after 91 laps. S. E. Longman (2½ Wooler), after 96 laps, magneto and valve trouble. F. A. Longman (2½ Wooler), after 126 laps.

CLASS A.

	h. m. s.	m.p.h.
1. B. Kershaw (2½ New Imperial)	9 55 55	50.34
2. A. Milner (2½ Levis)	10 36 17	47.15
3. G. G. Savage (2½ Hobart)	10 58 43	45.64

Retired: J. V. Prestwich (2½ Massey-Arran), after 18 laps, piston trouble. A. K. Smith (2½ Morris-Warne), after 90 laps. G. S. Smith (2½ Morris-Warne), after 79 laps. H. Martin (2½ Martin), after 120 laps. W. J. Lord (2½ Hobart), after 59 laps, seized piston. W. A. Jacobs (2½ Acme-Junior), after 30 laps, broken piston.

FIRST TWELVE TO FINISH, IRRESPECTIVE OF CLASSES.

	m.p.h.
1. H. Le Vack (7 Indian)	70.42
2. F. W. Dixon (7 Harley)	68.86
3. H. R. Harveyson (7 Indian)	64.56
4. V. Horsman (3½ Norton)	62.31
5. C. G. Pullin (7 Zenith)	59.69
6. F. G. Edmond (3½ Triumph)	59.34
7. G. J. Shemans (3½ Triumph)	56.94
8. J. Harwood (8 Zenith)	56.55
9. S. C. Woodhouse (8 Matchless)	56.41
10. F. Townshend (8 Zenith)	56.26
11. H. Bowen (3½ Martinsyde)	56.01
12. E. W. Parham (5 Coventry Victor)	56.00

HANS RENOLD LTD.,
DIDSBURY—MANCHESTER.

Sporting Two Days Trial for Naval Officers. Sixteen Starters, Four adjudicated Equal Winners of Trophy.

EVEN more successful than its two predecessors the third competition for the Arbutnot Trophy has shown that for sheer keenness and sportsmanship the naval officer is without equal. He is, and must be, the most genuine type of amateur. He spends little time ashore, and so must, of necessity, be precluded from enjoying any of the advantages by which the civilian rider can profit. His mount may be of any age, he can have no axe to grind, and he is made to follow a course he would not dream of pursuing in the ordinary way and covers it without a grumble. One of those competing last Friday reported a stop on a certain hill and happened to mention that a cart was in the way. Said the official, "Would you not call that a traffic stop?" "Oh, no," replied the competitor, "it was sheer bad driving on my part." Several men who suffered many troubles carried on purely for love of the sport even though they knew they had no chance of winning, while it is interesting to have to record that all who competed in the previous Arbutnot Trophy events have attempted to repeat their efforts in the succeeding competition.

Keen Supporters.

So far Terence Back, who, with Kidstone, last year's winner, was in the running for the trophy, has competed in all three, but Derek Stephens, and Jameson, who ran in the first event in 1919, and were prevented last year, turned up for this year's competition. This goes to prove that the trial is certainly appreciated by those who have ridden in it, while the enthusiasm of those present in endeavouring to render it more popular among their shipmates was quite remarkable.

This year the headquarters were at Sevenoaks, and it goes without saying that the Auto Cycle Union chose a course which was in every way worthy of this body. Not only were the usual Surrey and Kentish test hills in the programme, but two new ones—Yorks Hill and Starvecrow (locally known as Rook's Hill)—were included.

Each competitor was credited with two hundred marks at the start, ten being deducted for a stop on a named hill on

the first circuit, fifteen on the second, and twenty on the third, while it must be remembered that the course of fifty-eight miles had to be covered non-stop three times.

Of the twenty-one entries, five did not start, and of these W. G. L. Cooper (Scott) had magneto trouble before reaching Sevenoaks.

The first man, Wheeler (4 Coulson), was despatched from Bligh's hotel at 9.1 a.m. by Major Dixon Spain.

On Paddledock Hill. Lieut. C. Plumer (3½ Sunbeam), followed by Lieut. L. A. Heath (8 Eut).

The Arbuthnot Trophy Trial—

Although not the roughest hill, despite the loose patch at its base, Succombs, used by the A.C.U. in the One Day Trial, was probably the steepest, but it proved to be no impediment for the better and newer mounts, and excellent climbs were made by Wheeler (Coulson), Back (Triumph), Jameson (Sunbeam), James (N.U.T.), and Davis (Triumph). Failures were rare at this point, but Hovenden (Zenith) was brought to a standstill.

(Left) Sub-Lt. H. B. Baker (Indian) on the stone-strewn surface of Saltbox Hill.

(Right) Rough and narrow lanes were included in the course. Sub-Lt. R. Oliver Bellairs (Scott) on Starvecrow Hill.

The remaining hills not previously mentioned—Chalkpit, High Lane, Polesteep, and Cudham—presented no difficulties, but Starvecrow at the end of the first lap was the chief topic of conversation. Not only has it a consistent gradient of 1 in 5 or worse, but rocks project through the surface and loose stones abound, while there is only a narrow pathway which is negotiable. Despite this fact, the first lap performances were quite good, and only Dibley (Indian), Hovenden (Zenith), and Grogan (Zenith) failed, the latter owing to not changing down early enough.

At lunch time there were two retirements—Baker (Sunbeam) and Heath (Bat)—both owing to tyre troubles. Baker foolishly started with a worn back cover. So far Back (chain-driven Triumph), Jameson (Sunbeam), James (N.U.T.), Chads (Triumph), Davis (Triumph), and Wheeler (Coulson) had made non-stop runs.

In the afternoon the performances on Yorkhill were distinctly good, and proved that the Navy possesses some clever riders. Wheeler came up well as usual, while Hovenden, Plumer (Sunbeam)—one of last year's riders—and Ford made good ascents.

Starvecrow or Rook's Hill was certainly a terror. Wheeler swerved badly but got up, Knox (Triumph) had his machine somewhat damaged by its fall, but did well, though he wobbled badly. Grogan (Zenith) had to make a second attempt, Stephens (Douglas) took a toss and failed,

while Oliver Bellairs failed three times and damaged his Scott's footboard clip.

At the end of the afternoon's run Hovenden (8 Zenith), who had failed on Chalkpit, the Hairpin, Succombs, and High Lane, retired. A puncture spoilt Jameson's non-stop record, leaving only Wheeler (Coulson), Back (Triumph), Chads (Triumph), and James (N.U.T.) with clean sheets.

The Second Day.

The dozen survivors lined up at 8 o'clock on Saturday morning to make a third round of the course. By now they knew the hills and the stony surfaces; but, although the hills caused little trouble, minor difficulties occurred, and there were only four men left in the running for the

trophy—Back, Plumer, James, and Chads. All that remained to be done after lunch was the first half of the course as far as Caterham, and a fairly straightforward run to Brooklands, where it had been arranged to see the finish of the 500 miles race. Unluckily for the Arbuthnot trial, however, Le Vack's fine performance had upset all calculations, and they arrived too late to see him finish. Up to lunch time only one non-stop man had been eliminated, but Stephens (Douglas) had tyre trouble and retired.

There were no further retirements, but Knox (Triumph) stopped to pull a piece of wire out of his rear tyre, and Davis (Triumph) stopped for petrol, but, notwithstanding, arrived 15m. ahead of minimum time. Nothing daunted, the four non-stop men arrived to time and with clean sheets, and on their case being considered by the officials it was decided that they had all earned silver medals and the right to have their names engraved on the trophy, but to decide as to who should hold the trophy lots were drawn, and the draw was won by Back. The result was most popular, and thus concluded the third successful and sporting Arbuthnot Trophy competition.

Rider and Machine.	Remarks.
Lieut. T. H. Back, R.N. (4 Triumph)	Joint winner of trophy and holder.
Lieut. C. Plumer, R.N. (3½ Sunbeam)	
Lieut. P. V. James, R.N. (5 N.U.T.)	Joint winners of trophy.
Sub-Lieut. H. C. Chads, R.N. (4 Triumph)	
Eng. Lieut.-Comdr. S. O. Wheeler, R.N. (4 Coulson-B.)	Retired 3rd lap; broken belt rim and puncture. Carburettor trouble and loss of power. Retired 2nd lap.
Eng. Lieut.-Comdr. A. K. Dibley, R.N. (7 Indian, 1915)	
Sub-Lieut. H. B. Baker, R.N. (3½ Sunbeam)	Retired 1st lap; burst cover.
Lieut.-Comdr. D. C. Ford, R.N. (6 A.J.S.)	Fell on Friday and stopped engine accidentally on Saturday. Finished to time.
Lieut. R. C. Hovenden, R.N. (8 Zenith)	Retired 2nd lap; failed on most hills.
Lieut. L. A. Heath, R.N. (3-6 Bat)	Retired 2nd lap; tyre troubles.
Sub-Lieut. R. T. Grogan, R.N. (6 Zenith)	Numerous stops on hills.
Lieut. W. D. Stevens, R.N. (4 Douglas)	Fell on Starvecrow Friday, tyre trouble Saturday. Retired 3rd lap.
Sub-Lieut. R. Oliver Bellairs, R.N. (5½ Scott)	Failed on several hills. Finished to time.
Sec.-Lieut. T. E. N. Knox, R.M. (4 Triumph)	Fell on Hairpin Friday, stopped to pull wire out of tyre Saturday.
Comdr. J. C. Davis, R.N. (4 Triumph, 1915)	Sooted plug Friday, stopped for petrol Saturday afternoon.

THE SCOTTISH SIX DAYS TRIAL.

131 Entries for Next Week's Big Event in the North. Several New Routes Planned.

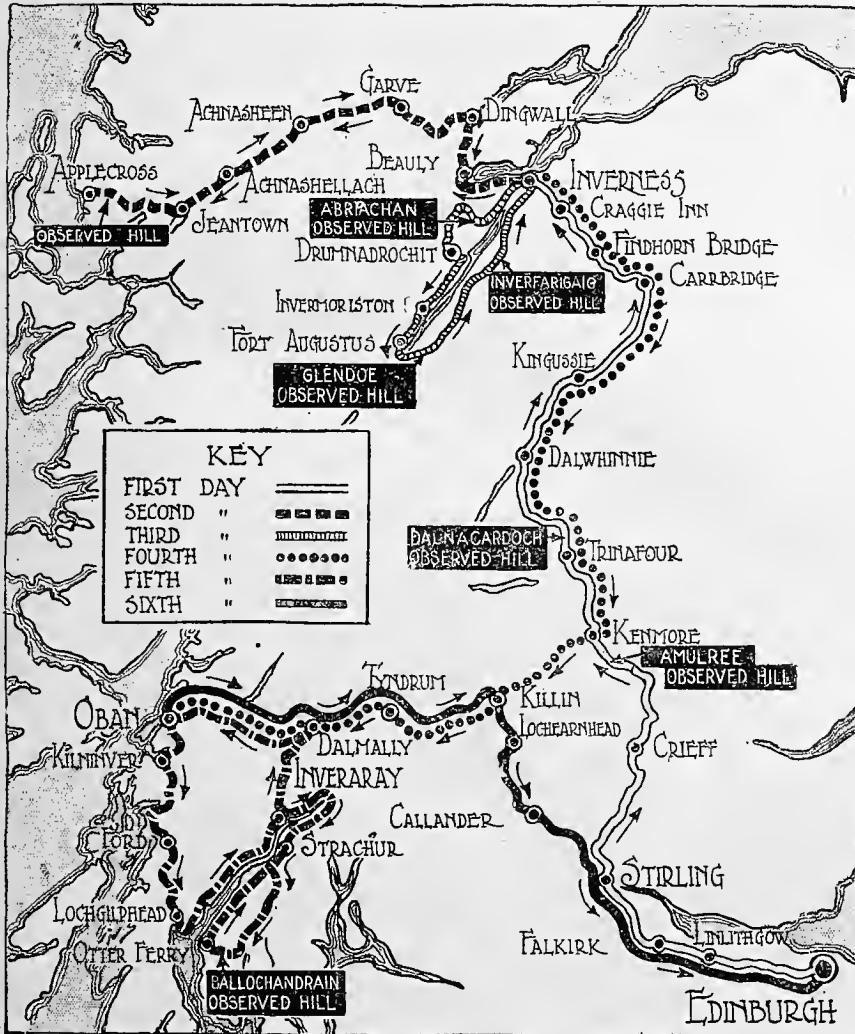

ON Monday next competitors in the Edinburgh M.C.'s classic Six Days Trial will leave the Scottish capital to cover the first day's route to Inverness, via Stirling, Crieff, and Amulree. The second day's route is to the famous

Applecross Hill on the west coast, and back to Inverness; and the third day will be spent in the neighbourhood of Loch Ness, two of the test hills being Abriachan and a recent "discovery," Inverfarigaig, a hill likened to the Welsh

Screw Road. Thursday will see the competitors journeying south again *via* Killin to Oban; while Friday's route will be a circular one, returning to this well-known Scottish resort. On Saturday the route is over main roads to Edinburgh.

LIST OF ENTRIES, WITH OFFICIAL NUMBERS.

- NO OBSERVED HILLS.

An Open Reliability Trial in the Bournemouth District.

A Harley-Davidson rider—J. Caslake, Junr., followed by H. M. Brewer (2½ Wilkin) and W. F. Arnatt (3½ P and M.) near Corfe Castle.

A couple of Martinsydes near Stoke Hollow, on a hill that was thickly strewn with big stones. The riders are A. A. Symes and F. L. Soames.

EXCEPT for one timed climb there were no observed hills in the first post-war open trial organised by the Bournemouth and District M.C. and L.C.C. on Saturday last.

A speed trial was included, and elimination was effected by means of time checks, both open and secret.

Weighing in took place at an early hour, and a start was made in perfect weather, at 9.30 a.m.; the course, though somewhat lacking in really severe hills, was made difficult by the rough by-roads traversed.

The course was by the main road to Wareham, then by circuitous route *via* Corfe Castle, taking in a very rough chalky hill called Creech Hill, which gave very little trouble, back to Wareham, thence on by-roads to Bere Regis, Milborne, Stileham, Dewlish, Lower Ansty, Stoke Wake Hill, Turnworth, Woolland, Winterbourne Stickland, and Blandford, for lunch. Nothing severe was encountered on the morning run except Stoke Wake Hill, and this only on account of surface. The riding here was very poor. It was a great pity that this hill was not observed, for about 30% failed. Perhaps this was due to lack of experience, for of the seventy-four entrants not a dozen were well known in the competition world, most being local clubmen.

The star performances were: R. Thick (7 Indian sc.), J. A. Newman (7 A.J.S.), D. T. Phillips (7 Harley-Davidson), J. E. J. Whitaker (3½ Norton), and H. F. S. Morgan (10 Morgan). W. Julian (Levis) had very hard luck, for

halfway up the hill his leather coat caught in his chain, and brought him to a sudden stop. H. R. Kennedy also came to a sudden stop, this being due to lack of fuel. Except for three watersplashes, all rather shallow, due to continued drought, and miles of very flinty lanes—which made the thought of punctures very prominent—there were no further incidents to report in the morning run.

The Second Section.

In the afternoon Blandford was left by the Shaftesbury Road, through Iwerne Minster and Sutton Waldron to St. John's Hill, Shaftesbury, which gave no trouble, and the run continued to the Zigzag Hill. Here experience counted, and the old hands rounded the hairpins with ease, while others on similar machines had their feet well out on all corners.

The next point of interest was the timed hill at Fontmel Magna, an excellent wide hill of about 1 in 6. The top being visible from the bottom, the flagging system of timing was used. This enabled the officials to get the men off without any undue waiting. No failures were observed, and quite a number made fast climbs. E. J. L. Strong and D. T. Phillips (7 Harley-Davidson) being particularly fast. Some of the 3½ h.p. solo machines would have been much faster on their middle gears.

From Fontmel Magna the route continued to Tarrant Gunville, Tarrant Hinton, and Tarrant Launceston. Here a watersplash some yards wide, but not deep enough to give trouble, was negotiated, after which the run was fairly straight-

forward to Cranford Park, put at the disposal of the Bournemouth Club by Lady Wimborne for the speed trial. The Park being only a few miles from Bournemouth, some hundreds of spectators were present. The Harleys of Strong and Phillips were again very prominent, as also were O. Goodman (3½ N.U.T.), S. Priestley (4 Triumph), J. H. Welch (4½ B.S.A.), the brothers Randall Jones on Triumphs, and C. Volk (Sunbeam). The two-strokes of Julian (2½ Levis) and Handley (2½ O.K.) also had a useful turn of speed. In all, sixty-eight signed in at the last check.

THE ANGLO-DUTCH TRIAL.

The new date of the visit of the Dutch motor cyclists to this country has now been fixed as September 24th to 27th. The Anglo-Dutch trial will be on the 26th. A very complete programme is being arranged, and briefly is as follows:

Friday, September 23rd.—The Dutch team leaves for England.

Saturday, September 24th.—Entertained to breakfast by the Essex M.C. Run to Coventry. Dinner as guests of the Coventry and Warwickshire M.C.

Sunday, September 25th.—Run to Worcester, *via* Stratford-on-Avon. Dinner by the Worcester M.C.

Monday, September 26th.—Anglo-Dutch trial from Worcester to Brooklands, including speed trials on the track. Dinner at R.A.C. as guests of the A.C.U.

Tuesday, September 27th.—Return to Harwich.

enables the passenger behind a

Bluemel's

SIDE CAR WIND SCREEN

to make unlimited horizontal or vertical adjustment as desired, simply by unscrewing with the fingers the two butterfly nuts shown. The whole screen may then be moved backward or forward, up or down, and again screwed to a firm position. This full adjustability is a big advantage over other types of screens which are fixed or semi-fixed. Made of transparent celluloid with a steel frame it is both light and rigid, and never loses its original shape. The side wings are hinged, allowing the whole screen to swing aside, giving free access and exit.

The Bluemel Windscreen has all the advantages.

Can be obtained through any Cycle and Motor Agent. If you desire further particulars send for illustrated leaflet—posted by return.

Price 88/- each.

What should a Tyre Valve be?

- It should be airtight;
- It should be easily inflated;
- It should allow you to test the air pressure in the tyre;
- It should be simple in construction;
- It should be dustproof;
- It should be made in standard sizes.

All of these qualifications are embodied in the

The spring "Inside" is the finest air retainer in the world. The slotted cap can be used as a key to remove or replace "Insides." Testing by pressure gauge is a most simple operation. It is the only Tyre Valve made in one piece. There are no joints—no weak spots.

There is a "Schrader" Tyre Valve for every type of wheel.

Extra "Insides" are obtainable in dust-proof boxes of five from all good dealers.

CONVERSIONS

The valves on your present tyres—if not already "Schrader Universals"—can be adapted to the "Schrader Universal" principle at a trifling cost. And then you will have no inconvenience from leakages arising from perished valve rubbers or other causes. Write to us for particulars.

Illustrated Booklet post free.

A. SCHRADER'S SON, Inc.
Victoria Rd., Willesden Junction,
London, N.W.10.

Manufacturers of the "SCHRADER UNIVERSAL" Tyre Pressure Gauge.

Be sure it's a "SCHRADER."

Look out for the name.

BRITINOL

The Trouble Saver

Every motor cyclist should include a "Britinol" Soldering Outfit in his Tool Kit. It is the most efficient and practical soldering outfit on the market. There is no mess or bother with flux or resin, "Britinol" is solder and flux combined in paste form, ensuring a clean, workmanlike job in a few moments. Used in the leading engineering workshops, and acknowledged to be the only soldering medium for high grade work. All accessory dealers should write for Trade Terms of this quick seller.

Price 9/6, or sample set post paid in the United Kingdom for 10/6.

BI-METALS, LTD.,

St. James's 71

THE SADDLE THAT WON THE SANGSTER CUP & 3 GOLD MEDALS IN THE LAND'S END TRIALS.

Model 10 as illustration £4 10 0.

ABSOLUTELY SHOCK PROOF.

Read what Mr. Short says—

Having ridden your Tao-Sad "No Hurts" Saddle in the recent Land's End Trials and being awarded 2 gold medals and the Sangster Cup, I feel it my duty to tell you again what I think of the Saddle. Having covered well over 600 miles in 2 days' riding, I think it is the most comfortable seat I have struck and I can honestly say I did not have the least sign of soreness, or stiffness in the back, nor did I receive a bad jolt the whole journey.

Wishing you every success,

Yours faithfully (signed) F. SHORT.

And what Mr. Boynton says—

I have pleasure in informing you that I used one of your "NO HURTS" Saddles through the Land's End Trials this Whitsun and have much to thank them for. Although some of the roads were absolutely vile, the comfort was a revelation unimaginable, and unless one had the actual experience of riding one of your saddles is almost unbelievable.

MAGNETOS

in the
SENIOR T.T.

A. Bennett (Sunbeam with "M-L" Magneto) broke all lap records, only to be beaten later by

F. Edmond (Triumph), who lapped in 40 min. 8 sec., a wonderful record and also used an "M-L" Magneto.

Sunbeam and Triumph machines fitted with "M-L" Magnetos gain 6 Gold Medals out of 14.

Out of 64 starters 20 machines were fitted with "M-L" Magnetos. Each one of these demonstrated the efficiency of "M-L" Magnetos and their absolute reliability under the severest possible conditions.

All enquiries and correspondence relating to Overseas Trade and to Retail and Trade business in this country to be addressed to Messrs. S. Smith and Sons (M.L.), Ltd., Central Works, Crickwood, N.W.2. Sole Makers: The M-L Magneto Syndicate, Ltd., Coventry, to whom all enquiries from Manufacturers should be sent.

The Reason WHY.

There are very definite reasons WHY Motor Cyclists send to us from all over the Country, and why YOU should be a Colmore Customer, if you are not already one.

Firstly

Our deferred payment system is in no way financed or influenced by any society or bank.

To Motor Cyclists who like to "pay as they ride" this fact will be greatly appreciated, since it saves them from the annoyance of investigation into their private affairs.

We contro our own deferred payment system, and this is at the disposal of all bona-fide and approved customers.

Secondly

You get personal attention at the Colmore.

You have the feeling that there is nothing too much trouble for us as long as YOU get satisfaction.

And, it's the satisfaction they get which brings customers to us again and again.

And when you add to all this our wide range of Machines, Spares and accessories — when you consider our many years' experience in Motor Cycling, and the enthusiasm we share with all Motorists, CAN YOU WONDER THAT WE HAVE CUSTOMERS ALL OVER THE UNITED KINGDOM?

Colmore Depot:

MORGAN 1921 10hp, M.A.G., water-cooled, grey, as new, mileage 1,500, spare tyre, all accessories; £260; trial by appointment.—Williams, 6, Paxton Place, Gipsy Rd., S.E. [7747]

COVENTRY PREMIER Runabout, 3-speed and reverse, spare wheel, screen, hood, dickey seat, dynamo lighting; immediate delivery.—Marston, 31, Bridge St., Chester. [7740]

COVENTRY PREMIER, as above, electric Klaxon, 3-speed and reverse, spare wheel, screen, hood, dynamo lighting, licence paid, mileage 1,500, used for demonstration only; £220. [7740]

COVENTRY PREMIER, 3-speed and reverse, spare wheel, screen, hood, mileage under 1,000, licence paid; £200.—Marston, 31, Bridge St., Chester. [7934]

A.V. Monocar, 1919, polished aluminium body, 2-speed and clutch, licence paid, electric lights, mechanical horn, etc., in excellent order, competed at Brooklands; £68. [7740]

MORRIS-OXFORD 1914 2-seater, excellent order, just overhauled, lamps, detachable wheels, etc.; £190.—Wallington Motor Co., Ltd., 35, Stafford Rd., Wallington, Surrey. [7731]

1921 Burrey Cycle Car, 3 speeds and reverse, small mileage, electric lighting; exchange solo and cash, or sell outright; offers considered.—Burrey, Northchurch, Berkhamstead. [7414]

SAXON Light Car, 1915, 4-cyl., 2-speed, reverse, streamline body, all tyres very good, smart and fast, very reliable; accept £105 cash.—R. Watson, Victoria Rd., Aldeburgh, Suffolk. [7720]

CASTLE-THREE, 1921 model, slightly shop-soiled, 4-cyl., water-cooled engine, spare wheel, dynamo lighting, hood, screen, etc.; £245.—P. J. Evans, 81-91, John Bright St., Birmingham. [7340]

WAUCHOPE'S, 9, Shoe Lane, London, E.C.4.—1921 Morgan de Luxe, o.c. M.A.G. engine, fully equipped, hood, screen, etc., not ridden 250 miles, tax paid; £225; easy terms arranged. [4536]

MORGAN 1919-20 G.P. 10hp, M.A.G., w.c., finished dark green, acetylene, discs, Cowey horn, spare tube, jack, pump, tools; £170.—65, Osborne Rd., Forest Gate, E.7. [7527]

SWIFT 13hp, 3-seater, Bosch mag., new Zenith carburettor, Beatonson hood and wind screen, thoroughly overhauled, fully licensed and insured; price £170.—Andrews, 41, North Walls, Winchester. [7746]

A.C. Sociables, by the A.C. Co., dependable little runabouts, mechanically sound, good appearance, modern, fully equipped; from £55 to £85; trial.—29, Allsop St., Upper Baker St., London, N.W. [6465]

SMARTEST Morgan on the road, £195 or best offer; 1920 de Luxe, w.c., electric and acetylene lighting, perfect, all new spares, photo, 200 miles trial pleasure.—Hall, 54, Maygrove Rd., Brondesbury. [8013]

TRUMBULL, 1916, 4-cyl., 13.2hp, central gate change, detachable wheels, electric lights, new tyres and hood, repainted and overhauled; £160; offers, combination wanted.—1, Towley Rd., E. Dulwich, S.E.22. [7714]

"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate.

Complete Outfit, List No. 30/1, Price £5 5 0 (If tail lamp is not required, deduct 12/6).

"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. All our Accumulators are specially made to stand vibration. Ordinary accumulators are never satisfactory for motor cycle work. The hard wood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc.

Complete Outfit, List No. 30/2, £1 1 0.

DYNAMO & SWITCH BOX

(Write for List No. 7.)
4.6 volts 20 watts. List No. 30/8, Price £7 1 0

Westwood Special Lines are stocked by all reputable agents.

RUNABOUTS AND CYCLE CARS.

WHIPPET, almost brand new, only used 600 mi. many extras, easy starting, smooth running, lamps, Cowey horn, special valve litter; car absolutely faultless; £160.—Wallis, 23, Hartington Gr. Cambridge [77]

ROVER 1921 Model 8hp, Light Car, bought 1 April, mileage under 1,500, excellent condition, dynamo lighting, spare wheel, available 4th Apr. price £240.—Capt. H. H. Gilbert, Kenilworth 1, Fleet, Hants. [77]

TAMPLIN-CARDEN 1919 2-seater, 8hp, J.A.P., speeds, seat, kick, starter, perfect condition throughout, just been completely overhauled, all ty good; £80, bargain.—R. Watson, Victoria Rd., Alburgh, Suffolk. [77]

G.W.K., 1914, as new, stored until August, 19 re-coachpainted, new hood, dickey, elect lamps, oversize tyres, speedometer; bargain, £11, exchange War Bonds or combination.—Trefusis, He stone Lane, Pinxter. [77]

AGENTS for G.N., Grahame-White, Coventry Premier, Kingsbury, Rover, and other light cars new and second-hand; always a good selection; stock; cash or extended payments.—Service Co., 2, High Holborn, W.C.1. [77]

COVENTRY Premier Runabout, brand new, 1st model, dynamo lighting set, spare wheel, 1,000, absolutely as new, licence paid; a genuine bargain at £200; exchanges entertained.—Bambers, L. Eastbank St., Southport. Phone: 607. [77]

1920 (date) 10hp, De Luxe Morgan, M.A.G. engine, hood, screen, etc., electric lighting, speedometer, mileage 1,000, absolutely as new, licence paid; a genuine bargain at £200; exchanges entertained.—Bambers, L. Eastbank St., Southport. Phone: 607. [77]

1921 Morgan Runabouts, de Luxe, family, and all models, ready drive away; complete stock; spares, chains, sprockets, tyres, etc.—Main Distributors, Monmouthshire, W. Luther J. Davies, 71, Commercial St., Newport, Mon. Phone: 2488. [77]

G.N. 1921 10hp, Latest Touring Model, brand new, fully equipped; £241. Your present machine may be taken as part payment. Extended terms arranged. Authorised agents, Elce and Co., 15-16, Bishopsgate Av., Camomile St., E.C. Phone: Avenue 5548. [77]

MORGAN Runabout, fitted new J.A.P. in 1920, speed gear box, Lucas dynamo lighting, 5 lamp Lucas electric horn, petrol tin carrier, just overhauled and repainted, tyres 700x80 (nearly new); any nearest offer to £150.—W. G. Eaton, 373, St. Stanton Rd., Coventry. [X48]

BRAND New Laurence Jackson 2-seater Light Car, all detachable wheels with spare wheel, 5 in. all, 10hp, J.A.P. water-cooled engine, speeds and reverse, hood, screen, and large, best price £275, faultless and guaranteed; accept £185, absolute gift.—191, Sweetman St., Woly hampton. [77]

CASTLE THREE New 1921 2-seater Runabout, actually in stock; detachable wheels all on spare wheel and tyre, 4-cyl. engine, hood, wind screen, beautifully sprung, dynamo lighting, fully equipped, beautifully finished; the finest runabout on the road, speedy and most economical; £295; any good motor cycle or combination taken in part exchange.—Bamburgh Ltd., 2, Eastbank St., Southport. Tel.: 607. [77]

CARS FOR SALE.

WOLSELEY 16-20hp, 3/4 Landaulet; £125.—77, A Lane, S.W.2. [77]

£60; 10-12hp, 1. Unic landaulet, lamps, Stepany, e perfect.—44, Chapel St., Marylebone. [77]

LANDAULET 1910, 16hp, £90; exchange motor cycle.—Daily, 31, Gattop Rd., Tooting. [77]

CADILLAC 8-cyl., Touring Car, perfect; £295.—Carr, 94, Branksome Rd., London, S.W.2. [77]

SIZAIRE-NAUDIN 2-seater, all on; £65, near of —T. Callard, 25, Conington Rd., Lewisham, S. [77]

ABSOLUTE Bargains—Sixty cars stocked; posted procures list. Call—Douglas S. Cox, West 3 wood. [77]

14-16hp, Gregoire 4-seater, fully equipped, a running order and condition; £145, or t combination part.—436, Whitehorse Rd., Thorn Heath, S.E. [77]

SMART Little Car, wire wheels, differential, w and sector steering, live axle, 2-speed, 8hp, cooled twin, easy to drive; £70.—16, St. Mary Abbe Ter., Kensington. [77]

FOR Sale, 1916 Trumbull 12hp, 2-seater car, v spare wheel, hood, wind screen, and to £135; or would exchange for good combination solo machine.—Winn, Bentham [77]

DE DION, twin-cyl., very nice comfortable for 5-seater open touring car, complete, in excel all-round condition, tax paid to end of year, barg £115; trial.—11a, Dafforne Rd., Upper Tooting. [77]

£140.—10hp, 2-seater 1915 Trumbull, 4-cyl., £ paid, water-cooled, 4 speeds, electric light, dete able wheels, hood, screen, very good climber.—Ow 8, Randolph Mews, Maida Vale, W.9. Appointment [77]

Motor Coaches.

THERE is no gainsaying that the motor coach is becoming part and parcel of our national life. Already its popularity is far greater than the form of travel it has supplanted—the horse-drawn char-à-banc—and, therefore, it has to be taken into consideration when road faring questions are under discussion.

From the motor cyclist's point of view, the great increase in motor coaches is regarded almost as a nuisance, but it is realised that the "day trippers" have an equal right to the road. On the other hand, there are many drivers of these large pleasure vehicles who make no attempt to foster goodwill between themselves and other road users. With a little commonsense and courtesy, they could remove the chief cause for complaint on the part of owners of private machines, who often have difficulty in overtaking the larger vehicles.

In fairness to the average motor coach driver, it will be admitted that, on learning of the presence of another and faster vehicle in the rear, he will promptly "pull over" to the left. There are others, however, who do not show this willingness so readily, but need not now be discussed.

One can appreciate the motor coach driver's preference for the crown of the road, and also the difficulty of hearing the horn of an overtaking vehicle, but it occasions surprise on the part of other road users that all motor coaches and other large vehicles do not carry a mirror reflecting a view of the road behind, or, preferably, a "look-out" man at the rear.

The fitting of mirrors should be made compulsory by law, and, until this is done, we cannot expect the universal use of such a fitment, however much its value is appreciated by the motor coach driver. As a rule, the driver is not the owner of his vehicle. If such were the case, probably the majority of these large vehicles would be so equipped. We understand that this and other matters affecting the popular motor coach is being considered by the Ministry of Transport.

As regards speeds, while perhaps the statutory 12 m.p.h. is a trifle too low to be of any real value, we think that some of them are too fast. There is also a feeling among all other classes of road users that such large vehicles should not be permitted to traverse roads which are only sufficiently wide to allow their passage, and it has been suggested that by law they should be compelled to keep to those highways which have sufficient width to allow two of them to pass. Certain county councils have recognised the need for restricting motor coach traffic in narrow lanes.

Reliability Trials or Obstacle Races?

ON a recent occasion two team trials were run on the same day, and out of fields of 68 and 162 there were 4 and 101 finishers respectively.

The routes selected were of about equal distance, and each was covered thrice, but the natural difficulties of one were much greater than those of the other. By artificial means the difficulties on the route, already severe by nature, were intensified to such an extent that the majority of the entry was eliminated half way through the first circuit.

Spectators thereafter on other parts of the route lost interest, and the scene at the finish was dull in the extreme. The organisation of a trial which produces such results is, unintentionally no doubt, working against the best interests of the movement; far better to have a close finish between many riders than cast a stigma on the reliability of machines by setting them at some artificial obstacle which eliminates all but the ultra-cautious.

A moral is drawn from the results of the other trial over fairly ordinary roads: the finish was close, yet absolutely decisive, the proportion of those surviving at least two laps was high, and public interest was therefore sustained to the end. The last item is most valuable from the propaganda point of view.

Occasional Comments By LION

Early Birds.

IF I had been born into a feathered species, I should certainly have left the worm to others.

As it is, others are welcome to whatever is the human equivalent of the worm. But July 2nd found me many miles from Brooklands, and under orders to attend the start of the 500-mile race at 7 a.m. I rose with the dawn—ugh! It is astonishing how cold the dawn can be during a heat wave. Fur gloves. Leather sausages over my ears. And even then I wished I possessed one of those false noses our Gallic neighbours wear at carnivals. 6.30 a.m. found me tottering into Cobham in a frost-bitten condition, trying to believe that the sight of the pallid sun fighting the mist over a Surrey landscape was worth all I had suffered. The White Lion was full of other sufferers, and it was with set teeth we rolled out to the track, solemnly cursing the B.M.C.R.C. and all its works.

Some Job.

THE pressmen were perched on the sort of wooden scaffold on to which railway companies unload sheep. We had kitchen chairs to sit on, and, ere long, the eternal roar of the engines and the glare of the sun, reflected from the concrete before us, set us all nodding. When we caught Secretary Loughborough, we strafed him for not giving us an awning. He took us into the roofed timekeepers' box for a sample two minutes, and we rejoiced that our stand was unroofed. The riders plainly found 182.98 laps pretty exhausting, but they had a picnic compared to the men with the watches, whose roofed box served as a noise-catcher. Moreover, they had to spot every man as he passed, and record somewhere about 13,000 separate lap times to a fifth of a second apiece. The time and lap scores required very special organisation under such circumstances, and I greatly admired the system adopted, and the precision of the men who worked it.

Wanted, a British Super-twin.

IF REALLY marvel that more of the firms who try to carve out for themselves a notch in the

British motor cycle industry do not seek to develop a British super-twin of the 7-9 h.p. variety. In this type we are still absolutely outclassed by the American Harleys and Indians. It was frightfully humiliating to watch the Yankees romping away from our own machines, and nauseating to watch two big British twins slowly reeling off their concluding laps several hours after our better singles had finished the distance. The sales of the Harleys and Indians prove that there is an excellent market in this country for a good 7-9 h.p. machine of the sports or semi-sports type. We have very largely neglected this model. In the race our principal representatives were the Matchless (a standard sidecar type, assembled on a track standpoint, even if it had been designed for racing, which it was not) and the Zeniths—a mixed lot with a variety of engines, and all of them equipped with the belt drive. When we take a particular type of motor cycle seriously, we can lick creation with it. We have never taken the 7-9 h.p. seriously.

A New T.T. Course.

THESE reflections influence me to hope that a new T.T. course may be found, if not in 1922, at any rate by 1923. Perhaps in Ireland. Perhaps in England. Perhaps in France, though only as a last resource, in case Parliament and local authorities prove obscurantist. The 500-mile race showed very clearly how the Manx course handicaps the 3½ h.p. machine; relieved of the twists and corners of Manxland, it absolutely slaughtered the 350 c.c. class; which had outshone it in the Island. If we can only find a course which permits unfettered speed, the 500 c.c. machines will be shown in their proper colours; and we should have a chance to

Occasional Comments.—

institute a 1,000 c.c. class. No doubt, the Indians and the Harleys would fight it out the first year. In the second year we should see new models of the Zenith and Matchless pressing the Yankees hard. In the third year we should see a British win. By the fourth year British twins would be selling freely to those enthusiasts who prefer 7-9 h.p. for general road work. At present, when the country is sinking to the level of what economists call a "debtor nation," we are shovelling much good money out of the country in payment for foreign twins largely because—let us admit it frankly—imported twins are ahead, just as British single-cylinders have held a lead because they are the specialised products of single factories.

The Sportsmouth Road.

COMMONLY called plain "Portsmouth" Road. It always tantalises me. Its surface is so super, its corners so easy, its gradients so mild that it simply shrieks for a blind. But what with the police and the traffic, one generally has to burble along it at just under twenty with muscles tense against throttle and brakes, one eye on the speedometer, and the other spotting hard for men in blue. On July 2nd I struck the Sportsmouth Road on something very fast at an hour of the morning when lighted lamps are legally obligatory. Gadzooks, how I hummed up it! Here and there one saw a man in blue, erect in some recess at the road-side, and practising what every constable learns in his recruit's course, *i.e.*, going to sleep standing up, whilst wearing a deceptive appearance of alertness. I knew their eyes were numb with sleep, and none of them got my number. Couldn't we get Parliament to close the Sportsmouth Road for two days every summer, and hold the T.T. on it?

Bobby-Dodgers.

ANY old acetylene lamp gives enough light for a not too keen sighted reader to maintain touring speeds in strange country on a clear night. The innocent takes it for granted that the same applies to all systems of electric lighting. I think it only fair to the public to remark that many of the cheaper and simpler electric outfits only furnish sufficient light for comparatively cautious travelling, and are therefore known to the initiated as "bobby-dodgers." For example, a set which depends on a dry battery or an accumulator minus a dynamo must be designed for a very limited rate of discharge. Limit the flow of current, and you limit the light. Similarly, such outfits as my own B.T.H. Sparklight merely bottle up the surplus output of the magneto, and do not utilise a source of electricity specially designed to provide enough light for speed. In other words, one of these compromise installations is simply ideal for local work, where you know the roads, the corners, and any special danger points, and where a good average speed is not essential; they fulfil the law. But for serious riding on a powerful 'bus in unknown districts a dynamo outfit is still desirable, and may long remain so.

PREPARING FOR THE ANGLO-DUTCH INTERNATIONAL CONTEST.

Dutch motor cyclists are leaving no stone unturned in order to find the best team to represent them in the forthcoming Anglo-Dutch trial. The various clubs have held eliminating trials, the winners of which will constitute the Dutch team. The above illustrations depict incidents in the final trial held last week in Holland.

TAKING A MOTOR CYCLE to the CONTINENT.

Information of Use to the Motor Cyclist who intends to Tour on the Continent, to witness the Grand Prix, or to Journey to Switzerland to see the International Six Days Trials.

THE touring season and the occurrence of many important Continental events combine to make desirable some information regarding the costs likely to be entailed and the formalities to be gone through on taking a motor cycle to the Continent.

In the first place it is necessary that the intending traveller should become a member of one of the motoring organisations, either through a club affiliated to the Auto Cycle Union, as a direct member of the Auto Cycle Union, or as a member of the Automobile Association. A motor cyclist who attempts to do without the help of these organisations will be worried by a number of tiresome details.

As regards the formalities, these are comparatively simple. First and foremost the motor cyclist must get an international travelling pass, which costs 10s. 6d., and takes the place of a driving and machine licence in whichever country he may be travelling. Next a passport is necessary: this costs 8s. A visa for France costs £1, while the Belgian visa has been done away with altogether. For Italy and Holland the visa costs 8s., and for Switzerland and Spain 5s.

Now, in France every motor cyclist has to pay to the Customs a fee of twelve francs, which licenses a motor cycle in that country for one year.

Customs Formalities.

We now come to the question of Customs formalities. Motor bicycles are introduced into France, Holland, and Belgium free on presentation of a special Customs card, but duties are payable in advance in the case of sidecar outfits in these countries.

In France, when a sidecar is attached, the accompanying scale will give the information required. Motor cycles of British makes are charged 220 francs per 100 kilogs., American makes 250 francs, and other makes 330 francs. Sidecars, which are charged on the body only, and weigh less than 125 kilogs., are charged 120 francs for British makes, 150 francs for American, and 180 francs for other makes. These rates are minimum; therefore, any machine or sidecar not

turning the scale up to the specified weights is chargeable exactly as above. Those exceeding are dutiable proportionately higher by the above basis. The charges for motor bicycles must also be multiplied by the co-efficient 1.3, while the charges for sidecars must be multiplied by the co-efficient 1.2. As an example of this basis of reckoning the duty, we quote the following: A British motor bicycle weighing 100 kilogs. net is charged 285 francs, American makes 325 francs, and other makes 429 francs. The minimum payment on a British sidecar weighing 125 kilogs. is 144 francs, on American makes 180 francs, and on other makes 215 francs. In the case of a sidecar outfit of non-European make, imported through a European country, an extra (*entrepot*) tax of 3.60 francs per kilog. net on both machine and sidecar must be charged.

Belgium, Spain, and Italy.

Fortunately, in the other countries, the duty is charged on a simpler basis: but in Belgium the motor cycle and sidecar are charged at £7 4s. per cwt., and in Norway and Sweden 15% *ad valorem*. These two latter countries charge duty at the same rate for solo motor cycles and also for sidecar outfits. In Spain a solo machine is charged at the rate of 3s. 6d. per lb., but if a sidecar is fitted at £5 17s. per cwt. Lastly, motor cycles and sidecars are usually admitted into Italy on payment of a deposit of £3, returnable on application when leaving the country within three months. The R.A.C., however, is endeavouring to make special arrangements with the Italian authorities. Motor bicycles and sidecar machines can be introduced into Switzerland on payment of £2 per cwt.

Now, the sum of money demanded in each case can be deposited with the association to which the motor cyclist belongs, and is refunded to him on his return to this country.

The following is the scale of charges for the transport of motor bicycles by the principal cross-Channel routes:

Great Eastern Railway: Harwich to the Hook of Holland. Boat departs 10.15 p.m. Motor bicycles—accompanied by

owner, £1; unaccompanied, £1 2s. 6d. Motor cycles and sidecars—accompanied, £2; unaccompanied, £4 (plus 5s. transmission fee). Vehicles to be alongside at 3 p.m. for the 10.15 p.m. boat. The rates for Harwich to Antwerp are the same as to the Hook, but the boat departs at 10.20 p.m., and vehicles must be alongside at 3 p.m.

South-Eastern and Chatham Railway: Dover to Calais. Motor bicycle, £1; motor cycle and sidecar, £2. London to Calais: Motor bicycle, £1 10s.; motor bicycle and sidecar, £3. Vehicles required alongside at 9 a.m. for the 10.30 a.m. boat, and at 12 noon for the 1.10 p.m. boat. The fares are the same in the case of Folkestone and Boulogne, but machines are required alongside at 6 p.m. for the 7.30 p.m. boat, while the fares for Dover to Ostend are not yet available.

London, Brighton, and South Coast Railway: Newhaven to Dieppe. Boat departs 11.45 a.m.; machines to be alongside at 9.30 a.m. Motor bicycles 12s. 6d.; motor cycle and sidecar, £1 11s. 6d. In the latter case 300 lb. allowed; excess weight charged at 9d. per 10 lb., or part of 10 lb.

London and South-Western Railway: Southampton to Havre. Boat departs 11.30 p.m.; vehicles to be alongside at 8.30 p.m. Motor bicycle and sidecar, £3 3s. 9d. at owner's risk, £3 2s. 6d. at company's risk; motor bicycle, 11s. 5d. at owner's risk, 14s. at company's risk; tricars (not exceeding 7 cwt.), £4 1s. 3d. at owner's risk, £5 12s. 6d. at company's risk. The rates to St. Malo and the Channel Islands are the same as those stated above.

Passengers' Fares.

The passengers' fares are as follows: Harwich to the Hook, or Harwich to Antwerp, £2 first single; no return. Dover to Calais, 17s. 10d. first single, £1 15s. 8d. return. Folkestone to Boulogne, 15s. 10d. first single; £1 11s. 8d. return. Newhaven to Dieppe, £1 15s. 6d. first single; £3 7s. 10d. return. Southampton to Havre, £2 2s. 9d. first single; £3 6s. 3d. return. Southampton to St. Malo, £2 1s. 11d. first single, £3 4s. 7d. return.

HOW TO REACH THE GRAND PRIX COURSE.

TO LE MANS.

Southampton to Le Havre or Honfleur,	105 miles.
Honfleur to Le Mans ..	102 "
Newhaven to Dieppe ..	64 "
Dieppe to Le Mans ..	157 "
Folkestone to Boulogne	29 "
Boulogne to Le Mans ..	220 "
Dover to Calais ..	22 "
Calais to Le Mans ..	300 "

The Grand Prix course is approximately 10½ miles long, and, as will be seen from the inset, includes four acute corners. Competitors in the motor cycle race will cover the circuit twenty times in the 350 c.c. and 500 c.c. class; the 250 c.c. machines will cover fifteen circuits.

LE MANS and
The Course

Large numbers of motor cyclists will doubtless desire to witness the Grand Prix race on July 24th. For the benefit of those travelling to the course by road, the above map has been prepared, showing the main avenues of approach.

THE 4½ h.p. HUMBER.

ENGINE: 75 × 68 mm. = 700 c.c.
flat twin.

CARBURETTER: Claudel-Hobson.

LUBRICATION: Mechanical.

SPECIFICATION.

TRANSMISSION: ¼ in. chains.

GEAR BOX: Humber three-speed
clutch and kick-starter.

TYRES: 26 × 2½ in.

FORKS: Druid type.

FITTINGS: Touring or T.T.
optional.

WEIGHT: 275 lb.

PRICE: £140 solo.

THAT the 4½ h.p. Humber is a reliable and powerful mount has been amply proved by the results of this year's trials—particularly the stock machine event, in which it was one of those which gained a first-class award. How a machine behaves, however, and just how it would or would not appeal to the average buyer, can only be gauged after an actual test on the road. Thus it was with some interest that we seized an opportunity of a fairly extended trial of the latest Humber as a solo mount.

An Uneventful 400 Miles.

The test proved most successful, and seldom have we enjoyed as pleasurable a spell of riding. During 350-400 miles it never even seemed likely that the toolbag must be opened (nor was it), and a second or third kick never failed to start the engine.

The Humber cannot be regarded as a lightweight—it weighs well over 300 lb. fully equipped—the wheelbase is fairly long, and the riding position is unusually far back. However, it quickly proved as docile as any lightweight; indeed, possibly more so, and steadier. A single-lever Claudel-Hobson carburetter allowed the well-balanced flat twin to tick over, with the throttle lever in the shut position, so nicely and evenly that one could vault off the machine and walk alongside, controlling by one hand, *when in second speed*. This we demonstrated several times for the benefit of unbelieving friends.

Naturally, therefore, traffic riding in low gear became merely a matter of balance. And the balance of the Humber is excellent, so good at all speeds above 12 m.p.h. that one felt tempted to all sorts of acrobatic tricks. On grease, too, the same feeling of security prevailed, and, although some of our riding was over treacherously wet roads, there was a noticeable absence of any tendencies to skidding—"noticeable" after two big singles minus efficient transmission shock absorbers! Possibly an inherent caution born of riding many mounts in all weathers saved us, but undoubtedly our wet-weather averages on the Humber were often as high as our normal dry-weather speeds on the same journeys.

No Vibration at Speed.

Regarding maximum speed, it is sufficient to say that there are few touring motor cycles on the road to-day that are appreciably faster than the machine under review. At full throttle there is the same absence of vibration that is so pleasingly evident in touring speeds.

Both the potterer and the hard rider will find that the engine is apparently quite tireless; it runs with just as little effort at the end of a 200 mile jaunt in the first ten miles. Indeed, like the luxurious h.p. car, its speed is inclined to be deceptive, and speedometer is almost a necessity for the rider who would keep within the law!

Lead Tests of New Models.—

Gear changing required very little practice, and the second neutral position in the gate (next to top) proved very convenient more than once, especially so the clutch, delightfully delicate in engagement, was inclined to drag very slightly.

With footrests the pedal for the rear brake seemed so far forward for comfort, but the rider soon finds that he can fling his leg about indiscriminately without fear of wobbling complications. The brake itself—acting as a dummy belt on a dummy belt—is amply powerful, but the machine slows down well on the throttle that it is seldom necessary to use it.

Hill-climbing Capabilities.

Edge, a well-known Midland test hill, which not all or $4\frac{1}{2}$ h.p. solo mounts surmount in top gear, was climbed, with due respect for a wet end, at a speed which never dropped below 22 m.p.h. — according to Bonniksen—and the way up the gradient on the highest ratio.

On a sixty-mile run at a good average speed fuel consumption worked out at approximately 75 m.p.g.; at the engine was not spared.

Of course, the most distinctive, and almost proverbial, feature of this machine is its silence. So

well known is this quality even, and perhaps especially, to the man in the street that it does not seem necessary to emphasise it. Very, almost lamentably, few other makes deserve to be classified with the Humber in this respect.

Although the photographs in conjunction with the opening specification should serve to refresh the reader's memory regarding the general design, a few words on some of the mechanical features may not be amiss.

Oil in the crank case sump normally keeps the engine lubricated, but there is an auxiliary drip feed for emergency use. We found that, however much the engine was flooded with lubricant, there was no tendency to oil up the plugs, nor did there, on the other hand, seem to be any overheating when the drip was entirely shut off. The oil tank, by the way, is a separate cylindrical compartment set across and inside the main petrol tank.

An ingenious assembly permits the valves, complete with their seatings and manifolds, to be removed without disturbing the cylinder.

Mudguarding is good, and, as a further protection, there is a large undershield, extending beneath the power unit.

Hairpin cornering is a matter of great ease on the Humber, and although the footrests in this case are unusually high up, the balance of the machine gives one perfect confidence.

The $4\frac{1}{2}$ Humber flat twin, a mount that answers splendidly as a double purpose machine. The engine, which has a bore and stroke of 75×68 mm., is particularly smooth, yet sufficiently powerful for sidecar touring in any district.

TECHNICAL ITEMS OF THE 500 MILE RACE.

Lessons to be Learned from a Study of the Successes and Failures of the Competing Machines.

A PART from those competitors who set out with the intention of winning the Miller gold cup or a "class" prize in the 500 mile race, quite a number of manufacturers seized the opportunity of trying out new or existing models under strenuous conditions.

Amongst the most interesting of these entries were those of the two standard Matchless machines, ridden by J. W. and S. C. Woodhouse. These machines were only erected the day before the race and received no preliminary testing. Standard Matchless spring frames were used, but all unnecessary fittings were removed. It was very noticeable that this pair of machines held the track well; they lapped consistently side by side, and finished with an average speed of 53 and 56 m.p.h. respectively.

An Anzani V Twin.

Quite a collection of engines were fitted in various Zenith machines. The standard 8 h.p. Jap, a Harley-Davidson, and the new 8 h.p. overhead valve British Anzani. The last mentioned engine has several interesting features. Having a bore and stroke of 83 x 92 mm. (996 c.c.), the valves are placed vertically in the head, and are operated by rockers and push rods in the normal manner. A large oil sump with transverse radiating ribs form part of the crank case, and a mechanical oil pump is driven from the timing gear. In the particular machine used for the race a tachometer, driven from the crankshaft, was fitted in addition to a speedometer—a combination of instruments which should provide some interesting information with regard to transmission and wheel slip at high speeds. The heads of the Anzani cylinders are

detachable, and the Zenith gear was fitted beyond the outside flywheel.

Two of the new Morris-Warne 250 c.c. engine put in an appearance, both in attractive duplex triangulated frames. One engine was fitted horizontally with direct belt drive, and the other vertically driving through a Moss gear box. In the engine itself there are several interesting features, for the cylinder is of aluminium fitted with a thin steel liner, a separate aluminium head helping to secure the liner. A cast iron piston is employed. An aluminium cylinder was also fitted to Milner's Levis, which was similar to the T.T. mounts, except that the primary drive was fitted outside the flywheel.

Aluminium pistons were fitted to several machines including Le Vack's winning Indian. On being stripped for examination after the event these pistons were in perfect condition—in fact, except for a trace of carbon on one corner of the head, they might have just come off the grinding-machine and been run in. The Indian, by the way, is a twin of the T.T. single, and, except for a 3½ gallon petrol tank and duplex down tube, resembles the standard product in almost every respect; a gear ratio of 4.25 to 1 was employed.

A Fast Flat Twin.

The flat twin Coventry Victor in a neat short wheel base frame put up a very fine performance, and did well to win the 750 c.c. class. In this class the Trump-Jap, ridden by McNab, ran regularly, and the Bashall brothers on the overhead exhaust valve Martinsydes put up a fine performance.

In addition to the distinctive twin torpedo tank the Martinsydes were using a new fork of Martinsyde

Technical Items of the 500 Mile Race.—

Design, which is reported to have admirable steering qualities. Watson-Bourne spoke highly of his Black-bone-engined Rex, with which he had the misfortune to blow out a valve cap.

The Single-cylinder Machines.

V. Horsman's 500 c.c. Norton was the first British machine to finish the race, running fourth to two Italians and a Harley-Davidson. F. G. Edmond's side-by-side valve Triumph ran second in the 500 c.c. class, and was followed by G. Shemans's o.h.v. Triumph. The latter was dogged by clutch slip from the early stage, and suffered a leaky petrol tank later.

Of the 350 c.c. machines, N. Norris's Ivy made one of the best outstanding performances of the day, and led consistently throughout; the engine is a standard sport production, and was in excellent mechanical condition over the race.

B. Kershaw's 1 h.p. New Imperial had a comfortable win in the 250 c.c. class, but A. Miller's Levis was marvellously, and actually improved its lap times after the first 100 miles. Savage's Hobart finished well. Troubles are not without interest, since they are from them

that experience is gained, and one or two causes of grief were rather unduly obvious. At least eighteen different troubles of various types were reported. Two valves and one handle-bar broke during the race. Several tyres blew off the rims at speed, and nearly a dozen serious accidents. A very large number of engines refused to start properly after replenishment attempts, and many machines overshot their replenishment stops through absence of proper brakes. This last point is most important, especially in an event of this nature, and a serious accident due to this cause was narrowly averted, two helpers and a competing machine being knocked over. Valve caps, compression taps, and sparking plugs, blew out of cylinders, and several tanks developed leakages, but, beyond these, most other troubles were confined to single instances. It was noticeable that single-lever carburettors were fitted to the winners of each class, with the exception of the Binks on Horsman's Norton.

Reverting to the matter of leaking tanks, those who have not visited Brooklands may consider that such things should not happen on a track, under the misapprehension that the surface is like a billiard table. It is not. Far from it. There are roads much better in this respect.

Flexible Oil and Petrol Pipes.

A new accessory, in the form of flexible petrol and oil pipes, appeared on one or two machines: it is the product of the Petroflex Co., of Watford, and resembles a rubber pipe encased in a wire spiral. Petrol resisting tubing of other types was also in evidence, and, judging from the number of broken petrol and oil pipes, there were not a few who would

have done well to try some such fitting.

It is hard to blame tyres for wear under such trying conditions; but it is, perhaps, worthy of mention that the Dunlop Magnum fitted to the front wheel of Shemans's Triumph finished the race with the mould marks still visible, in spite of the fact that it had previously carried the machine through the Senior Tourist Trophy and several practice laps.

It was noticeable that comparatively few riders really lay down to save wind resistance.

Le Vack, Dixon, and Horsman were notable exceptions, and probably gained a considerable advantage thereby, though the flapping racing jackets must have been responsible for a perceptible slowing down of the faster men. These flimsy racing colours are admirable from a spectator's point of view, but most impractical in their present form.

Organisers of future 500 mile races will have to decide whether it is a test for man or machine. If it is further to develop the motor cycle, the human factor must be removed as far as possible. For that reason each machine should be allowed two riders, who might change over at intervals, thus eliminating any liability to failure as a result of the driver's weariness.

Altogether, the race was a decided success, and Captain Miller is to be congratulated on instituting a most useful and informative competition, which must have influence on the development of the motor cycle.

COMPETITORS IN THE 500 MILES RACE AT BROOKLANDS.

On the Byfleet banking. King Smith (Morris-Warne) and Miller (Martin) in tandem.

It will be observed that these riders kept well at the bottom of the banking.

CLUB NEWS

Proposed Prestwich and District M.C.C.

Riders in the Prestwich (near Manchester) district who are desirous of supporting a local club should get in touch with Mr. H. Hannaford, 25, Deyne Avenue, Prestwich, Manchester.

Harrogate and District M.C.C.

The winner of the president's trophy trial, which was held on July 3rd, was F. H. Smithies (4½ B.S.A. sc.), who lost 210 marks; T. W. Monkhouse (4 Triumph sc.), who lost 214 marks, was runner-up; and third place was occupied by G. Hill (2½ Triumph). There were twenty-nine entries, twenty-seven of whom started.

Cardiff M.C.C.

A successful reliability trial, over a secret course, was held on the last Saturday in June for the Alex. Thom Trophy. Fourteen competitors started, and five completed the course. The results are as follows: Alex. Thom Trophy and replica, Ivor Thomas (3½ Sunbeam); gold medals, Alex. Thom (3½ Scott) and Jack Salter (4 Bradbury); silver medal, E. R. Bevan-Darley (4 Triumph).

Plymouth District M.C. and L.C.C.

Twenty-seven competitors took part in the recent speed trials. Both flying and standing starts were imposed, and the course was about half a mile of the Chillaton Road, near Tavistock. M. Lucy, riding a 3½ Norton, made the fastest time of the day in 24.9s. Results: 500 c.c. SOLO (Novice).—A. Endicott (3 A.B.C.), 27.3s. 250 c.c. SOLO (Expert).—F. Medlin (2½ New Hudson), 37.4s. 750 c.c. SOLO (Expert).—I. Spooner (3½ Sunbeam), 26.8s. 350 c.c. SOLO (Novice).—F. Brown (2½ Douglas), 38.8s. 500 c.c. SOLO (Expert).—M. Lucy (3½ Norton), 24.9s. 350 c.c. SOLO (Expert).—H. F. Flower (2½ A.J.S.), 31.6s. 1,000 c.c. SOLO (Expert).—M. Dawes (3½ Sunbeam), 26.5s. 1,000 c.c. SIDECARS.—I. Spooner (3½ Sunbeam sc.), 30.7s.

Taunton and District M.C.C. and L.C.C.

A "treasure hunt" was recently held, and the route, which was given to each competitor before starting, led over some very difficult country. The treasure was located one and a half miles from Taunton, but the route as mapped out covered a distance of about thirty miles.

Redditch and District M.C.C.

The results of the speed trials held last month are as follows:

TIME CLASSES.

350 c.c. SOLO.—1, F. Wood (2½ Verus) and T. Ward (2½ Verus), tie; 2, T. Weaver (2½ Verus); 3, Gem. Smith (2½ Morris) and J. Doshier (2½ Enfield), tie. 600 c.c. SOLO.—1, W. E. Smith (3½ Norton); 2, Gem. Smith (3½ Martin); 3, F. Simmonds (3½ Norton). UNLIMITED SOLO.—1, W. E. Smith (3½ Norton); 2, T. Weaver (5-6 Verus); 3, F. Simmonds (3½ Norton). 750 c.c. PASSENGER.—1, W. E. Smith (3½ Norton); 2, T. Weaver (5-6 Verus). UNLIMITED PASSENGER.—1, W. E. Smith (3½ Norton); 2, T. Weaver (5-6 Verus). UNLIMITED FOUR-WHEEL.—1, J. Cave (8.7 G.N.); 2, G. Silk (8.7 G.N.). FASTEST TIME OF THE DAY.—W. E. Smith (3½ Norton).

FORMULA CLASSES.

350 c.c. SOLO.—1, J. Doshier (2½ Enfield); 2, T. Weaver (2½ Verus); 3, T. Ward (2½ Verus). 600 c.c. SOLO.—1, W. E. Smith (3½ Norton); 2, J. Doshier (2½ Enfield); 3, Gem. Smith (2½ Morris). UNLIMITED SOLO.—1, J. Doshier (2½ Enfield); 2, W. E. Smith (3½ Norton); 3, C. Hall (2½ Lewis). 750 c.c. PASSENGER.—1, W. E. Smith (3½ Norton); 2, T. Weaver (5-6 Verus). UNLIMITED PASSENGER.—1, T. Weaver (5-6 Verus); 2, W. E. Smith (3½ Norton); 3, S. Bright (6 Enfield). UNLIMITED FOUR-WHEEL.—1, J. Cave (8.7 G.N.); 2, G. Silk (8.7 G.N.); 3, F. English (11.9 Albert) and C. Brown (9.5 Standard), tie. HANDICAP.—H. Spencer (winner). FREAK HILL-CLIMB.—1, W. Swiften; 2, E. Keay.

The awards in the President's Cup Reliability Trial are as under:

PRESIDENT'S CUP AND GOLD MEDAL (best performance).—J. Cave (8 G.N.). GOLD CENTRE MEDALS.—J. Cave (8 G.N.), T. Weaver (2½ Verus), and J. Doshier (8 Enfield). GOLD CENTRE MEDAL (for best performance by rider not having previously won an award in a reliability trial).—J. Cave (8 G.N.). SILVER MEDALS.—K. Holden (5-6 Raleigh), A. Taylor (6-7 B.S.A. sc.), H. Spencer (2½ Enfield),

G. Baragwanath (3½ Sunbeam), L. Hadley (8 Enfield), G. Silk (8 G.N.), H. Poole (4½ B.S. sc.), C. Johnson (4 Verus), and C. Machin (B.S.A.).

BRONZE MEDALS.—G. Keay (3½ B.S.A. sc.), Smith (3½ Norton), H. Perry (6-7 B.S.A. sc.), S. Bright (8 Enfield sc.), G. Hill (2½ Sparta), H. Gibbs (3½ B.S.A. sc.), F. Jakeman (8 Matless sc.), and B. Kershaw (2½ Verus).

North Lindsey A.C.

Speed trials were held in Holme La on July 2nd over a half-mile course which had a rising grade of about 1 in 160. The weather conditions were favorable, and a good muster of spectators witnessed the event, which was electrically timed. The results were as follows:

CLASS 1 (up to 275 c.c.).—1, Mrs. M. C. Jenkinson (2½ Velocette), 35½s.; 2, H. A. L. Thurston (2½ Radco), 47s. CLASS 2 (up to 350 c.c.).—1, Mrs. M. C. Jenkinson (2½ Velocette), 31s.; 2, H. A. Robinson (1½), 34s. CLASS 3 (up to 600 c.c.).—1, R. Towle (3½ Norton), 28½s.; 2, L. W. Bainton (3½ Norton), 29s. CLASS 4 (up to 1,000 c.c.).—1, F. G. How (8 Zenith), 27s.*; 2, L. W. Bainton (3½ Norton), 29s. CLASS 5 (unlimited, on formula).—1, Mrs. C. Jenkinson (2½ Velocette), 869 (figure of merit); 2, R. Towle (3½ Norton), 919. *Fastest time of day.

Dublin and District M.C.C.

The beach races at Portmarnock, held on July 2nd, were somewhat marred by the condition of the sand, which was bumpy, and had a number of treacherous soft places. Chief favourite at the event was S. J. Redmond, whose 3½ h.p. single cylinder Indian was a winner from scratch line on two occasions. Results with handicap times are as follows:

SOLO (under 301 c.c.), distance 6 miles.—1, E. Green (2½ Enfield), 12s.; 2, T. Stevin (2½ Velocette), 15s.; 3, E. C. Draper (2½ Metro-Tyke), 15s. SOLO (between 301 and 550 c.c.), distance 6 miles.—1, S. Redmond (3½ Indian), scr.; 2, Cathcart (3½ Norton), 55s.; 3, J. McCullagh (3½ Norton), 55s. SOLO (over 550 c.c.), distance 6 miles.—1, S. Redmond (3½ Indian), scr.; 2, J. A. Carville (3½ Triumph), 2m. 30s.; 3, H. J. McInally (5 Indian), 2m. finished first but was disqualified for only inside the turning point flag on his last lap. SIDECARS (unlimited), distance 6 miles.—1, A. Adair (4½ B.S.A.), 2m. 40s.; 2, J. Hall (Harley-Davidson), 15s.; 3, P. Smith (7 Indian), scr.

News.—

Birmingham M.C.C.

The annual hill-climb, which will be open to all members of clubs in the Midland Centre A.C.U., is to be held on Den Hill, Ilmington, on Saturday.

Exeter M.C. and J.C.C.

Held on Dartmoor on a recent Saturday the reliability trial for the Ford resulted in the following awards made:

Ford Shield and gold medal), A. M. Knill (4 h.p. sc.), 2s. error; 2 (silver cup), L. Peters (Norton), 10s. error; 3 (gold medal), E. Woodale, 15s. error; 4 (silver medal), D. Physick (Norton), 25s. error; 5 (silver medal), G. R. Age (4 Triumph sc.), 28s. error. Additional medals were also awarded to L. Vicary (8 h.p. sc.), J. Eddy (4 Excelsior), L. Staggs (5-h.p. Eagle), T. Williams (4 Triumph sc.), and E. M. Chudleigh (6 h.p. sc.).

Edinburgh and District M.C.

The annual team trial for the Dobson Trophy was held at the end of June over a fifty-mile course, which included a hill-climb of Hartree Hill. Nine teams entered, but only six faced the starter, and of these the Edinburgh and District M.C. were easy winners. The results follow:

Edinburgh and District M.C.C., J. R. Alexander (2½ Douglas), G. M. Black (3½ Norton), 3. Grinton (7-9 Harley-Davidson sc.), 2s. lost; 2. Clackmannan County M.C.C., 35s. lost; 3. Glasgow Western M.C.C. No. 1, 62s. lost; 4. Glasgow Western M.C.C. No. 2, 89s. lost.

Fastest time of the day on the hill (3s.) was made by G. M. Black (Norton).

On Coldfield and South Birmingham A.C. results of a well-supported hill-climb on Kenridge Hill, on July 2nd, were as follows. The formula used was that recommended by *The Motor Cycle* (capacity multiplied by time (squared) divided by weight):

CLASS 9.		
Rider and Machine.	Time, Sec.	Fig of Merit.
N. Roberts (2½ New Imperial)	57.8	2657.27
Jennings (2½ Cedus)	62.8	3465.85
W. Thrush (2½ Levis)	64.4	3933.69

 July 21.—North Wales M.C.C. Speed-judging Contest.

The £200 Deans-gate Cup presented by the Colmore Depôt, Manchester, to the North-western Centre A.C.U., as premier award in this centre's team trial. The holder is Hugh Gibson.

**Surbiton and District M.C.C.**

Over a course of forty-three miles the evening trial for the Briller Cup was run off on Wednesday, the 6th inst. Bagdon, White Downs, and others of the Surrey Hills were included, and forty-two competitors faced the starter. Kaye Don, riding a 3½ h.p. Zenith-Bradshaw, secured the cup, and made a non-stop run with only 2sec. time error. The following were awarded silver medals:

V. Cayford (Zenith), R. C. Staunton (Triumph), R. A. Green (Norton), J. S. Bennett (M.T.), C. D. Michaels (Zenith), W. R. Preston (Sunbeam), R. C. Charlesworth (Zenith), T. O. M. Sopwith (Hawker), L. H. Wells (Hawker), L. Gummer (Triumph), A. Love (Norton), W. H. Wells (Norton sc.), L. Peaty (Hawker sc.), R. B. Wiffin (Morgan), L. J. Freeman (B.S.A. sc.), H. W. Gledinings (Rex sc.), H. E. K. Saltell (Morgan), S. T. Green (Indian sc.), G. C. Griffiths (A.C.), J. Abbott (Zenith), R. N. Stewart (Triump), and A. Ellison (Ellison).

A Section devoted to Club Announcements will be found on Supp. xlvii.

T. C. de la Hay winning the 500 c.c. sidecar class of the Kidderminster, Stourbridge, and Wolverhampton inter-club hill-climb held at Hopton Bank, near Cleobury Mortimer.

MORE MID-YEAR MODELS.

New Lightweights. Low-priced Solo and Sidecar Outfits.

IN last week's issue of *The Motor Cycle* we gave particulars of several recently-introduced models, and in some cases it appeared that serious effort was being made to market machines at a lower price than those that have prevailed for some time past. On this and the following page we are able to illustrate a further batch of mid-year models of which the prices are certainly very attractive to those who have been waiting to purchase comparatively low-priced machines.

The first of these is a genuine two-speed lightweight of 112 lb., at present unnamed, and which, it is expected, will be marketed at thirty-eight guineas.

Mr. W. F. Hooper, 10, Genoa Road, Anerley, London, S.E., who was responsible for the Superb Four, is the designer.

The motive power is a small but efficient 2 h.p. single-cylinder four-stroke engine of 60x44 mm. bore and stroke (125 c.c.), which gives the horse-power stated at 5,000 r.p.m. The engine has overhead valves and a detachable head,

A real lightweight which it is expected will be marketed at 38 guineas with two-speed gear

On the road the machine behaved quite well, and it was taken for a short run up Sanderstead Hill, which is a long, tiring pull for so small a mount; nevertheless, two-thirds of it were taken on top gear. We found the control to be very simple,

ever, that it is eminently suited for ladies. Arrangements have been made for production of this machine in quantities in a large and well-equipped works close to London.

Frame details of the little unnamed lightweight.

while the gear-driven magneto is bolted behind the crank case.

Of the single-lever variety, the carburettor is of a new type known as the Willis, details concerning which are not yet available, as the instrument is the subject of an uncompleted patent. A duplex frame and spring forks of rather unusual design are used.

the carburettor to respond to the slightest touch of the throttle opening, while the gear was changed by a lever similar to a spark lever mounted on the handlebars. The machine steered well, and was comfortable; but the "revving" of the tiny engine was somewhat disconcerting to anyone used to the larger type of motor cycle. There is no doubt, how-

As its name implies, the Hack miniature is mainly intended to fill a useful gap for utility work

A Single-gear Miniature.

True to its name, the Hack miniature is mainly intended for short distance work; it would also appear to be a suitable mount for a lady.

Its motive power is a Simplex engine slightly modified and adapted to scooter. The magneto gear wheels are enclosed, and the drive is by chain to the rear wheel, the gear ratio being 10 to 1. A clutch is used merely to disconnect the engine from the wheels, and not for starting purposes. After the compression release has been opened the clutch is withdrawn by means of the same lever, and consequently the engine cannot race when the clutch is engaged. The frame is strongly constructed, but is designed to "give" sufficiently to render it just flexible.

A £70 Sidecar Outfit.

£70 for a sidecar outfit is surely the lowest-priced machine of its class on the market. This is the Sirrah, a well-known Union-engined motor cycle produced by a well-known concern for several years. R. O. Jones, of Bellbarn Road, Birmingham, is offering it in Birmingham, and with its very complete sp-

The Sirrah solo mount, a £54 machine with Union engine and Burman two-speed gear.

More Mid-year Models—

ation (including Brampton forks, Burman two-speed gear, clutch, and kick-starter, Avon tyres, and sporting sidecar) is becoming very popular. £54 is the price of the solo machine.

Another Newcomer.

The Mars is a newcomer, but is produced by an engineer who, up to quite recently, has been works manager of old-established motor cycle firms. One model is made, but offered with Villiers, J.A.P., or Blackburne engine, single-gear, or equipped with plain two-speed or two-speed clutch and kick-starter.

Equipment and finish are quite up to the best standards. For example, Brampton Bi-flex forks with two vertical springs are fitted, and all other proprietary items are of the best class. The Mars machines are lighter than usual, 130 lb. being the weight of the single-gear Villiers model selling at £48, while with clutch and kick-starter it is only 150 lb., and is offered at £64. The single-gear J.A.P. model is £58, plain two-speed £64, and two-speed clutch and kick-starter model £70. The fully-equipped Blackburne-engined model will be in the neighbourhood of £80. The manufacturers are Mars, Ltd., Greyfriars Lane, Coventry.

The H.B.

Motor cycles bearing the distinctive initials H.B. are now getting fairly well known. They are made by Hill Bros., of Wolverhampton, a centre famous for the quality of its productions, and this firm is endeavouring to maintain this reputation. The H.B. is a good-class production, and quite above the average machine built up of proprietary units. The frame details are exceptionally good, the mudguarding and brakework especially so. A saddle tank fits over a well-designed frame having straight tubes. Two models are made, having 2½ h.p. and 4 h.p. engine and two and three-speed gear boxes.

For Sporting Sidecarists.

Similar in general specification to the standard 4 h.p. machine, the Sheffield-Henderson is now marketed as a sporting sidecar outfit. In this case the rear frame is rigid, and in conjunction with a specially tuned Blackburne engine, a T.T. Amac carburetter, and a Sturmey-Archer close ratio gear box (if required), it makes a very attractive sidecar mount. A semi-streamline racing sidecar is fitted. Henderson Motors, Ltd., 73, Fitzwilliam Street, Sheffield, are the makers.

The Vindec Outfit.

Quite one of the handsomest sidecar outfits on the market, although following more or less standard lines, is the Vindec, marketed by Brown Bros., Ltd., Great Eastern Street, London, E.C.2. The motive power is provided by an 8 h.p. J.A.P. engine (85.5×85 mm. = 376 c.c.).

In the particular model under review, the transmission is by chain to a Sturmey-Archer gear box, and thence by belt to the rear wheel. An extension of the primary chain cover serves to protect the magneto drive. In future models all-chain drive will be provided if desired. Detachable and interchangeable wheels are fitted, the belt drum running upon a separate hub of its own.

Two-stroke model of a newcomer among Coventry makes—the Mars

A Wolverhampton production—the H.B.

A Sheffield-Henderson outfit possessing a thoroughly sporting appearance.

That exceptionally large mudguards do not always detract from appearance is evidenced in the 8 h.p. Vindec-Jap sidecar.

LITTON SLACK CLIMBED FIFTY TIMES.

A Successful Attack on a so-called "Impossible" Hill.

LITTON Slack, a mere track over the hills near the head of Miller's Dale, in Derbyshire, is one of those tantalising climbs which presents continual difficulty to motor cyclists.

Comparatively few non-stop ascents have been made, and its inclusion in the Six Days Trial of 1914 proved an entire *fiasco*. Recently in a well-supported trial only one solo and one sidecar out of a large entry reached the summit.

The gradients throughout the length of the hill (approximately half a mile) are severe, but it is doubtful if either on the first steep pitch at the foot or the last rise at the summit they approach the 1 in "5 point something" claimed for them. Drought had brought the hill into its most climbable condition, the chief difficulties to contend with being the loose and shifting surfaces near the bottom and again at the summit. For those not familiar with the hill an indication of its severity may be given when we say that our representative's $4\frac{1}{2}$ h.p. single-cylinder sidecar (with passenger normally seated) failed entirely through wheel slip.

This attempt was made on Thursday last, our presence being due to the fact that Mr. L. B. Henderson, the maker of the Sheffield-Henderson machines, was intent on that day to test one of his productions—the new sports model—in rather an unusual way.

At the summit of Litton Slack, Miller's Dale, Derbyshire, which was climbed fifty times last Thursday, by F. W. James on a 4 h.p. Sports Sheffield-Henderson.

The proposed test was to make fifty ascents, these, with the corresponding descents by way of the winding and less direct "slip road," to be done as far as possible without stopping. The machine was standard pattern with 4 h.p. Blackburne engine, having a lightened piston, flywheel, and connecting rod. New Clincher tyres were fitted, and the carburettor was an Amac. Rumbaken magneto, Sturmey-Archer gear box (gears

$5\frac{1}{2}$, 8 $\frac{1}{2}$, and 14 to 1), Brampton chains, and Enfield cush hub were also in conformity with the usual specification. A Sphinx sparking plug with air-cooled central electrode was employed.

At 12.5 p.m. the machine started on its first circuit, being ridden by F. W. James, son of the well-known Sheffield agent, who handles this make. The circuit was approximately one and a quarter miles in length, and involved serious braking tests as well as the demands upon the power of the engine; for the "slip road" has two bad hairpins, one absolutely overhanging the valley below.

A Good Performance.

Twenty-five climbs were completed without stopping, when the rider decided to take some refreshments at two o'clock; thus the average speed was approximately 16 m.p.h.

A restart was made at 2.33 p.m., but the engine stopped firing owing to an oiled plug at the end of the first descent. In order to prevent any unobserved adjustments, the rider carried no spares or tools, and a mechanic had to run with the necessary renewal to the bottom; at the end of the next descent the same thing happened again. Probably the trouble was caused by the drip feed being left open during the refreshment stop.

Thereafter the machine ran perfectly until the fiftieth circuit was completed at 4.21 p.m., the average speed over the second period being 17 $\frac{1}{2}$ m.p.h.

At the finish the machine was in perfect condition so far as engine, brakes, transmission, and cycle parts were concerned; the tread of the back tyre, however, was much worn by the loose stones.

Altogether, the test provided the manufacturer with much useful data as to the capabilities of the new model and the success of various modifications which had been made to the engine.

The descent of the slip road was purposely chosen as a test of braking power. The Sheffield-Henderson is seen rounding the hairpin at the top, while over the valley the ascent of the top half of Litton Slack is clearly shown.

Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

LOOK TO YOUR LICENCES.

Sir,—I noticed in your issue of some two or three weeks ago, a case where two motorists had been fined, their numbers, etc., on the licences having faded by the sun. I have just recently filled in the numbers and letters on my own licences, as they had also faded. Why do not the authorities use parchment ink when writing these, or Indian ink? This ink lasts for some years, through wet as well, and would also stand the sun.

DOUGLAS.

Rugby.

PETTY POLICE PERSECUTION.

Sir,—I read with interest about the Manchester reader who was stopped on the Wilmslow Road, Cheshire, for having one shoe missing on his front brake. I was stopped in Haslingden for the same thing about eight weeks ago, and although the shoe was on four miles previously, and the brake in order, I was fined £1, including costs, the Chairman of the bench remarking that they had let me off lightly owing to my youth, and that they hoped it would be a warning.

JUSTICE.

Waterfoot.

DRY BATTERIES.

Sir,—It occurs to me that my experience with a dry battery lighting set might be of interest to others who may contemplate the use of this system.

Early this year I purchased a small three-volt dry battery and leather case from Siemens without the rear lamp, as I already had this fitted to my machine, and, in addition to the rear lamp, I also connected it to a similar bulb in the acetylene head lamp for town use only. This arrangement was so convenient and satisfactory that it encouraged me to use the battery in the London-Land's End trial for lighting the rear lamp and also an inspection lamp on the handle-bars.

Since then I have used the same battery for the London-Edinburgh, and, in spite of frequent use between the two events, it carried me through successfully. On the return journey the rear light failed for two hours, and on investigating I discovered that the wire to the rear lamp was chafed through and making contact with the frame, to which the earth wire from the battery was also connected.

I feel convinced that for the whole two hours the battery was shorted, and yet it gave a fair light after this ill-use.

I must confess that I am amazed at the results, and congratulate myself on the amount saved by not using the acetylene head lamp for town riding, apart from the trouble of recharging the generator. I have no connection with the makers of the batteries, but consider it only fair to mention their name.

JAMES A. HOULT.

FROM THE MECHANICAL ENGINEER'S POINT OF VIEW.

Sir,—As a constant reader of your most interesting paper, may I crave illumination from such undoubted experts as "Draughtsman" and the Pelican Engineering Co. on the advantages of journal over cup and cone bearings in the hubs of motor cycles? Does the cup and cone type give much trouble? If so, how, and how often? It seems to me as the conventional type stands up to the T.T., and Brooklands racing, one may say that the motor cycle industry runs on cup and cone bearings (and very smoothly at that). Unless these experts can show that journal bearings are cheaper and give less frictional resistance, why change them?

"Draughtsman" is of opinion that motor cycle designers have not sufficient ability to design journal bearings. Doubtless, such firms as A.J.S., Sunbeam, Indian, Norton, Triumph, and Scott will vie with each other to obtain the services of someone who has that ability.

I quite agree with "Draughtsman" that, having seen one or two lightweights, one has seen all; but what other alternatives have the designers? One can hardly expect a seventy-guinea lightweight to have such startling and alarming features as crank and connecting rod transmission. If "Draughtsman" believes that cars are exempt from transmission troubles, let him stay in the neighbourhood of notable hill districts in Great Britain. It is not uncommon for crown wheels and bevel gears in the transmission to strip their teeth, and for propeller-shafts or half-axes to shear, although, happily, these troubles grow fewer each year.

G.M.R.
Dalnair.

THE MOTOR CYCLE IN THE THEATRE.

Motor cycles have an established role on the stage; they are invariably used by heroes and heroines when a thrilling "get away" has to be made. Here is a scene from the London success, "Out to Win," now appearing at the Shaftesbury Theatre.

1 REAL FAMILY SIDECAR

Sir,—The enclosed photograph shows one way of reaching the seaside in comfort, with a family (and luggage). Although the sidecar is heavy, whatever side drag exists it is not transmitted to the handle-bars. It steers beautifully. I have had no experience with it so far on greasy tram lines, but I find no difficulty in winding country lanes, muddy or otherwise. You will notice the sidecar brake; this is connected with the brake on the driving wheel. Mr. Bischoff is quite right about the "pull to the left" feeling for the first few rides.

The sidecar is well sprung and rides very comfortably. The three children's seats in front are removable, and another adult seat may be used instead.

H. WOOLARD.

AN ULTRA-NARROW SIDE CAR.

Sir,—Referring to "A.C.C.'s" letter enquiring for a sidecar outfit that will pass through a passage 53in. wide, I may say that I have recently had a sidecar fitted to my $3\frac{1}{2}$ h.p. Rudge, and the outfit measures only 48in. overall width. The sidecar is one of a new design recently brought out by Henry Leslie, Ltd., Clifton Road, South Norwood, and, in addition to being strong, simple, and light, can be bought for £15 10s. complete. The name of the sidecar is the "Tritube."

L. J. MOORE.

ENGINES ACROSS THE FRAME.

Sir,—On several occasions recently I have seen mentioned in *The Motor Cycle* (which is fully appreciated here in Italy) the arrangement of a V twin engine transversely in a frame of duplex variety. In view of the several advantages in the direction of cooling, compactness, and neatness of an engine and gear box unit, besides the possibility of adopting overhead valves, it would be interesting to know whether such designs have any great disadvantages.

I am wondering whether the imperfect balance presented by the V engine, the influence of torque and vibration is to be feared in the lateral balance of the machine, which in some

The difficulty of accommodating a family of six in a sidecar has been overcome by our correspondent, H. Woolard, by means of a special Acme outfit, adapted from the taxi sidecar made by the Coventry Acme Co

way may influence the steering. Such a fault does not exist in the flat twin A.B.C. and is inappreciable in the little single F.N., but cannot the torque in a big single or B twin engine be felt?

Bologna, Italy.

ABROAD.

MOTORING IN SWITZERLAND.

Sir,—I was pleased to read the letter in your last issue from Dr. Paul Lang to the effect that Federal control of the police in Switzerland is likely to succeed the present Cantonal control. The proof of the pudding is in the eating, however, and it remains to be seen whether *motor vehicles*, as apart from their drivers and passengers, will be any more welcome in Switzerland under the new authority.

The first forms the required proofs should take are: (1) That policemen should cease to draw a percentage of fines inflicted in cases brought by them; and (2) that the power to demand money from a motorist should be taken from all policemen.

J. STUART WHITE.

AT THE BIG A.C.U. EVENTS.

At Brooklands, in the Isle of Man, at every venue where motor cyclists foregather for a big event, cameras of all sorts and sizes are greatly in evidence. In addition to the expert press photographers, there are small boys with little Brownies attempting the impossible with last moving-riders as their object; there are ladies who "snap" their friends and their friends' friends, and there are other keen amateurs who set out to collect "snaps" with definite objectives. These impressions have been selected from the Isle of Man films of Capt. N O Vinter of the Scott Co., who collected "Smiles," which reveal the spirit of motor cycledom at the T.T. races, and are typical of motor cyclists generally, for a more genial fraternity does not exist

- (1) A. Sapey, of the Lucas Electrical Co., Ltd.
- (2) A popular Amac representative—"the genial Mr. Clibbery."
- (3) A well-known A.C.U. judge, Dr. A. M. Low
- (4) R. R. Coes, from the U.S.A., stable manager of the Indian wigwam
- (5) A. V. Ebbelwhite, an official timekeeper and the friend of every man who attempts records at Brooklands.
- (6) Prominent in Yorkshire I. Norman Longfield
- (7) Norman Black, the Omega rider, who smiled all round the T.T. course
- (8) R. W. Stansfield a Scott speed man

THE CYCLE CAR OF MODERATE PRICE.

Sir,—I was much interested in the article by "Ubique" under the above heading, and if a go-ahead manufacturer could be induced to venture on its production—and other firms would soon follow—the wants of a large section of the motoring public would be catered for. From evidences on the road, a considerable number of sidecar owners take a passenger on the pillion, and often an extra child in the sidecar, and it is for this class that "Ubique's" design would, I think, immediately appeal.

With regard to a suitable power unit, I am of the opinion that an 8 h.p. twin engine would prove better than a 600 c.c. single; also a three-speed gear box instead of two speeds. Neither of these could be considered as unnecessary "frills," especially as we all do not live in level counties, and also that the proposed cycle car would have to do the same serious work as is now done by high-class sidecar outfits.

As to price, it would seem that as some well-known sidecars with an 8 h.p. engine and three-speed gear box can be purchased for about £160, "Ubique's" cycle car should not, with a large output, cost much more, and tours could be undertaken in practically all parts of the country in far more comfort and cleanliness than with a sidecar.

I am aware that there is an enormous number of single-cylinder sidecars doing all that is asked of them, but after ten years' experience of all types I am driven to the conclusion that for a hilly country especially, and for serious touring, an 8 h.p. engine and three-speed gear box are a *sine qua non* for the transportation of more than one passenger and a moderate quantity of luggage.

It must not be forgotten, of course, that this four-wheeled cycle car would cost a few pounds per annum more in tax, insurance, etc., which I should think, however, would prove no detriment, in view of the increased comfort and cleanliness for the driver and pillion passenger in their new positions.

DUMPLING.

Tavistock.

RIDING CONDITIONS IN IRELAND.

Sir,—In a run of about fifty miles (inside a twenty mile radius), I met the following "attractions" (?) to our already none too wonderful roads.

Fifteen trenches dug across the road and two felled trees. Nine of the trenches had been filled in, but still capable of giving one a considerable jar. Three others semi-filled about nine to twelve inches deep. Three open trenches were three feet across, and from two to three feet deep. One of these had a Ford in it, in rather an unusual position, and some parts of that Ford were "slightly" bent. I might also mention that I have been "held up" four times in one evening.

T.C.D.

Dublin.

Sir,—As you no doubt know, motoring in parts of Ireland is a very risky undertaking just now. It is quite common to come on stone walls built across the road, trees felled to block all traffic, and trenches cut, to impede military operations.

A few days ago I was running nicely along with my wife in my Sunbeam sidecar and another lady on the Tan-Sad, when we saw a little roughness on the road in front of us. It proved to be a trench, with a little line of stones placed so as to hide the hole from anyone coming up the hill. This I avoided by a foot, and swung round a corner into another road. A mile further on a large tree lay in the way, and by breaking a few boughs and twigs I was able to make a way through. In a beautiful place called the Scalp, near Enniskerry, I ran round a corner slowly, and, before we could realise what had happened, I ran into a trench 2ft. 6in. deep by 18in. wide. My memory of exactly what happened is rather confused. There was a terrific crash, and I felt sure the machine was wrecked, but after hunting

JUST WHAT A LARGE
NUMBER OF OUR LADY
READERS REQUIRE.

Miss Bradley, daughter of *The Motor Cycle* Continental correspondent, in the smart little cycle car, which engined with a 7-9 Harley-Davidson engine, has been found capable of 60 m.p.h.

over for the damage I found the stand of the back wheel had slipped from its catch. The silencer, however, was crumpled up, but not even a spoke was bent. The wheels ran true, the springs of the sidecar were intact—in a word, the Sunbeam was practically not a whit the worse for its adventure.

I consider this very remarkable. I had a passenger load of about twenty-seven stone, and a heavy box and other luggage, and to be able to say my machine was none the worse is a very wonderful thing. It shows the excellent stuff there must be in the Sunbeam.

EDGAR F. KEATINGE.

SIDECAR BRAKES.

Sir,—Your contributor, Mr. P. W. Bischoff, is perfectly correct in his assumption that the "swing to the right," when a sidecar outfit is braked on the rear wheel only, does actually take place. This is accentuated to a great degree when a side-by-side two-seated car is fitted, as in the case of our motor cycle taxi. It was the knowledge of this fact that caused us to design our special Bowden-operated, compensated rear wheel and sidecar wheel brake before we marketed this vehicle.

In our system, upon which patents are pending, the compensation is obtained by passing the cable over a pulley between two stops, the pulley being drawn forward by the action of the foot lever.

We have found in practice, however, that it is not necessary to give a definite advantage in leverage to the rear wheel as, owing to the much greater length of the cable to the sidecar wheel brake, a proportion of the force applied is absorbed by the compression of the outer Bowden casing, with the result that the brake action is sufficiently reduced.

As our outfit is fitted with the usual internal expanding brake to the rear wheel of the B.S.A. twin in addition to the compensated brake which operates on the brake drums attached to the rims of the rear and sidecar wheels, it is possible for us clearly to demonstrate that the theory is correct.

It is found, when descending a steep hill, particularly if one takes to the wrong side of the road, that if the standard brake be operated on the rear wheel only, with a full load in the sidecar, i.e., two passengers, the "pull to the right" is very marked indeed. If this brake be released and our compensated brake then operated, this "pull to the right" is immediately corrected and a straight course is steered without effort. Also, the retarding effect of this brake upon the two wheels will pull up the outfit in the same distance with equal effort, as the single wheel brake, and without skidding the wheels. With extra pressure the wheels can be skidded and the outfit pulled up in half the distance. With the road smooth and greasy, experiments show that if the rear wheel brake alone were applied the outfit would skid obliquely down the hill.

These facts we have demonstrated to many police authorities up and down the country in the course of our motor cycle taxi crusade, and they have unanimously expressed their unqualified approval of this system of braking.

If Mr. Bischoff is at any time in Birmingham it would give us great pleasure to take him to the local test hill in our demonstration motor cycle taxi and prove his theories to his satisfaction.

THE COUNTY CYCLE AND MOTOR CO.
Birmingham.

DAMAGE TO ROADS.

Sir,—I would like to say a few words to Messrs. Barnett who passed such a great deal of time away "thinking" about the traction engine before they wrote. I sincerely trust they were not the pair in charge of the engine in question, or their "vast experience" in driving it comes to nothing. I attempted to pass this machine on the road, but had travelled some distance before I could make the person in charge realise that he had not bought the road. The damage extends as far as Trentham, and between Stone and Trentham on three different stretches of road there were

THE OUTDOOR LIFE.

In these days of expensive hotels, a motor cycle camping caravan, which can be fitted to a motor cycle and sidecar, cannot fail to interest those who enjoy the pleasures of the open road. The motor cycle type of Eccles trailer depicted weighs but 2 cwt., and is constructed of weatherproof Cape cart hood material, and costs £67 10s. It can be comfortably drawn by a 3½ h.p. sidecar. The Eccles trailer is marketed by W. H. Bailey 85 Great Portland Street London N 1

in all eleven men working for three days after the traction engine had passed; with all their experience they may possibly tell us how far the tax paid went in paying for repairs. Also at Trentham I saw two solo riders thrown by the rut caused through that machine. In one instance there was a lady riding on the carrier. If your correspondents require any more information the A.A. patrol at Trentham could, perhaps, furnish them with it.

AN "INEXPERIENCED" DRIVER.**CHAIN DIFFICULTIES**

Sir,—Referring to your correspondent Mr. Henry Evans's remarks on the question of standard chains, may I be allowed, through your columns, to state the following experience.

* During the third week in April I ordered through a local garage some spare half links for my Enfield gear chains from the chain manufacturer. At the end of a week a reply was received stating that two different types of the particular size of chain were made differing by 100 in. in a certain dimension. My chain was accordingly accurately measured by micrometer and the exact dimensions forwarded. No reply having been received after a fortnight a second application was made (over a week ago). Three days ago an advice note was received referring to the despatch of the links, but up to the time of writing they have not been received.

I cannot believe that a delay of over a month is in the least necessary at the present time, when factories are almost without exception working short time, owing to the universal slump, to say nothing of the coal strike. I would add that the spares were unobtainable in the town, although of an exceedingly common size.

D.J.C.

Northampton.

BRAKES ON SIDECARS

Sir,—I have had a sidecar brake fitted on my Matchless combination. A compensator is fixed between the rear brake lever and the sidecar brake lever. The control rod is fixed just a little towards the rear wheel brake, on the compensator, there being more need of a better leverage on the rear wheel than the sidecar wheel on account of the extra weight of the bicycle. The brake and parts are so constructed as to allow the wheel to be changed in about seven minutes. I have experienced no bad effect on the steering, both brakes going on together and, owing to the compensa-

tor, both getting an even pressure according to weight. I am able to pull up in a very short distance at speeds from thirty to forty miles an hour without the sign of a skid. The cost comes out at £7. If any of your readers are interested I am willing to forward the address of the mechanic who carried out the work.

C. MAPLE.

MOUNTS FOR DISABLED RIDERS.

Sir,—With reference to the letter in the issue of June 23rd from J. Murray, I lost my right arm (at elbow) some two years ago, and have lately been looking for a solo machine that would not require a lot of alteration for me to be able to drive. Most machines seem to have controls on both sides of the handle-bars, some of which would have to be altered for foot control. I fail to see how a gear change can be worked, unless a special appliance is used in place of an artificial hand. I should be glad of some advice on this matter.

D. R. TOLLER.

[It should not be a difficult matter to convert most gear change mechanism to foot control. Several T.T. riders used foot control on Sturmeys and Moss 'gears.—Ed.]

SUMMARY OF CORRESPONDENCE.

Referring to recent notes by "Ixion," on the family sidecar, Mr. J. P. Sowerby suggests that an old A.C. Sociable may easily be converted to render it suitable for quite a large family.

"Powerplus" complains of the "road hogging" of fast cars. He asserts that certain owners of cars appear to delight in steering dangerously close to a motor cyclist they overtake.

Capt. the Hon. Eyre Massey writes in appreciation of the treatment received at the hands of the makers of the Donett motor cycle, and also of Messrs. Frank Whitworth, Ltd., their Birmingham agents.

Mr. F. G. Bailey, 72, Malvern Road, Gillingham, Kent, asks if any reader knows of a good second-hand motor-propelled invalid chair for sale.

Obtainable by post (remittance with order) from **ILLIFFE & SONS Ltd.** 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

FINISH OF ENAMELLED FRAMES.

(1.) Is the enamel on a motor cycle varnished over after being stoved to give it a glossy appearance? (2.) If so, what varnish is used, and where can it be obtained?—R.E.

(1 and 2.) The enamel is not varnished after being stoved, as the finishing coats have a high gloss without further treatment.

RESPONSIBILITY FOR ACCIDENT.

I was riding a motor cycle along the main road and had a bad smash by running into a motor car, which was reversing. On my left-hand side was a small lane, not used by motors, etc. The driver of the car tried to turn at this spot, with the front of his car on the hill. He must have heard me coming, because he stopped as if for me to pass. When close on him his car came across the road. I ran into him because there was no room to pass. (1.) Was that driver allowed to turn on the by-lane? (2.) He has offered to pay some little towards expenses. Should I accept?—C.H.

(1.) It was quite permissible for the driver of the car to attempt to turn in the road; but he should have assured himself that the road was clear. (2.) As he offered to pay something towards the expenses of your repairs, he evidently admits responsibility, and your best course is to submit a reasonable account to him.

GEAR RATIOS AND SPROCKET SIZES.

Having a 5 h.p. V twin machine of my own building, I intend fitting a Sturmey-Archer gear box (chain-cum-belt drive) and should like to know the size of engine sprocket I shall need. There is a 14in. diameter belt rim on hand of which I should like to make use. Please enlighten me on the following: (1.) What number of teeth on engine sprocket shall I require, using 14in. diameter belt rim, to get a 5 to 1 top gear? (2.) What is the pitch and width of chain suitable for the Sturmey-Archer gear box?—P.P.

(1.) If you use a 14in. diameter belt rim on the back wheel, it is almost impossible to get a gear as low as 5 to 1, as it is inadvisable to use a sprocket with a smaller number of teeth than 12, and even this size is smaller than that recommended by the chain makers. With the

present sizes of belt pulleys and 30 T. clutch sprocket, it would be necessary to use an engine-shaft sprocket of 10 T. to obtain a 5 to 1 top gear ratio. (2.) The Sturmey-Archer three-speed gear box is intended to take $\frac{3}{8} \times \frac{3}{16}$ in. chain.

ADJUSTING HUB GEAR.

The Sturmey-Archer three-speed hub in my 1914 Triumph will not give second gear. I get bottom and top, also free engine, and can get second for a few revolutions. Then it appears to slip out down to low. I have tried adjusting it in all positions. All the pinions are in good order. Can you tell me what to do, as nothing appears to be worn at all?—W.H.

If the pinions and other internal parts of the hub gear are in as good condition as you state, there is no reason why you should not get all three gears, provided the control is correctly adjusted. Place the control lever in the low gear position, and completely slacken off the adjustment of the rod; the low gear should now be fully engaged. Gradually increase the tension of the gear rod adjustment until

it is just taut, then move the lever towards the second gear position. About midway between the two gears, it should be possible to revolve the back wheel independently of the belt drum without any grating sound from the pinions; use the adjuster until this position is found. There should be a neutral adjusting position on the control quadrant, also between second and top gears.

REMOVING J.A.P. TIMING WHEEL.

How is the timing wheel on the engine-shaft of an 8 h.p. o.h.v. J.A.P. air-cooled engine removed? Is it screwed on, and, if so, is it right or left-hand thread?—W.O.F.

The timing wheel is screwed on to the mainshaft with a left-hand thread.

VIBRATION.

When running my 2½ h.p. two-stroke on the stand at a little over a quarter throttle, a side-to-side vibration makes itself evident. By that I mean that the whole engine bodily sways from side to side. This, however, ceases at half-throttle and over. This condition of affairs is also evident on the road, although not so markedly, both when running light and also when running fast up a gradient. (1.) Do you consider that the above vibration is caused by the balance weights being unequal? (2.) Is it possible to find out which is the heavier of the two with a view to rectification? The crankshaft is made in one piece, and, owing to the complicated shape of the bob-weights, it is practically impossible to measure them with a view to finding their volume and so checking them that way. (3.) Can you recommend a satisfactory jointing medium for making an oil-tight crank case?—W.G.W.

(1 and 2.) It is most unlikely that the vibration which you mention is caused by the balance weights being unequal, although without actual inspection it is difficult to diagnose the trouble. Presumably, you have made quite sure that the engine bolts are a good fit, and that the crank case is well secured in the frame, also that the main bearings are in good condition and that the flywheel and crankshaft are both running truly. (3.) If the faces of the crank case and cylinder are in good condition, a packing made of strong brown paper smeared on both sides with seccotine should answer well.

Important Dates.

- Sat., July 16th—Ilkley M.C. and L.C.C. Open Reliability Trial.
- Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials
- Sun., July 24th—Motor Cycle Grand Prix Race in France.
- Sat., July 30th—Newcastle and District M.C. Open Speed Trials.
- Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.
- Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.
- Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.
- Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.
- Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.
- Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.
- Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.
- Mon., Aug. 29th, to Sat., Sept 3rd A.C.U. Six Days Trial.
- Sat., Sept. 17th—Grand Prix Race for Cycle Cars.
- Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.
- Mon., Nov. 28th, to Sat., Dec 3rd—The Olympia Motor Cycle Show.

A Low Priced Monocar.

The price of the A.V. monocar is now one hundred guineas, complete with wind-screen and mechanical horn; inadvertently we mentioned the figure as £100 in a recent issue.

Flywheel Spanners.

A special spanner for locking up the flywheels and driving centre of Villiers engines is being marketed by the Villiers Engineering Co., Ltd., Blakenhall, Wolverhampton. The average motor cycle spanner is too small for this purpose, and the special spanner is of a very robust character, and is sold for 3s. 6d. Incidentally, it may be used as a plug spanner.

Transport to the Grand Prix.

A scheme for the transport of competing British machines to France for the Grand Prix at Le Mans on July 24th is being organised by the Hutchinson Tyre Co., 70, Basinghall Street, London, E.C.2. Briefly, the company will transport any competing machine without worry to the riders, provided that it is delivered to them securely crated. They also suggest that if all British manufacturers and riders could arrange to cross on the same day, the Hutchinson interpreter would be placed at the disposal of the party.

British Tyre Trade.

A booklet published by the British Rubber Tyre Manufacturers' Association describes the position of the rubber tyre industry in Great Britain. It is pointed out how the British tyre trade is placed in a difficult position owing to the cheaper labour rates on the Continent and the fact that foreign tyres are still allowed to be imported into this country free of duty. As regards tyre imports, the greatest number (12,045) come from Belgium, while 10,027 covers have been received from the United States. The largest number of inner tubes was received from France (325,151), America coming second with 289,037.

The Powell motor cycle, described some months ago in *The Motor Cycle*, is now in production, and, as will be seen from the illustration, is a particularly smart-looking machine.

American Machines in South Africa.

In a recent Port Elizabeth M.C.C. flexibility hill-climb, 7.0 h.p. Indians were first, second, and third in the unlimited solo class; while in the unlimited sidcar class the same makes gained the first five places.

A Successful North-country Rider.

Hugh Gibson, who recently gained the N.W. Centre (A.C.U.) Deansgate Challenge Cup probably has a longer list of successes in reliability trials than any other rider in the country. He still holds the John-o'-Groat's to Land's End and the Irish End-to-End sidcar records, and has innumerable meritorious performances in English and Scottish Six Days Trials to his credit. A native of Lancashire, it is fitting that he should be responsible for the competition work of the Royal Ruby machines.

Some T.T. Echoes.

R. E. Pugh, who rode a Levis, was reported to have had trouble with his magneto spindle. This idea no doubt arose from the fact that when questioned by an official he said the defect was the "back spindle," which was misunderstood for "mag. spindle." His E.I.C. magneto functioned perfectly throughout.

In addition to the amounts already mentioned in connection with Mr. A. Ross's I.O.M. Hospital Fund, the sum of £4 1s. 8d.; being proceeds of the A.C.U. "Tea-Tea" Gazette, has to be acknowledged.

The fastest lap in the 250 c.c. class of the Junior Race, which was accom-

The engine in some respects resembles the Blackburne. The rider is J. A. Watson-Bourne, who incidentally owns a stud of nine machines of different makes.

plished by B. Kershaw (2½ New Imperial), was no doubt facilitated by the Cox-Atmos carburetter.

The following statistics regarding the use of gear boxes in the T.T. races have been compiled: In the Junior Race twenty-three motor cycles were fitted with Sturmey-Archer gears, nineteen with other proprietary makes, and the remaining twenty-four were fitted with gears made by the manufacturers of the machines. In the Senior race twenty used Sturmey-Archer gears, one of another make, and forty-seven with gears made by the manufacturers themselves. During the actual races no machine equipped with the Sturmey box had gear trouble.

H. R. Harveyson, the unlucky member of the Indian team, told us that his troubles were entirely due to inner tubes. On the second lap the seam in the tube failed him at Bray Hill, and on the third lap the butt-ended tube caused similar trouble.

Ball bearings made by the Skefko Ball Bearing Co., Ltd., Luton, were fitted to the triumphant A.J.S. machines in the T.T. races.

The T.T. was a decided success for Renold chains. Out of thirty gold medal winners twenty-nine used this make. The winners of all classes but the 750 c.c. in the 500 miles race also used them.

An American Four-cylinder.

The manufacturers of the Ace four-cylinder, which was introduced into this country last year, have now entirely got over the financial difficulties they have been experiencing, and are now working on full time.

Review.

"The Handy Boy's Book" (Ward, Lock, and Co., Warwick House, Salisbury Square, London, E.C.4, 6s.): A book which will certainly delight the heart of the younger readers of *The Motor Cycle*. It teaches the youngster how to use his hands, first, by simple work, such as carpentry, then by more advanced work, such as wood-turning, till it comes to the question of motor cycles, to which a particular chapter is devoted. The clear illustrations showing the four-cycle principle are taken from "Motor Cycles and How to Manage Them." There are also a few notes concerning photography, the making of tents, and camping.

Catalogues Received.

Ward and Avey, Ltd., Somerset Road, Teddington, Middlesex: Folder describing the 5, 6, and 8 h.p. models of the 100 guinea A.V. monocar.

Ferodo, Ltd., Sovereign Mills, Chapel-en-le-Frith: A loose leaf price list dealing with the well-known Ferodo friction materials.

Amac, Ltd., Aston Cross, Birmingham: A list detailing the successes of machines in the T.T. races equipped with Amac carburetters. These carburetters were fitted to the first three of the Junior, and first, third, and fourth in the Senior, Races.

Douglas Motors, Ltd., Kingswood, Bristol: Spare parts list of the 2½ h.p. Douglas models and a folder giving the specification of the "completely equipped" models.

SPEED TRIALS AT WESTCLIFF.

Inter-club Mid-week Event supported by Large Entry. Duel between Motor Cycle and Car.

THE Western Esplanade at Westcliff is a long and sticky stretch of Tarmac, which is relieved at one point by a slight left-hand bend, but it provided an excellent course for the open speed trials organised conjointly by the Essex M.C. and the Essex County and Southend A.C., held last Thursday.

An entry list, including numbers of well-known riders and machines, aided by the rapid and unceasing sequence of events, held the interest of the many hundreds of spectators lining the route from the first to the last event, motor cycle and car classes being run alternately.

Some very fast times were made; but, since there were no fewer than thirty-four motor cycle events, a record of each cannot be attempted. Throughout the event there were no untoward incidents, and the organisation was most efficient.

Unfortunately, what is usually the most exciting race of the day—a duel between the fastest car and the fastest motor cycle—was somewhat disappointing. H. Le Vack was pitched against J. F. Duff on a 200 h.p. Fiat. The Fiat raced home many yards ahead of the Indian. The following are the place winners on time. Formula results are referred to on page 62.

Results on Time.

250 c.c. CLASSES.

ANY TYPE.—Flying start: 1, H. Newey (2½ Lewis), 42s.; 2, J. V. Prestwich (2½ Diamond-Jap), 42s.; 3, A. A. Swan (2½ New Imperial), 44s. Standing start: 1, J. V. Prestwich (2½ Diamond-Jap), 47s.; 2, B. Kershaw (2½ New Imperial), 50s.; 3, H. Newey (2½ Lewis), 50s.

STANDARD TOURING.—Flying start: 1, G. M. Greening (2½ Francis-Barnett), 44s.; 2, J. V. Prestwich (2½ Massey-Arran-Jap), 46s.; 3, J. Lidstone (2½ James), 47s. Standing start: 1, H. Newey (2½ Lewis), 47s.; 2, G. M. Greening (2½ Francis-Barnett), 50s.; 3, J. V. Prestwich (2½ Massey-Arran-Jap), 53s.

A duel between a single and a twin. H. Le Vack on his 7-9 h.p. Indian and Harold Petty (3½ Norton) riding almost "neck and neck" in the Southend Speed Trial.

350 c.c. CLASSES.

ANY TYPE.—Flying start: 1, J. V. Prestwich (2½ Diamond-Jap), 41s.; 2, A. A. Prestwich (2½ Dot-Jap), 42s.; 3, A. A. Swan (2½ New Imperial), 44s. Standing start: 1, J. V. Prestwich (2½ Dot-Jap), 48s.; 2, B. Kershaw (2½ New Imperial), 49s.; 3, A. A. Prestwich (2½ Diamond-Jap), 51s.

STANDARD TOURING.—Flying start: 1, A. A. Prestwich (2½ Dot-Jap), 39s.; 2, J. V. Prestwich (2½ Massey-Arran-Jap), 48s.; 3, H. F. Edwards (2½ Coulson-Jap), 48s. Standing start: 1, H. F. Edwards (2½ Coulson-Jap), 52s.; 2, J. V. Prestwich (2½ Massey-Arran-Jap), 55s.

500 c.c. CLASSES.

ANY TYPE.—Flying start: 1, H. Petty (3½ Norton), 31s.; 2, G. A. Vandervell (3½ Norton), 54s.; 3, B. S. Allen (3½ Norton), 55s. Standing start: 1, H. Petty (3½ Norton), 38s.; 2, B. S. Allen (3½ Norton), 42s.; 3, J. V. Prestwich (2½ Diamond-Jap), 48s.

STANDARD TOURING.—Flying start: 1, G. Strange (3½ James), 37s.; 2, H. Le Vack (3½ Indian), 38s.; 3, J. Day (3½ Norton), 40s. Standing start: 1, E. A. Marshall (3 A.B.C.), 43s.; 2, G. Strange (3½ James), 45s.; 3, J. Day (3½ Norton), 46s.

600 c.c. CLASSES.

SIDECARS (ANY TYPE).—Flying start: 1, B. S. Allen (3½ Norton sc.), 46s. Standing start: 1, B. S. Allen (3½ Norton), 52s.

750 c.c. CLASSES.

ANY TYPE.—Flying start: 1, G. A. Vandervell (3½ Norton), 37s.; 2, H. Petty (3½ Norton), 38s.; 3, J. V. Prestwich (2½ Dot-Jap), 42s. Standing start: 1, H. Petty (3½ Norton), 37s.; 2, G. A. Vandervell (3½ Norton), 39s.; 3, J. V. Prestwich (2½ Diamond-Jap), 47s.

STANDARD TOURING.—Flying start: 1, J. Day (3½ Norton), 39s.; 2, G. Strange (3½ James), 39s.; 3, D. Crawford (5 Zenith), 45s. Standing start: 1, G. Strange (3½ James), 43s.; 2, A. A. Prestwich (2½ Dot-Jap), 43s.; 3, J. V. Prestwich (2½ Massey-Arran-Jap), 56s.

STANDARD TOURING SIDECARS.—Flying start: 1, D. Crawford (5 Zenith), 54s. Standing start: 1, G. E. Stobart (5-6 James), 50s.; 2, D. Crawford (5 Zenith), 1m.-2s.

ANY SIDECAR.—Standing start: 1, D. Crawford (5 Zenith), 1m. 8s.

THE UNLIMITED CLASSES.

ANY TYPE.—Flying start: 1, H. Le Vack (7 Indian), 29s.; 2, H. Petty (3½ Norton), 31s.; 3, G. A. Vandervell (3½ Norton), 33s. Standing start: 1, H. Le Vack (7 Indian), 39s.; 2, H. Petty (3½ Norton), 40s.; 3, D. H. Davidson (7-9 Harley-Davidson), 42s.

STANDARD TOURING.—Flying start: 1, G. Strange (3½ James), 37s.; 2, A. A. Prestwich (2½ Dot-Jap), 43s.; 3, J. V. Prestwich (2½ Massey-Arran-Jap), 46s. Standing start: 1, L. McCordle (7-9 Harley-Davidson), 41s.; 2, G. Strange (3½ James), 44s.; 3, A. A. Prestwich (2½ Massey-Arran-Jap), 46s.

ANY SIDECAR.—Flying start: 1, H. Le Vack (7 Indian), 37s.; 2, D. H. Davidson (7-9 Harley-Davidson), 42s.; 3, F. C. Pead (7-9 Harley-Davidson), 47s. Standing start: 1, H. Le Vack (7 Indian), 43s.; 2, W. J. Barker (7-9 Zenith), 1m. 1s.

STANDARD TOURING SIDECARS.—Flying start: 1, G. E. Stobart (5-6 James) 38s.; 2, F. C. Pead (7-9 Harley-Davidson), 48s. Standing start: 1, W. Vasey (8 Henderson), 50s.; 2, F. C. Pead (7 Indian), 53s.; 3, W. J. Barker (7 Zenith), 56s.

CYCLE, CAR CLASSES.

TOURING THREE-WHEELERS.—Standing start: 1, E. B. Ware (8 Morgan-Jap), 52s.; 2, K. G. Cockerell (8 Morgan), 53s.

ANY THREE-WHEELERS.—Standing start: 1, E. B. Ware (8 Morgan-Jap), 54s.

ANY FOUR-WHEELED CYCLE CAR.—Standing start: 1, H. R. Godfrey (G.N.), 43s.; 2, G. L. Hawkins (G.N.), 45s.; 3, H. W. Martin (G.N.), 1m. 2s.

TOURING FOUR-WHEELED CYCLE CAR.—Standing start: 1, H. W. Martin (G.N.), 1m. 10s.; 2, E. H. Allott (Carden), 1m. 17s.

Showing the great public interest in the Speed Trials at Southend. G. G. Stobart, 5-6 h.p. James sidecar, finishing.

" 18th	...	9.37 "
" 20th	...	9.35 "

More Index Marks for Birmingham.

In addition to the index letters O, O.A., O.B., O.E., and O.H., reserved for Birmingham motorists, there is now O.K.

Motoring Visitors to France.

Having regard to the imminence of the Grand Prix race in France, and to the obvious necessity of getting all the money possible into that country for the purpose of strengthening her financial position, it seems most unfortunate (says *The Autocar*) that the French should have selected motor cars as articles of presumed luxury, to be taxed unmercifully on importation.

Australian Preferential Tariff.

According to Reuter's Trade Service, the House of Representatives in Australia has agreed to the following changes in the tariff:

Motor cycles, excluding sidecars.—British preferential, 20%; intermediate, 25%; general, 30%.

This new tariff represents a reduction from £10, £11, and £12, or 30%, 35%, and 40% *ad valorem* respectively to the foregoing exclusive *ad valorem* rates.

Colouring Petrol.

For many years the only means of indicating to a motorist the grade or quality of his petrol, apart from its performance, has been by the use of differently painted cans. So many distinctive colours of cans are now marketed that the position is somewhat bewildering, and with the advent of the roadside pump a ready means of identification of the various grades is of great benefit. We hear that a method of colouring petrol has now been perfected, and gives results which are of a most convincing nature. To know that Grade 1 petrol is blue and Grade 3 red, or any other combination of colours, and also to be assured that if water should by any chance be present in petrol it will not absorb any of the colour of the spirit but remain water-white, will remove many of the minor worries from the mind of the motorist. Mr. Knight, of the Air Ministry, Alexandra House, Kingsway, London, W.C.1, is responsible for the invention of this method of colouring.

Motor Cycling in Ceylon.

The Ceylon Motor Cycle Club has come to life again, and has some sixty members. The club intends to encourage the sporting side of motor cycling by organising hill-climbs, short reliability trials, speed competitions, etc. In due course the club will be affiliated to the A.C.U., with a view to obtaining for the members the usual privileges when they go home.

Arbuthnot Trial, 1922.

During the recent Arbuthnot Trophy Trial all the competitors and officials met to discuss next year's competition, and some valuable suggestions were made. As regards date, it was thought that Easter leave would best suit officers in ships and in barracks. It was also suggested that entries should not close till just before the event. Entries must be sent by postcard and paid for on arrival. This would be a great boon to officers who might not get leave till the last moment. Several competitors pointed out that the Navy possessed a number of two-stroke riders who were afraid to compete, and it was then learnt that these machines were known in the service as "Splutterers." Someone then suggested a "Splutterers' Cup." The meeting was finally found to be in favour of making the competition a team trial between teams from various units, and it was suggested that the Admiralty should be approached and asked to suggest which units might send entries. It was also suggested that the course might be easier, repairs might be allowed, but that there should be non-stop sections and a stricter time limit.

E. W. Parham with the short wheelbase Coventry-Victor, on which he competed in the 500 mile race at Brooklands. He was first in his class, having covered the 500 miles in 8h. 55m. 42s. at an average speed of 56 m.p.h.

A Rally in the Midlands.

The manufacturers of Easting wind-screens are holding a rally in the recreation grounds at Stratford-on-Avon on July 23rd. Prizes will be given in various events, and all motor cyclists are invited.

An 80 lb. Miniature.

America's latest motor cycle is a miniature on scooter lines embodying an open pressed steel frame, which is sprung, a vertical twin-cylinder engine, two-speed and clutch, and disc wheels. It weighs 80 lb., and sells at 150 dollars.

500 Miles in 25 Hours.

Recently A. O. Brett, of Scarborough, set out to do 500 miles in twenty-five hours in order to qualify for a medal offered by the York M.C., riding a 5-6 h.p. Coventry-Eagle sidecar. Starting from Scarborough at six o'clock one Friday evening, the rider went to Barnet, then returned via York to Great Smeaton, and returned to York, having covered 506 miles within the required time. Total weight of the outfit was 8 cwt. 1 qr., and consumption averaged 60 m.p.g.

Open Speed Trials at Clipstone.

After a lapse of about ten years Clipstone Drive, Mansfield, is again to be used for open speed trials, the event being the competition organized by the Loughborough and Mansfield Clubs for the East Midland Centre on July 23rd. Clipstone is probably the finest course in the country, and on the present occasion there is to be a standing and flying kilo for the various classes. The course allows of a very generous flying start with ample room for pull up. It was here last year that H. R. Davies, the T.T. winner, put up his pace of nearly 82 m.p.h. on a 2½ h.p. A.J.S. over the half mile in a closed event, and after a few days indisputably confirmed at Brooklands that the timing had been correct. Full particulars may be obtained from the Centre Secretary, Mr. K. S. Topping, 64, Frederick Street, Loughborough.

The SCOTTISH 6 Days TRIALS

127 Starters in this Week's Big Event organised by the Edinburgh M.C.

EDINBURGH, SUNDAY.

A RECORD entry and a record drought are the t.p. spots of the 1921 "Scottish." If the rain does not come speedily, the dust will baffle description, especially as thirty-five sidecar outfits, four runabouts, and fourteen light cars are sandwiched in amongst the eighty solo entries. But if thunder rain should come, it is liable to assume the form of a cloudburst in these violent latitudes, and floods may easily provide worse going than a loose, dry surface. Meanwhile the officials blandly describe the trial as "easy." They have organised it down to the last tack, and have already

suffers from officially observed wheelslip is entitled to lift his machine on to a harder patch of road (if he can find one) and score a clean ascent, provided he does not stop the engine. There are eight official hills, of which two—the Inverfari-gaig Corkscrew and Ballochandraine—are new. The Edinburgh sportsmen are working like niggers to put the wind up us about all the hills, but I believe that Amulree and Glendoe will still provide the real resistance. Amulree is the sort of hill that one can never be sure of, and Glendoe is full of real gradient.

The New Hill—Inverfari-gaig.

Ballochandraine—on Friday—is intended to weed out any engines which cannot hold their tune for a week. The Corkscrew is a test of driving. It includes—some say eight, some say fifteen—hairpins: anyhow, four of them occur almost simultaneously. The grade is not frightful, the edges of the road are smooth, and its centre is very rough. As all good motor cyclists know, hairpins should be taken on the outside. So the men will have to cross and recross the rough road centre very dexterously in order to tackle the successive Z turns in good style. Z to the nth power is the official description of this hill. Tornapress, of course, will always take its toll.

There are plenty of interesting entries. Most of the motor cyclists are yearning with an unholy joy to see the fourteen light cars perform on Tornapress; seven of these cars are air-cooled. Possibly the boot will be on the other leg—if it isn't, the road threatens to become well and truly blocked. Four Hawker baby two-strokes, with sump lubrication and fly-

wheel magnetos, are entered. H. G. Hawker could not get away to drive the sidecar, but T. Sopwith is handling one of the solo machines: the sidecar has a simple three-tube chassis, of which the main member was once a Dolphin under-carriage axle. "M. T. Calderon" is an anagram in pseudonyms, this rider's doctor having forbidden him to compete; nevertheless, he covered the 325 miles between his home and Edinburgh in one day.

A new single lever carburettor, the Wex, is fitted to three of the Hawker machines. A single jet with long narrow slit diffuser is employed.

A long pedal provides delicate clutch control on the Zenith (R. B. Clark's), a simple ratchet holding the clutch out when required.

Watson-Bourne is still suffering from the torn ear which resulted from his scrap home to Ramsey after the T.T.; but Brough has pressed one of his Swiss customers, Rudolph Banner, of Zurich, into the service, and he will be number one, never having ridden in a competition.

The B.S.A. people have three teams entered (two solo and one passenger), whilst

The B.S.A. passenger team. (From left to right) T. Hunter, A. Shepherd, and D. S. Milne, all on 6-7 h.p. machines.

Rovers divide their nine men into one solo team and two passenger trios. Gear ratios vary incredibly. The Hawker sidecar has one of the coveted new Sturmey-Archer lightweight three-speeds, with ratios of $5\frac{1}{2}$, 10 $\frac{1}{4}$, and 17, whereas the emergency gear of two of the Brough Superiors is 5.2 to 1. Eaton's Brough has its Lucas switchboard and Bonniksen speedometer very neatly mounted in an old Harley tool-box on the top of the tank. The solitary Cedros entry has a Moss three-speed box. H. F. S. Morgan has very wisely brought up a machine with a short wheelbase and plenty of ground clearance—he is using a water-cooled J.A.P. engine. The rules demand touring head lamps. Many riders have hastily purchased lamps of the hen's egg variety. The general opinion is that very little will be seen of the sidecar after the trial once enters the "doorstep" districts. One or two machines are equipped with a very taking little French speedometer—the Jaeger. Cased in aluminium, its weight is far below the average. The driving pinion is fixed to three front wheel spokes by hook bolts. Carfrae is driving his 1915 2 $\frac{3}{4}$ h.p. A.J.S., having failed to get delivery of a

new model in time. Several machines are fitted with the Dawson patent nail catcher, quite the neatest device of this pattern which I have seen. The Metro-Tyler has a Blackburne engine. The New Imperial outfit has a luggage carrier extending

are by way of being "gadget merchants," and Fenn runs Harold Karslake close for the championship in this department. Fenn has a pneumatic saddle cover, a haversack holder on his rear forks, a carbide tin container enamelled in Raleigh

The Martinsyde passenger team—J. T. Bashall, E. Simms, and E. H. Gifford.

forward of the sidecar, which is generally mistaken for a life-saving apparatus. The beautiful running of the Raleighs arouses much favourable comment. Nothing has a quieter tick-over. The Raleigh riders

colours, and drawers under his foot plates containing spare chains embedded in molten grease, not to speak of a vermilion knob on his gear lever.

Karslake is quite depressed, for against this formidable list of extras he can only muster on his Brough a complete set of chain shields, a special route card-

A Coventry sidecar and solo trio on 5-6 Rovers—G. L. White, E. S. Astley, and D. A. Atkin.

Carbide carrier enamelled to match the tank, and an extra tool bag on the leg shield of A. G. Fenn's Raleigh.

(Left) A Scott trio. The riders are: W. F. Scott, W. Moore, and H. Langman. (Right) Little two-strokes to conquer big hills. The Hawker team: T. O. M. Sopwith, P. R. Dowson, and L. H. Wells.

Extra half-gallon petrol tank operated by air pressure on Westwood Wills's Powell.

day or two. A number of entrants have no conception of what is before them. A certain car driver was asked what provision he had made for extra cooling water in the five-mile climb to Tornapress. He was quite indignant, stating that his car had come all the way from

holder, and handle-bar clips for the grease gun. One of the Humbers mounts a pair of spark intensifiers. R. B. Clark's countershaft Zenith has a ratchet for holding the clutch out, and its chain is enclosed in an airtight aluminium case. The organisation of petrol supplies in what a golfer would term the "tiger country" is better than of old, thanks to the ubiquitous motor lorry; but several riders will carry auxiliary tanks. Westwood Wills has a neat example under the saddle of his Powell, and uses a tyre pump to obtain the necessary pressure for transferring the "juice" to the main tank.

Route marking is to be carried on by a Ford car specially fitted up for the purpose. The floorboards on the rear side of the rear compartment of the body have been cut out to accommodate a large "powder mill," fitted with a shaking grid and operating handle. Beneath the

hole is a tin chute. Thus the yellow ochre can be laid without stopping the car or staining its occupants. This year the ochre will be in "blobs" instead of streaks.

Tyres for Hill-climbing.

Unless rain falls early in the week, dust will play a notable part in the week's work, choking carburetters and acting as an abrasive inside engines. If rain comes, there will be a great deal of skidding, as the long drought has made all the roads exceptionally loose. The side-car men in many cases speak highly of the Stepney road grip cover for their driving wheels on steep hills, as its substantial crossbars afford a good grip. The solo men are less agreed in their tyre selections, but a good many tyres are too small for their job.

There will probably be rather a slaughter of the innocents during the first

London, and never lost a drop! Several motor cyclists, new to a Scottish Six Days, innocently await similar disillusionments. Meanwhile the heat is terrific.

There is always a light breeze in Edinburgh on the calmest day; to-day's breeze feels as if it came straight from the Sahara, and our Scottish hosts find the weather a noble ally in their annual work of discovering how much liquid refreshment English motor cyclists can—should we say "swallow," or "stand"? But, whatever weather awaits us, with a sporting course to follow, and a sporting club in command, we are assured a jolly week, and everybody is glad to see the British factories supporting this event as it has always deserved to be supported. Until this year the club has always lost money on the trial, and has continued to spend its funds for the benefit of the sport. This year a record entry should imply a small profit.

The Scottish Six Days Trial.—

HEAT WAVES AND ROAD WAVES ON MONDAY.

VERY few of the competitors slept on Sunday night. It had been one of the hottest days of the year, and those who were not tortured by dreams of Amnree were thinking of engines cooled by hot air. Day dawned with a dull grey sky, apparently full of rain, and for once it would have been welcome. A light drizzle actually fell between seven and eight, but it soon cleared off and another heat wave was promised.

There were several alterations in the list of entries. R. Banner (8 Brough

A steel drawer is fitted under the footboards of the Raleigh entry. Each drawer contains a spare chain packed in grease.

Superior) is riding in place of Watson-Bourne; Norman Black (Omega) fills the No. 20 vacancy in the programme; R. Elliott (3½ Rover) takes Brandish's place; A. Farr (B.S.A.) rides in place of A. Wood, C. Christie instead of W. C.

A Raleigh team, to demonstrate big flat twins on Scottish hairpin corners—F. W. Viles, A. G. Fenn, and K. Holden.

Hemy (7 A.J.S. sc.), and E. Simms has taken over W. H. Bashall's 6 h.p. Martin-syde sidecar. Bashall was struck by a piece of concrete during the 500 miles race, and was delayed in that event for half an hour, hence his second instead of first place. D. S. Alexander was a non-starter owing to injuries sustained while practising for the Scottish Speed Championships on Saturday.

The competitors started in pairs at one-minute intervals, except that a gap of three minutes was allowed after each pair of four-wheelers had been despatched. This was distinctly necessary, in view of the probable dust and the narrow roads. The first forty miles on Monday were extremely tedious, as they lay through a grimy district with many tramlines and much heavy traffic

on nearing Stirling. Sections of the road reminded one of the devastated areas, for, although it is a main route, it's ploughed into colossal pot-holes and high ridges. Anybody attempting to tackle it at ordinary touring speeds would infallibly be thrown. The route marking so far had been excellently done, the yellow ochre showing up well.

To-day (Thursday) the route is from Inverness *via* Dalnacardoch, Kenmore, Killin, Dalmally, to Oban, there being no observed hills; but to-morrow (Friday), in the run from Oban *via* Lochgilphead, Inveraray, Leanach, Otter Ferry, Inveraray, Cladich, Dalmally, back to Oban, there will be Ballochandrain (one of the new hills) to be negotiated. Saturday's run is over main roads back to Edinburgh.

W. Peathey on a 2½ h.p. Hawker sidecar, the lowest-powered outfit in the trial.

CONTRASTS.

Familiar figures in the big trial. H. Karslake and Geo. Brough on 8 h.p. Brough-Superiors.

400 ENTRIES IN SOUTH WALES HILL-CLIMB.

Successful Event at Catsash Hill, near Newport, Mon.

A. Jenks (3½ Norton sidecar) on the finishing mark after a splendid climb. Observe the "orchestra stalls" behind the hedge.

BROILING heat and dazzling sunshine sums up the weather conditions under which the open event A.C.U. took place at Catsash Hill, near Newport, Mon., on Saturday last. The event had been well advertised, and reaped the reward, attracting no fewer than 400 entries, including many well-known riders of the sporting motor cycling world.

A Popular Venue.

Catsash Hill is a turning off the main Newport-Chepstow road, at the milestone four miles from Newport and twelve from Chepstow. Attracted by the event and entries, huge crowds of motorists wended their way to this spot for an interesting and exciting half-holiday.

The organisation was excellent. All motor traffic was skilfully piloted into adjoining fields before reaching the starting point, and these presented a fine spectacle.

The hill is straight and the whole course could be seen from the starting point, and was bordered by a grass verge and low bank and hedge. The length was a measured half-mile; average gradient, 1 in. 14. The start was on the level and the finishing line was on the hill itself.

The Norton riders had a field day, for G. W. Walker, Alex Lindsey, J. Thomas, and A. Jenks were all outstanding per-

formers on this make. Fastest time of the day and a number of both solo and sidecar wins fell to the first mentioned.

Harry Church (2½ Velocette) on the finishing line. He won several events.

RECORDS BEATEN IN THE 500 MILE RACE AT BROOKLANDS.

IN a race of 500 miles, such as the recent event for the Miller Cup, when the winner averaged over 70 m.p.h., and even the lightweight over 50 m.p.h., many long distance records were bound to be beaten. The B.M.C.R.C. has now issued the official results, which are identical with those given in last week's issue of *The Motor Cycle*. It is, therefore, now possible to record the times which broke records existing on that date. They are as follows:

CLASS E.—1,000 c.c.

The Team Prize has been awarded to the Martinside riders, H. Bowen, J. T. Bashall, and W. H. Bashall, 11th, 13th, and 23rd to finish, respectively.

None of the other teams succeeded in qualifying for an award.

SCOTTISH SPEED CHAMPIONSHIPS.

Excellent Racing at St. Andrews.

On the sands at St. Andrews The start of the mediumweight championship, which was won by J. R. Alexander on a $3\frac{1}{2}$ h.p. Douglas.

THE annual speed event promoted by the Scottish Auto Cycle Union was held at St. Andrews on Saturday last under favourable weather conditions. The condition of the sand might easily have been better from the speed point of view, but, nevertheless, some very fast times were recorded. Several machines were making their first appearance in the event, and after its many misfortunes in the T.T. much interest was centred in the Massey-Arran. In addition three $2\frac{1}{2}$ h.p. T.T. A.J.S.'s were on view, and speculation was rife as to the ultimate winner of the 350 c.c. class.

The Lightweights.

Class 1—the Scottish featherweight speed championship—provided a keen race between D. B. Calder ($2\frac{1}{2}$ New Imperial) and R. M. Wilson ($2\frac{1}{2}$ Hobart). Up to the last lap the former was leading, but to the surprise of the spectators Wilson was first past the post, Calder having plug trouble in the last mile.

Class 2.—The twenty mile $2\frac{3}{4}$ h.p. speed championship was won by A. L. Downie ($2\frac{3}{4}$ A.J.S.), whose riding was most consistent, his lap times being 2m. 19s. for

nearly every lap. At the end of the first lap, George Kelby ($2\frac{3}{4}$ A.J.S.) led, but a choked jet let Downie into leading place, which he never lost. It is singular to record that the first lap from a standing start was in every event the fastest.

In the $3\frac{1}{2}$ h.p. championship the surprise of the afternoon was the riding of G. M. Black ($3\frac{1}{2}$ Norton), who led from the start, but was unfortunate in the last lap by getting water on his plug, causing him to stop; thus first place was secured by J. R. Alexander ($3\frac{1}{2}$ Douglas), with R. W. Loughton ($3\frac{1}{2}$ N.U.T.) second.

The heavyweight speed championship was won by R. J. Braid (7-9 Indian), who led from the start, with R. Boyack (7-9 Indian) second.

J. R. Philipps ($2\frac{3}{4}$ Blackburne), in the open one lap race, put up a very fine performance in beating Downie and Walker on A.J.S.'s. Had the winner not had plug trouble in the championship event, it was evident that Downie would have had a harder struggle for his success.

The cornering of the majority of the riders was none too good, and it was interesting to watch the various methods of rounding the turns. G. W. Glen ($3\frac{1}{2}$

Sunbeam), a past holder of the $3\frac{1}{2}$ h.p. championship, was very speedy at the turns, but appeared to take them too wide.

As usual in an event of this nature, several minor mishaps prior to the race prevented several of the prominent riders from taking part. D. S. Alexander was run into in practice, and, his hand being severely damaged, was prevented from competing.

The Edinburgh M.C. won the team prize. Results:

CLASS 1 (Scottish Featherweight Championship).—R. M. Wilson ($2\frac{1}{2}$ Hobart), time 15m. 50s.

CLASS 2 (Scottish Lightweight Championship).—A. L. Downie ($2\frac{3}{4}$ A.J.S.), time 23m. 35s.

CLASS 3 (Scottish Mediumweight Championship).—J. R. Alexander ($3\frac{1}{2}$ Douglas), time 24m.

CLASS 4 (Scottish Heavyweight Championship).—R. J. Braid (7-9 Indian), time 21m. 51s.

CLASS 5 (Private owners, 350 c.c.).—J. W. Walker ($2\frac{3}{4}$ A.J.S.), time 7m. 37s.

CLASS 6 (Private owners, 500 c.c.).—J. G. McEwen ($3\frac{1}{2}$ Norton), time 6m. 48s.

CLASS 7 (Private owners, 1,000 c.c.).—J. W. Walker ($2\frac{3}{4}$ A.J.S.), time 7m. 13s.

CLASS 9 (One lap, open, 350 c.c.).—J. R. Philipps ($2\frac{3}{4}$ Blackburne), time 2m. 8s.

CLASS 10 (One lap, open, 500 c.c.).—G. M. Black ($3\frac{1}{2}$ Norton), time 2m. 3s.

CLASS 11 (One lap, open, 1,000 c.c.).—R. Boyack (7-9 Indian), time 1m. 59s.

R. W. Wilson ($2\frac{1}{2}$ Hobart), who won the featherweight championship.

A. L. Downie ($2\frac{3}{4}$ A.J.S.), winner of the lightweight speed championship

J. R. Alexander ($3\frac{1}{2}$ Douglas), winner of the mediumweight championship

R. J. Braid (7-9 Indian), winner of the heavyweight class.

SCOTTISH SPEED CHAMPIONS FOR 1921.

BROOKLANDS MEETING FOR M.C.C. RIDERS.

Nine Closed Events all carried off by
Prominent Track Exponents.

THERE were many close finishes, while high speeds were the order, at Brooklands, on Saturday, when a meeting organised by the M.C.C. took place. From the spectators' point of view, however, the great heat, especially noticeable in the neighbourhood of the track, was almost unbearable.

Three handicap races for solo machines not exceeding 350 c.c., 560 c.c., and 1,000 c.c. respectively, were first run off; the first seven in each event being eligible for the "Harry Smith" Gold Challenge Cup race.

Tudor Thompson (2½ Douglas) with a handicap of 2m. 9s. behind the limit man ran into first place in the 350 c.c. race, while H. Le Vack (¾ Indian) won from F. A. Longman (¾ Ariel) by twenty-seven yards in the next race.

In the third event C. F. Temple (7-9 Harley-Davidson) made a splendid performance, his machine lapping at over 90 m.p.h.

Three three-lap handicap races followed for machines of similar capacities, and these were won by S. R. Axford (2½ A.J.S.), H. Le Vack (¾ Indian), and C. F. Temple (7-9 Harley-Davidson) respectively.

A handicap sidecar race of two laps followed, open singles of any capacity, and this was won by F. A. Longman (¾ Ariel sc.) with 1m. 22s. start from the scratch man, D. R. O'Donovan.

In the multi-cylinder three lap sidecar handicap, H. Le Vack (7-9 Indian sc.)

O'Donovan's new racing sidecar, in which his passenger "goes to bed."

won from scratch. The principal award in this event was the Starley Cup.

The final event was the M.C.C. Championship for the Harry Smith Gold Challenge Cup, this being a five lap handicap race; the cup was secured by C. F. Temple, whose Harley-Davidson was again in fine fettle, and averaged over 91 m.p.h. Results:

HANDICAP RACE (3 laps, up to 350 c.c.).—1, Tudor Thompson (2½ Douglas); 2, H. F. Brockbank (2½ Brockbank); 3, J. F. Hull (2½ Wooler). Winner's speed, 66 m.p.h.

Also ran: S. R. Axford (2½ A.J.S.), Kaye Don (2½ Massey-Arran), A. Prestwich (2½ Dot-Jap), W. G. Churchill (2½ Verus), A. F. Edwards (2½ Coulson-Jap), H. Brockbank (2½ Brock), J. S. Holroyd (2½ New Scale), F. A. Applebee (2½ Lewis), J. F. Hull (2½ Wooler), F. A. Longman (2½ Wooler), A. E. Gelder (2½ F.N.), H. W. Harrington (2½ Douglas), R. L. Richardson (2½ Alecto), S. Wayne (2½ Morris-Warne), W. Julian (2½ Lewis), D. J. Stone (2½ Orbit), and A. G. Prior (2½ Villiers).

HANDICAP RACE (3 laps, from 350 c.c. to 560 c.c.).—1, H. Le Vack (¾ Indian); 2, F. A. Longman (¾ Ariel); 3, J. A. Peacock (3 A.B.C.). Winner's speed: 74 m.p.h.

Also ran: Kaye Don (3½ Norton), R. M. Knowles (3½ Norton), C. C. Labin (3½ Indian), C. Pearson (3½ Douglas), C. N. Green (3½ Rover), P. Cunningham (3½ P. and M.), and H. C. Nias (4 Triumph).

HANDICAP RACE (3 laps, from 560 c.c. to 1,000 c.c.).—1, C. F. Temple (7-9 Harley-Davidson); 2, H. Le Vack (7-9 Indian); 3, Kaye Don (8 Zenith-Jap). Winner's speed, 88.3 m.p.h. Also ran: F. C. Townsend (8 Zenith-Jap), and J. McBirnie (7-9 Indian).

SCRATCH RACE (2 laps, not exceeding 350 c.c.).—1, S. R. Axford (2½ A.J.S.); 2, Tudor Thompson (2½ Douglas); 3, Kaye Don (2½ Massey-Arran). Winner's speed, 67.7 m.p.h.

SCRATCH RACE (3 laps, not exceeding 560 c.c.).—1, H. Le Vack (¾ Indian); 2, S. R. Axford (2½ A.J.S.); 3, C. Pearson (3½ Douglas). Winner's speed, 68.4 m.p.h.

SCRATCH RACE (3 laps, 560 c.c. to 1,000 c.c., for O. C. Godfrey Cup).—1, C. F. Temple (7-9 Harley-Davidson); 2, H. Le Vack (7-9 Indian). Winner's speed, 88.78 m.p.h.

HANDICAP RACE (2 laps, any single-cylinder sidecar).—1, F. A. Longman (¾ Ariel sc.); 2, D. R. O'Donovan (¾ Norton sc.); 3, V. Olsson (¾ Sunbeam). Winner's speed, 48.8 m.p.h.

HANDICAP SIDECAR RACE (3 laps, any multi-cylinder, for J. K. Starley Cup).—1, H. Le Vack (7-9 Indian sc.); 2, O. de Lissa (8 Moto-sacoché sc.); 3, J. A. Masters (7-9 Harley-Davidson sc.). Winner's speed, 71.7 m.p.h.

M.C.C. CHAMPIONSHIP HANDICAP (5 laps, for Harry Smith Cup).—1, C. F. Temple (7-9 Harley-Davidson); 2, F. A. Longman (¾ Ariel); 3, H. Le Vack (¾ Indian). Winner's speed, 91 m.p.h.

Also ran: S. R. Axford (2½ A.J.S.), Tudor Thompson (2½ Douglas), A. H. Prestwich (2½ Dot-Jap), J. A. Peacock (3 A.B.C.), P. Cunningham (3½ P. and M.), H. C. Lias (4 Triumph), and J. F. Hull (2½ Wooler).

THE MOTOR CYCLISTS' PARLIAMENT.

Policy of Auto Cycle Union Criticised. 30,000 Members.

AT the second meeting of the A.C.U. General Committee at Taunton on July 8th, at which some twenty-four members attended, there was little business to record which was really interesting. The attendance, as usual, was mainly from London, but among those present we noticed Mr. S. L. Bailey from Bristol, Mr. Q. A. Nicol from Newcastle-on-Tyne, and Mr. E. Featherstone from Cheltenham. The chair was ably occupied by Col. F. S. Brereton, C.B.E.

In the minutes mention was made of the membership of the A.C.U., and in reply to Mr. Thomas, Mr. T. W. Loughborough (the Secretary) mentioned that the number of members was some forty per cent. below the figures for the corresponding period last year—rather under 30,000. The matter was discussed by several members at considerable length, and it was generally agreed that the cause of the decline was due to the increased subscription, or more probably to the fact that the Union had failed to convince its members of the benefits it offered.

Messrs. S. L. Bailey and W. H. Wells contended that the A.C.U. should cater

more for the man in the street and on the road, and not devote so much time to competitions. Considerable discussion then ensued, which concluded with a speech by the chairman, in which he pointed out that he noticed with regret that all motor cyclists were not united in one body.

There was little of interest arising out of the minutes of the Competitions Committee meetings.

One of the few important points referred to in the Competitions Committee report was that the A.C.U. had now decided to insist that T.T. helmets must be worn in all open speed events and open hill-climbs, and it was also laid down that all courses on which open speed events were to take place should be inspected to see if they are suitable before a permit can be granted. Some discussion ensued as to whether the course in Clipstone Park, selected for the E. Midland Centre speed trials, really needed to be inspected, and it was pointed out that a plan of the course to the scale of 25in. to the mile must be submitted, on which the positions to be occupied by spectators must be indicated. Reference was then made to the cham-

Fewer Competitions Proposed.

pionship scheme, which had been considered by the Competitions sub-Committee, and was reported on as being unworkable. Lengthy discussion ensued, and Major Axford mentioned that six centres had promised it support.

Mr. Loughborough said he thought the scheme excellent from the Centre's point of view, but there would be difficulties in the organisation, and it would be hard to tell how much the champion would owe to his prowess or to his machine.

Mr. S. L. Bailey moved an amendment to the effect that, instead of championship, the scheme should be known as the reliability premiership; this was put to the meeting and carried.

The budget provoked some discussion, as certain members felt that the organisation was costing more than the result in membership warranted. The Secretary pointed out that the cost of looking after the interests of motor cyclists was high, and amounted to more than in the case of car owners. The applications for affiliation from twenty-nine motor cycle clubs were then accepted.

After tea the delegates were taken for drives in the country by the local club, and entertained to a smoking concert.

CURRENT CHAT (Continued from p. 54).

"Six Days" go to Devon.

On August 30th and 31st this year's Six Days Trials will follow routes in the Taunton district. It is nine years since the trials touched Devonshire.

A Midland Racing Track?

At a supper in honour of the I.T. winners Mr. J. Howell, of the Worcester and District M.C.C., foreshadowed the possibility of a racing track, similar to Brooklands, in the vicinity of Worcester. They had the ground in Worcester, he said, which would provide a two-mile course, and it was thought that Midland manufacturers would support events at such a convenient centre.

An International Race.

Thirty-six entries have been received for the Grand Prix race at Le Mans on the 24th inst. Jolly (on an Alcyon) is No. 1, de la Hay (Sunbeam) No. 2, and Le Vack (Indian) will be the third to start in the 500 c.c. class. In the 350 and 250 c.c. classes the leading men are Meunier (Alcyon) and A. Milner (Levis).

Out of fifty-seven entrants there are sixteen British riders and twenty-seven British machines. There are also twenty-eight French machines, one Italian, and one American, so that the race is of an international character.

Imports and Exports.

As was to be expected, last month's imports and exports were much below the average. Only seventy-one motor cycles were imported, and these were valued at £6,111. Compared with June last year, this number is a reduction of 172 machines.

EXPORTS.

June export figures show that we sent out of this country half the number of machines compared with the same month last year. The figure is 722, and, curiously enough, the comparison is similar if we take June, 1913, when we exported 1,419 machines.

The following table shows comparative numbers and values of motor cycles exported in June, 1913, 1920, and 1921:

	1913.	1920.	1921.
Value of motor cycles	£62,416	£105,733	£54,792
No. of motor cycles	1,419	1,405	722

The value of parts and accessories exported in June amount to £19,374.

Efficient Silencers.

Recently several motor cyclists have been summoned at Leicester for having "a silencer that was inefficient." As one of these riders was the owner of a Villiers-engined machine, the makers of this engine took up the case in the interests of the many riders using their engines.

Several other firms supported them, and on the machine being tried on the road for the edification of the court, the Chairman remarked that it was a stupid case, and dismissed it without further comment.

THE GRAND PRIX RACE.

A FEW more tickets are still available for readers of *The Motor Cycle* for the grandstand for the Grand Prix race. It will be recalled that a certain number of tickets were reserved by this journal on behalf of readers of *The Motor Cycle*, a specially good position being chosen for the block. Similar arrangements were made by *The Auto-car*, and in this case all the car tickets have been snapped up by readers. There remain, however, a few tickets for the motor cycle Grand Prix at the price of 4s. 6d., and immediate application for these should be made to the Editor of *The Motor Cycle*, 20, Tudor Street, London, E.C.4, or at Coventry.

Garage tickets are also available for the day of the motor cycle race at a cost of 4s. 6d. An estimate of the cost of the trip to the coast will be found on page 36, together with advice on how to reach the course at Le Mans and other details in connection with taking a machine across the Channel.

CLUB NEWS. (Continued from page 43.)

South Midland Centre A.C.U.

The trial announced for next Saturday will start from Berkhamstead at 9.30 a.m., instead of Watford at an earlier hour, as previously announced.

Bristol M.C.C. and Bath and West of England M.C.C.

On Saturday last the two clubs held a joint trial for the challenge shield at present held by Bath. A forty mile circuit of a most sporting nature between the two headquarters was covered twice, and on each round five observed hills having extremely difficult surfaces were encountered. There were six solo and three sidecars in each team, and it appears that the Bath M.C.C. will retain the trophy, but the results are not yet announced.

Bedford and District M.C.

A reliability run was held on July 3rd from Bedford to Hunstanton and back, and allowing for a certain amount of dust due to the dry condition of the roads the going was excellent throughout. The results, decided on a secret check, were as follows:

ALLEN CUP AND CLUB MEDAL.—J. George (7-9 Harley-Davidson sc.), 1 mark lost.

HUMPHRIES CUP AND CLUB MEDAL.—T. Garner (4 Triumph), 2 marks lost.

SILVER MEDAL.—A. Bristowe (Premier cycle car), 2 marks lost.

BRONZE MEDALS.—J. C. Hines and H. Harbott, 3 marks lost.

TEAM PRIZE.—A. R. Lindley (Henderson sc.), A. Bristowe (Premier cycle car), and T. Garner (Triumph).

A picnic is arranged at Filmerham Vicarage, at the invitation of the Rev. L. R. Levett. Members desiring to attend should notify the secretary to-day.

Northern M.C. (Newcastle).

The most successful trial of the year was held in the Lake District on July 3rd and 4th. The weather was perfect, and the first day's run was to Keswick, via Whitfield (where an observed freak hill was included), Alston, and Penrith. All the competitors checked in at Keswick. The second day's run was about 200 miles, and included a number of observed hills. A circular course led from Keswick over the Winlatter Pass to Buttermere Hause, over the Newlands Pass, and back to Keswick; all these parts were observed. The course next led to Grasmere, up Red Bank, then to Ambleside, and over Kirkstone Pass to Penrith for the lunch stop. This portion of the course eliminated a large number of the competitors, but a secret check was taken between Penrith and Alston on the homeward run. The results are as follows:

ANDERSON CUP.—S. Donkin (10 Henderson).
ZENITH MEDAL.—H. Ellis (2½ Douglas).
GOLD MEDAL.—K. Dixon (3½ Sunbeam).
SILVER MEDALS.—T. A. Carlile (7-9 Harley-Davidson) and H. Tanaka (10 Henderson sc.).
BRONZE MEDAL.—C. L. Nordman (7 A.J.S. sc.).

East Midland Centre A.C.U.

A championship trial was held on July 3rd over a thoroughly good course in the Peak District. There were eleven checks, each being, roughly, ten miles apart; thus strict maintenance of schedule was essential. One interesting feature was the restarting and acceleration test made immediately after the lunch stop; machines had to be started from cold, and cover twenty-two yards. In this test the best time (5s.) was made by H. Widdowson (3½ Scott). G. Brough

(8 Brough-Superior sc.) was the best sidecar in 6½s. The awards are as follows:

1. G. Brough (8 Brough Superior sc.).
Best performance of Lincolnshire resident: J. E. Harston (8 Campion).
Best performance of Leicestershire resident: W. Chapman (7 A.J.S. sc.).
Best performance of Derbyshire resident: S. Ratcliffe (8 Brough Superior).
Best two-stroke: H. Widdowson (3½ Scott).
Team prize: Nottingham and District M.C.C., consisting of W. E. Brough (5-8 Brough sc.), A. G. Penn (5-6 Raleigh), and H. Widdowson (3½ Scott).

Gold medals were also awarded to: A. Doughty (6 Martinsyde), S. S. Dehenham (3½ Brough), H. Karslake (8 Brough Superior), T. L. Vickers (3 A.B.C.), G. W. T. Hartwell (3 Beardmore), E. A. C. Oliver (6 Morgan), A. C. Robinson (6 Sunbeam), and N. U. Jones (4 Norton).

SPEED TRIALS AT WESTCLIFF.

ON page 53 we publish illustrations and time results of the speed trials organised jointly by the Essex M.C. and the Essex County and Southend A.C. In many cases the first place winners on time also took the formula prize. The exceptions are as follows:

250 C.C. CLASSES.—Any Type, Flying Start: H. Newey (2½ Lewis). Standard Touring, Flying Start and Standing Start: J. V. Prestwich (2½ Massey-Arran-Jap).

350 C.C. CLASSES.—Any Type, Flying Start and Standing Start: A. A. Swann (2½ New Imperial). Standard Touring, Flying Start: J. V. Prestwich (2½ Massey-Arran-Jap).

500 C.C. CLASSES.—Any Type, Flying Start: A. A. Swann (2½ New Imperial). Standing Start: F. W. Applebee (2½ Lewis). Standard Touring, Flying Start and Standing Start: J. V. Prestwich (2½ Massey-Arran).

750 C.C. CLASSES.—Any Type, Flying Start and Standing Start: J. V. Prestwich (2½ Diamond-Jap). Standard Touring, Flying Start and Standing Start: J. V. Prestwich (2½ Massey-Arran-Jap).

UNLIMITED CLASSES.—Any Type, Flying Start: A. A. Swann (2½ Dot-Jap). Standing Start: J. V. Prestwich (2½ Diamond-Jap). Standard Touring, Flying Start: J. V. Prestwich (2½ Massey-Arran-Jap).

Schrader Universal TYRE VALVE

CONVERSIONS.

The valves on your present tyres— if not already "Schrader Universals," can be adapted to the "Schrader Universal" principle at a trifling cost. And then you will have no inconvenience from leakages arising from perished valve rubbers or other cause. Write to us for particulars.

Godbolds.

You cannot guess it.

THERE is a correct air pressure for your tyres. Over inflation means discomfort and the risk of bursts and blow outs; under inflation means drag, rapid wear, and more punctures. If you have a sidecar, unequal inflation means wobble and an extra heavy strain on tyres and steering.

You cannot *guess* the correct pressure, but you can be certain it is right if you have "SCHRADER. UNIVERSAL" CYCLE TYRE VALVES, because you can test them easily. And they keep the pressure right because they are absolutely airtight. "SCHRADER UNIVERSALS" are one-piece jointless valves; they are dust and oilproof and need no adjustment for inflation. "Insides" are easily removed or replaced by using slots of valve cap as key. They require less frequent inflation. Insist on having them and ensure a minimum of tyre trouble.

"Insides"—in dustproof boxes containing five—obtainable from all good dealers. Illustrated Booklets post free.

WRITE FOR DESCRIPTIVE BOOKLET TO THE PATENTEES AND MANUFACTURERS:

CHARLES H. PUGH LTD
WHITWORTH WORKS, BIRMINGHAM.

Model 64-D. is the same as B. with double dress-guard and foot-rest attached. Dress-guards and foot-rests 1/- extra. Will fit on B. at any time.

TYNESIDER

PILLION RIDING DE-LUXE.

OUR SPECIAL OFFER.—Our offer to take any other make of seat in exchange for our TYNESIDER PILLION SEAT is withdrawn for a period. We have been compelled to do this owing to the unexpected number sent to us. We have a quantity of other make's taken in exchange, repainted, price: 25/-, postage 1/6 extra. When you purchase a seat from us we are always prepared to keep you up-to-date and exchange your old seat for new at a small cost. No need to have a hobby or old type seat. Purchase from us and we will see that you get the best.

All these seats are fitted with Cantilever spring seat, four Cantilevers being used. Adjustable springs at each side. Adjustable for child or adult.

Model 64-B. Very low seating position, about 14 in. from carrier. A safe seat, no swaying and soundly finished, 45/- handles 2/6 each extra.

Model 64-C. is the same as B. with stirrups attached. Stirrups 7/6 pair extra. Fitted with rubber rests and are adjustable.

Any part detached in a few minutes. Fits any carrier by adjustable hooks and screws. 8 different seats can be made with model 64-B.

Ask for Henderson's Tynesider Pillion Seat. Have no other or you will be disappointed. Henderson is the original inventor of pillion seats.

Any good up-to-date trader will supply you. Ask Halford, Rudger, Whitworth, etc.

Buy from the original makers of pillion seats.

Any part may be detached in a few minutes. Folding back-rest, handles, folding dress-guards, may be fitted to any of our other models.

H. Shows how the seat E, F, & G. fold up and tucks away on the carrier when not in use. Luggage may be packed on seat, thus making a spring carrier.

G. shows dress-guard of E, F, & D. all folded, leaving the footboard or child's use, or may be fully opened for adult's use.

All seats finished in Black and old. Plated fittings.

We have a few shop-soiled 1921 seats at 21/-. These are supplied direct only.

Model 64-E. is the same seat as D. with folding back-rest and double dress-guard attached. Folds up like H. or G. Complete £3 10 0.

Model 64-F. is the same as E. showing arm rests down if required. Seat same as B. Folds up like G. and H. Complete £3 10 0.

DOT MOTORS

(HARRY REED, Proprietor)

ELLESMERE STREET, HULME, MANCHESTER.

The ideal lightweight outfit.

Send now for the Dunhill Illustrated Catalogue of Sidecars. Simply tear out this advertisement, write your name and address in the margin, and post to us.

ALL Dunhill Sidecar Chassis embody the triangular frame design of which we were the original patentees (No. 4784/15). This design gives the strongest possible chassis which is yet exceedingly light in weight. Dunhill Chassis satisfactorily do the work of other chassis more than twice their weight.

Obviously, then, the Dunhill patent triangular design material reduces running cost and enables you to get better service from your sidecar outfit. The triangular frame design is described and illustrated very carefully and thoroughly in our catalogue, copy of which we shall be happy to send on request.

Dunhill's Lightweight body, model B.36, suitable for machines up to 2 h.p. Smartly finished, attractive design, strongly made, very light in weight, with ample room for tools and a plenty of room. With or without door. Standard of low-green upholstery red leather cloth to match.

Price, mounted on A.35 chassis as described above... **£230.**

Illustration shows our Model A.33 Under-run Lightweight Chassis. This chassis is suitable for use with machines up to 3½ h.p. The patented triangular principle upon which it is constructed gives exceptional strength and rigidity combined with minimum weight. Frame distortion is totally impossible. It gives a new and comfortable riding position.

The three-point attachment fittings are machined from the solid steel bar, thus eliminating all risk of breakage at these points.

Price of chassis only **£18.**

TESTIMONIAL.

Redcor, 26-3-21

Dear Sirs,

Reference my Douglas Motor Cycle,
let me here say how very delighted I
have been with this machine. I have
covered over 2,800 miles during the past
12 months, with NO trouble.

Thanking you for your courtesy and
attention at all times.

Yours faithfully, D.R.B.G.

Why Colmore of course!

To the Motor Cyclist who has but once experienced the advantage of dealing with the Colmore Depot there is henceforth but one place whenever he wants anything "Motor Cyclish." And when a chum asks him advice as to the best place to get a new machine—spares, accessories, etc., it is never a case of "You might try the Colmore," but rather an unhesitating, decisive reply—"Why, Colmore OF COURSE."

For every customer of the Colmore Depot knows that there he gets a *little* more attention, a *little* more value for money, and a *lot* more satisfaction. *THAT* is why we have customers all over the British Isles.

WONDERFUL VALUE NEW B.S.A.

4 1/2 h.p. 3 speed, fresh from works, complete with high class sidecar.

Price £123.

The Auto Cycle Union.

WHEN the membership of an institution like the Auto Cycle Union drops 40% in twelve months—and this at a time when the number of motor cyclists has increased tremendously—the question naturally arises whether there is not something wrong with the policy of the organisation. The Auto Cycle Union is the governing body of the motor cycle movement, yet, as its membership roll shows, it represents but 10% of motor cyclists in this country—insufficient to justify the position as dictator in so many vital matters.

That a governing body is desirable—in fact, is necessary—will not be denied by all who have at heart the interests of the sporting side of the movement. This duty the Auto Cycle Union fulfils in a manner which has set a standard to the world, and, to do this, even a membership of 30,000 is sufficient. It is, perhaps, this side of the A.C.U.'s good work which is responsible for the comparatively low membership. The competition work of the Union, by its very success, overshadows its efforts in other directions. The great majority of motor cyclists, while appreciating the value of competitions, do not feel disposed to pay subscriptions "to improve the breed of motor cycles." The Automobile Association, on the other hand, is admittedly a business proposition, and probably its popularity is due to the fact that its main object is to provide service to the individual rider.

Elsewhere in this issue there appears a short article by the Chairman of the Auto Cycle Union, in which the question of amalgamation of all motoring bodies is discussed. As to whether such an amalgamation would prove advantageous to the motorist is a moot point, but certainly no harm would come from an examination of the situation. Probably a working arrangement between the bodies concerned would be better than to have everything controlled by one board, but in legislation matters united action is an absolute necessity.

The drop of 40% in the A.C.U. membership synchronises with the raising of the subscription. This was done at a most inopportune time, and, if any organisation is to receive the support of the majority, the subscription must be much less than the present fee.

Spring Frames.

ONE of the most difficult problems that has been set before the motor cycle designer is that of constructing a spring frame which shall be laterally rigid and flexible in action, but not unsightly, heavy, or costly. The last item has undoubtedly proved a severe handicap in recent times, when all have been endeavouring to reduce the selling price of their productions. Some riders, who have had experience of unsatisfactory devices, are inclined to stigmatise rear springing as unnecessary and even undesirable, but with them we cannot agree. There are rear suspension systems on the market which are perfectly satisfactory, and not only increase the comfort of the rider to a very considerable degree, but also save the mechanism of the motor cycle from many strains. Such faults as leaky tanks, fractured frames, and loosened nuts have been unduly prominent in recent competitions, and good rear suspension would do much to eliminate these troubles.

In the meantime, many forms of auxiliary suspension for the rider have made their appearance, and so excellently do some of these perform their function, that both riders and manufacturers are apt to be content with the substitute instead of racking their brains in an endeavour to achieve perfection. It must, however, always be remembered that, no matter how perfect the saddle suspension, the object in view is the attainment of the least possible amount of unsprung weight. When this ideal is attained, the consequent protection of the major portion of the mechanism from road shocks and vibration will permit the maintenance of higher speeds with safety and comfort.

OCCASIONAL COMMENTS

Lest We Forget.

AT the moment the keen interest lately shown in the matter of riding comfort is declining. *The Motor Cycle* campaign in favour of spring frames led to varied results. On the one hand, it bore fruit in a crop of fully sprung frames, some of which were decidedly excellent. On the other hand, various designers, who could not or would not evolve a first-class spring frame, circumvented the problem quite admirably by adopting much larger tyres, and by minor alterations in their fork or frame design. At present the comfort question is temporarily in a condition of stalemate. Little, if any, public emphasis is being laid on the matter. Some makers have dismissed spring frames from their minds. Others, after coquetting with big tyres, have relapsed to the bad old bone-shaker layouts, possibly because of increased costs and a tight market, possibly because their experiments were conducted with a flabby-sided tyre which rolled. But I hereby warn a section of the trade that there still are machines on the market which a large and increasing section of the public will never ride again, because they are notoriously less comfortable than certain better-designed rivals. If a sales manager finds that his market is shrinking in spite of live agents, good publicity, and ample competition successes, let him ask himself whether his 'bus is up-to-date in respect of comfort.

The Ray of a Sparklight.

ONE or two correspondents have asked me privately how much illumination is furnished by the smaller and cheaper electric lighting sets. It thus occurred to me to measure the ray of my B.T.H. Sparklight set on a pitch dark night. As readers will be aware, its illumination is obtained from a four-volt battery, which is charged by current obtained through a pick-up brush off the "idle maximum" of the magneto. In delivery adjustment its head lamp throws a duplex ray. There is a short-distance diffused circle of comparatively faint light, which is 30ft. in diameter at a distance of 15ft. ahead of the lamp, and suffices to give one a general idea of the immediate foreground. Penetrating distinctly through the centre of this faint circle is a long distance beam of much more concentrated and intense light, by which I can

By Ixion

read a newspaper when standing at a distance of 85ft. from the lamp. Beyond that point the bright, narrow beam extends in a weaker form, which could only be measured with special instruments.

In other words, this inexpensive outfit allows one a distance of about thirty yards in which to pull up after sighting an obstacle, besides supplying comfortable information about the foreground. Presumably a battery of similar voltage, feeding as good a lamp, would give exactly the same light at even lower cost, and would be worth

consideration where special facilities for recharging exist. The Sparklight is certainly adequate for use on the baby two-stroke on which I use it.

The Innocents Abroad.

THE big trials are intended to give the public an index to the reliability of motor cycles. They fulfil their purpose. But only the inside observer knows with what egregious folly some of the manufacturing firms "let down" the plucky fellows who ride for them. Competition riding is a game which wants quite as much knowing as league football or international cricket or growing prize leek or washing a canary for exhibition (I am credibly informed that the last named job is the trickiest in the whole gamut of competitions; you do it with egg flip, and when it is over the bird generally dies of pneumonia or looks like a top hat which has been brushed the wrong way). However, to our muttons. What is the use of paying a handsome salary to a crack competition expert, and then ignoring all his recommendations? There are a lot of new men in the sales departments of the motor cycle industry. Some of them fancied in 1919 that selling motor cycles was as easy as handing round cigars at Show time. They know better now, and most of them are beginning to regard competitions seriously. But some of them have still to learn that success in competition means engaging a man who knows the game, and paying close attention to what he says.

Some Object Lessons.

FOR example, would W. H. Wells ever allow the Indian team to ride wafery 650 x 65 mm. back tyres in a big road trial? (Some British 7-9 h.j. machines do so.) What do you think of enterin

Occasional Comments.—

sidecarettes in a trial which is notorious for smashing up frames, and has led to the redesigning of every big combination which ever competed in it? What is the sense of entering two-speed gears of very low ratio in an event renowned for its eternal hills and prolonged stretches of "doorstep" road, in which most failures are due to blinding necessarily indulged in to recover inevitable losses of time?.. Or, if you were pitting an expenditure of, say, £150 on trying to get an advertisement in a trial which few solo machines have yet completed without at least one tumble, would you mount the magneto in much the same position as a footrest? Or, again, if wild weather and watersplashes were impending, is it fair to send your men out with naked carburetters near the front wheel? For success in the competition game, you must employ an expert and *trust* him.

Multi-wheelers in Trials.

WHAT is the proper position of sidecars, cycle cars, and light cars in a mixed trial? The A.C.U. and M.C.C. generally station them at the tail of the procession, where their dust-raising and baulking proclivities cause the minimum degree of annoyance to the solo mounts. The Edinburgh

M.C.C. attracted a little gentle criticism in last week's Six Day event, by sandwiching all four types of entry together, and providing a three-minute interval after each light car. In narrow lanes, up corkscrew freak hills, and in dry, dusty weather, no motor cyclist wishes to have any kind of multi-wheeler anywhere in front of him. If the passenger entries are lumped together at the tail of the procession, they suffer no hardship—unless the chance to lie in bed half-an-hour longer every morning be a hardship: but if the passenger men dislike being forced to ride in a bunch, they ought to agitate for a trial all to themselves, with lengthy starting intervals. We may love them intensely as individuals; but when they begin prancing among us on a hill like Porlock (in rain) or Park Rash or Summer Lodge, we wish them somewhere. And even more heartily do we detest them when six of them are scorching home along the level with an inch of white floury dust on the top of the road.

Tyre Confidence.

I HAVE never done 100 m.p.h. on a motor bicycle. I do not think I have ever done 80 m.p.h. on less than four wheels. I have no wish to touch either of these speeds. Once upon a day I burst my front tyre when I was doing a measly 65 m.p.h.—and only a speedometer 65 at that. I still feel minute beads of moisture bedewing my spine when I recall the occurrence. But when I read of Le Vack doing 106 m.p.h., I feel all warm inside to think of the sublime confidence he must repose in his tyre maker. Myself, I am a bit of a fatalist about tyres. In ordinary work I have grown to regard their freedom from puncture as something of a lottery. If I had to circle Brooklands on an eight-valved 1,000 c.c., I should probably fit solid tyres and Houdaille absorbers, being a coward to my marrows. The firms whose tyres are selected deserve much credit.

BURNING COUNTRYSIDE.

The terrific heat of last week-end has resulted in the destruction of many beautiful expanses of gorse and heather. Where there were masses of purple and golden bloom are now in many cases desolate stretches of blackened vegetation. The illustration on the left depicts a competitor passing burning vegetation during a trial organised by Messrs. Pike and Co., of Exeter. The great column of smoke shown in the illustration on the right arises from the blazing Oxshott Common on the Portsmouth road between Esher and Cobham.

Inside or Outside Flywheels?

A Discussion on Built-up Crankshafts and Splash Lubrication.

By F. Strickland, M.I.A.E.

TWO features of the ordinary motor cycle which have been more adversely criticised than almost any others are the built-up crankshafts and the splash lubrication, yet these are still almost universal after some twenty years' experience. Writers on motor cycles have demonstrated that the built-up crankshaft is quite wrong, and the inside flywheels still more wrong. One writer has stated that "built-up shafts are never used in any other type of prime mover"—a statement which only shows that he is quite ignorant of modern practice in stationary, marine, and locomotive engines. We are told that the drag of the oil on the flywheels absorbs an enormous proportion of the power of the engine, etc., and that with splash lubrication none of the oil ever gets to the parts which require it, while other writers say that, when a fresh charge is put in, the bearings are "overflowed," though it is not quite clear how a bearing is damaged by having more oil than necessary.

After Twenty Years' Test.

Most motor cycle makers—English, American, and European—use the inside flywheels and splash lubrication adopted by De Dion twenty years ago. So it seems worth while to investigate and see whether, after all, there are not some advantages in the "despised" system.

The first point is to take the actual results. Here we may for a moment go back to the days when single-cylinder engines were used for cars, and see how the bearings compare with the modern types which have forged shafts and pump lubrication.

One of the most successful of the older types of car engine was the 8 h.p. De Dion with one cylinder (100 x 120 mm.). This engine was used for four-seated

cars, and would take four people on occasion over twenty miles in an hour, the car with passengers weighing well over a ton. The big end bearing was under 1 in. diameter and 1 in. long, the bearing surface therefore being about a square inch. These big ends would run 10,000 miles or more with no material wear. Lubrication was by simple splash with hand pump.

Comparisons.

I do not think that anyone will suggest that engines with as small bearings as this on forged shafts have ever done the same amount of work. The total area is about equal to that of many of the flat twin $2\frac{3}{4}$ h.p. cycle engines, and I think it will be generally admitted that to put one of these shafts into an engine capable of taking a ton twenty miles an hour would be asking for trouble, and lots of it. Further, car engines with forged shafts have far larger bearings than this, and yet the bearings require adjustment fairly frequently—in fact, many are not so very much more durable than the old De Dion. These De Dion engines also ran at a very high speed, probably in practice faster than the large majority of modern engines, as the cars had about $6\frac{1}{2}$ to 1 top gear ratios.

I think, therefore, we may take it that the built-up shaft has been very successful even where it has come into competition with the forged shaft on its own ground in cars. Of course, it went out with the

general introduction of the four-cylinder engine, for directly the cylinders are multiplied the great advantages of the built-up shaft disappear, as we shall see, and the construction becomes very difficult.

Assuming that the built-up shaft is satisfactory, why is it?

I think anyone who studies the action of the petrol engine will

Piston, connecting rod, and flywheels of a modern inside flywheel engine. Observe the lead-loaded balance weights.

Inside or Outside Flywheels?—

see that there are very great practical advantages in having the crank pin directly attached to the flywheels. The ordinary single-cylinder engine is driven by a series of impulses with a compression stroke in between. That is to say that the piston drives the flywheel and the flywheel the piston alternately. Now, if the flywheel is outside, these forces have to be transmitted through the crankshaft, and there is therefore a heavy twisting and bending stress on the shaft both on the explosion and to a less extent on the compression stroke, while the inertia of the piston causes stresses on the two idle strokes (fig. 1). On the other hand, with the inside wheels the pressure goes direct from the flywheel to the crank pin and *vice versa*. Further, as the flywheels are usually on both sides of the pin there is no material bending moment at all (fig. 2). All shafts subject to bending spring more or less unless very heavy, and if the shaft springs in the least the wear is greatly increased, as the brass does not bear properly the whole length of the journal. For this reason we might expect that the forged shaft would have to be a great deal heavier than the pin of the built-up one, and this appears to be the case.

Fig. 1.—(A) Flywheel. (B) Connecting rod. On every stroke a twisting stress is put on the shaft at C.

Advantage of Symmetrical Construction.

Even if the forged shaft is made heavy enough to wear as well as the built-up one, it appears better in practice to have the flywheels as near the pin as possible, and it should give a sweeter-running engine. It should also be an advantage for sweet running to have the engine symmetrical, *i.e.*, to have two flywheels, one on each side of the centre line of the engine. This is usual with the inside flywheels, but is not easy to arrange with the outside ones.

Fig. 2.—(B) Connecting rod. Forces are transmitted direct from crank pin to the flywheels.

With the built-up shaft this is absolutely easy, but with the forged shaft it is not so easy to do it and be absolutely certain of uniform hardening. In fact it is so difficult that when we come to the four-throw crank of a car engine it is very unusual to harden them at all.

From what has been said about the alternating drive

between the piston and the flywheel it will easily be realised that when the flywheel is outside, as in the case of the forged shaft, there will be an alternating drive on the key of the flywheel. In car practice the trouble with such flywheels working loose has caused the cone and key fastening to be almost entirely given up, and the flywheels are now almost always fastened on by a flange and bolts. In a motor cycle this would prevent ball bearings or unsplit bushes being used for the main bearings, and they would have to be split as in cars, and there is little doubt of the advantages of the unsplit bearing—a point again in favour of the built-up shaft, as the big end can be an unsplit bush. According to my experience, unsplit bushes wear better than split bearings of the same size, probably because they are more rigid, and it is generally cheaper to put in a new bush than to let together a split bearing and make a proper job of scraping it up. It is for these reasons that unsplit bushes are becoming increasingly popular in such engineering as locomotive work.

Splash Lubrication.

With regard to the splash lubrication, this has at all events the merit of simplicity, and it is not dependent on any mechanical device for action. Further, it can be varied at will to suit the conditions of running. These are distinct advantages, and it needs some definite shortcomings to be shown for its condemnation. Now I take it that the test of a lubrication system is simply whether it lubricates, and although we hear a great deal of the "complete failure" of the splash to do this, we do not get so many instances of actual failure, provided, of course, it has been properly used.

Fig. 3.—If there are large cups over the main bearings arranged so as to catch the oil thrown off the flywheels the bulk of the oil will always be in them, and the only difference between much and little oil in the crank case will be the oil level in the cups.

On the contrary, it appears to me that when one takes a well-designed splash lubrication engine to pieces, all parts appear to have been amply lubricated. Even in the very early days of the car industry this was the case, as was shown by the success of the motor cycle type of engine on cars.

Amount of Oil Needed.

The fact appears to be that when the engine is running at anything like the speed usual on a motor cycle engine, the whole crank case is full of a fine spray of oil. Let us remember that it only takes a few drops of oil a minute to lubricate a bearing, and anyone will see that no big end can go round in such a spray of oil without the oilholes meeting all the oil the bearing requires. Further, it will not make a very serious difference whether the spray is a thick spray or a thin one within fairly wide limits. The bearing will get enough oil, and any excess will run out at the end, as it does with forced lubrication. The main bearings can be provided with cups to catch the oil

Inside or Outside Flywheels?

running down the sides of the crank case, and unless the engine is absolutely starved, these cups will always be full, thereby giving the bearing oil under a uniform head. If these cups are large the bulk of the oil will always be in them (see fig. 3).

The only objection to the splash lubrication with hand pump feed appears, therefore, to be that the piston will get rather more oil at some times than others. This does not appear so very serious.

Not for Universal Application.

On the whole, therefore, the splash lubrication hardly deserves all the abuse it has had.

There remains one point, namely, the alleged drag of the oil on the flywheels. If this were of serious importance it is evident that no machine with inside flywheels could ever win a race or make a record.

Fig. 4.—The built-up crank, inside flywheels, and connecting rod.

As inside flywheels have a fair share of success in such things it is evident that any drag is negligible. With the coming of the four-cylinder engine or even the flat twin it is probable that the built-up shaft will disappear, as it has done in the car. It is evident that its main advantage, namely, having the whole of the flywheel weight directly connected to the crank pin, disappears, as there are four crank pins, and the whole of the weight could not, therefore, be attached to the pin of the cylinder which was firing. Further, the torque from the front cylinders has to be transmitted through the

back crank pins, so that we get alternating stresses on the keys in the shafts, and this appears to be a thing to avoid.

So with the multi-cylinder the built-up shaft will disappear, no doubt.

With regard to splash lubrication, good as it has been when well carried out, probably we shall come to

something more automatic. If pump lubrication is to be satisfactory, however, it must be very well carried out. Some writers assume that there is never any trouble with the bearings or lubrication on cars and lorries, but this is not so, and there has been quite a lot of trouble through the circulating system failing. No doubt a perfect system can be made, but the space in a motor cycle is very much more cramped than in a car, and it will therefore have to be very well worked out. To those who think that plain splash is quite obsolete on four-wheeled vehicles, it may be news that one make of lorry largely used in France had plain splash with no forced feed or troughs. Further, that this lorry was probably the greatest favourite for hard work of any make out there.

Fig. 5.—Crankshaft and connecting rod of an outside flywheel engine.

No Sudden Failures with Splash.

It must be remembered that while splash lubrication fails slowly, any circulating system fails without warning. That is to say, that with splash lubrication, if one forgets to put oil in, or if one's supply pump fails, the engine runs harder for some time before serious damage is done and attention is called. With a circulating system the first warning one usually has of anything being wrong is a bearing seized or run out.

It must not be thought that I wish to imply that all engines with forged shafts are bad, or that no system but splash is successful for lubrication. I am quite aware that most excellent engines are made with outside flywheels, etc., as well as inside. All I wish to do is to point out some technical reasons which, in my opinion, show that the balance of advantages is still with the inside flywheel and splash lubrication, as used by the large majority of makers of singles and V twins.

THE SIMPLE SOLO SINGLE.

IN pre-war days, when a young man bought a motor cycle, he probably selected a $3\frac{1}{2}$ h.p. T.T. single. On this he could—and did—go anywhere, was as fast as anything on the road, and his petrol consumption was anything in the neighbourhood of 100 m.p.g.

In these degenerate times, when a young man's fancy turns to motor bicycles, he purchases a baby two-stroke, burdened with countershaft gears, a clutch, and kick-starter.

The writer intends no slight to two-strokes—from it. They are fascinating little machines to drive, and are very capable of serious work if one is not in a great hurry. But they are not machines for "young blood."

It is the opinion of many enthusiasts that the high efficiency $3\frac{1}{2}$ h.p. single—fixed gear with direct belt drive—is the finest type of motor cycle obtainable.

It is simple, reliable, economical, exceedingly fast, and weighs considerably less than many so-called "lightweights."

One can never learn the fine points of driving from the saddle of a geared lightweight. The rule amongst many motor cyclists would appear to be—"When in doubt, change down." Traffic calls for no intelligence other than the ability to steer sufficiently well to avoid pedestrians. Hills now demand no skill.

The boy on his $3\frac{1}{2}$ T.T. packs up his toothbrush and cigarettes on a Saturday afternoon, and starts out for a 250 mile week-end trip. There is no doubt about his getting there—his bicycle is so simple that there is practically nothing to go wrong. He may puncture, certainly, but who does not? A broken belt may detain him for five minutes, but otherwise an enforced stoppage is most unlikely.

P.S.

UNITY OF CONTROL.

Unification of Motoring Bodies. Possibilities of an Amalgamation of R.A.C., A.C.U., A.A., and the Scottish and Irish Organisations.

I WOULD submit that there is every reason for an early unification of effort and of actual amalgamation of motoring bodies—R.A.C., A.A., Scotch and Irish, and that the financial position of the A.A. need not prejudice the issue. There is ample work to keep such an amalgamation going and to provide scope for present officials. Overlapping of effort would cease, resulting in enormous economies, sections with well-defined duties would work efficiently for the movement, and united effort on the roads, in the cities and towns, and in the House of Commons, would do incalculable good for the cause of automobilism. The A.A., with its healthy balance sheet (amalgamation need not of necessity rob it of a copper) and its very excellent road organisation, would improve and expand that organisation and be helpful to all road users. The R.A.C. would foster the social and the sporting side, perhaps reserving its Pall Mall premises to its club members, and, in the course of time, it might open country clubs for touring motorists. The A.C.U., with its motor cycle membership, would conduct the affairs of all motor cyclists in the region of sport, leaving the R.A.C. to provide its members with certain benefits, and the A.A. to wave them along the roads and help them when touring this and other countries.

"Unity of control—the lesson of the Great War is urgently needed in the cause of automobilism. . . . The motor industry requires the immediate and serious attention of a single influential body, representing the interests of motorists as a whole."

The above is an extract from an article which appeared in "The Autocar" in February 1919. "The Motor Cycle," also has urged the necessity for united action.

Lack of unity among the various motoring organisations, allowed the present taxation scheme to be foisted upon motorists.

Following recent comments on the subject by "Owen John" in "The Autocar" in last week's issue of our sister journal, Lt-Col. F. S. Brereton, C.B.E., Chairman of the Auto Cycle Union, discussed the position and possibilities of an amalgamation between the R.A.C. (the parent body of the A.C.U.), and the A.A., from which article the extracts given here have been culled.

Why should some such scheme conflict with financial or personal interests? Compare it with the present position. Smith is a member of the A.A., Jones a worthy supporter of the R.A.C. They motor together. They are the best of friends. They suffer from the same vexatious taxation and restrictions. In short, their aims and their views coincide. But their respective motoring organisations are at variance. Their staffs do not fraternise, they are in acute competition with each other. There is no attempt at co-operation, no combination of effort is possible, there is gross overlapping, and Smith and Jones and thousands of others who supply the golden eggs on which the respective staffs batten, sigh, and suffer and give up the task, which is rendered hopeless for the time being by—"Owen John" surmises—that personal element which can be alike the making and the absolute breaking of any movement.

If "Owen John" be right in his surmise, one asks: Brother motorists, why submit to such a position? Why not shake off an element so essentially selfish, and seek, by free discussion in open committee, for a means of unity or amalgamation which shall benefit all our community. Why not, in short, accept the position that the interests of members of the various organisations come first, and that the vested interests of officials must give way before them?

F. S. BRERETON.

ON THE FOURTH DAY OF THE SCOTTISH TRIALS.

Outside the check at Dalnacardock: The riders, from left to right are:—J. W. Morton (3½ Rover), M. T. Calderon (2½ Velocette), R. T. Ball (3½ Scott), A. G. Cocks (Beardmore-Precision), Norman Black (5-6 Omega), W. A. Davenport (5-7 Coventry Victor), and W. F. Scott (3½ Scott).

A SINGLE SLEEVE VALVE ENGINE.

Speed, Silence, and Accessibility combined in the New Barr and Stroud 350 c.c. Motor Cycle Power Unit.

SINCE the introduction of the sleeve valve engine in the automobile world, there have been various attempts to adapt this form of silent valve operation for motor cycle work. Most of these efforts have proved fruitless, though the lure of the mechanically silent engine is strong.

Amongst certain conservative motor cyclists there is some amount of prejudice against sleeve valves, probably owing to their comparative novelty; but the fact must be borne in mind that some of the highest class automobiles in the world are fitted with sleeve valve engines. Such names, for instance, as Panhard, Piccard-Pictet, Daimler, Minerva, Mercedes, Argyll, and Willys-Knight have served to prove the reliability of sleeves, both for touring and racing purposes. It may be remembered that the team prize in the 1914 Tourist Trophy car races was obtained by sleeve valve engined Minervas, which finished second, third, and fifth; while some twenty-three long-distance Brooklands records still stand to the credit of the single sleeve Argyll car.

A Tried System.

This last fact has a special bearing on the matter in hand, for the record-breaking Argyll and the new Barr and Stroud motor cycle engine are both manufactured under Burt patents, and the motion of the single sleeve is similar in each case.

As long ago as November, 1919, we were able to give details of an experimental engine produced by Messrs. Barr and Stroud, of Anniesland, Glasgow, and since that time the firm has been active in perfecting the design and modifying details for production purposes.

Two views of the complete B. and S. engine; the absence of external valve gear is particularly noticeable, and the clean lines obtained by combining the cylinder in the top half of the crank case, are also apparent.

The 350 c.c. B. and S. engine with oil base and cylinder head removed. On the left will be seen the ribbed aluminium base, and on the right the sunk cylinder head with single piston ring. Crankshaft, piston, and connecting rod may be removed from the machine through the base without detaching the engine from the frame.

The first production engines have now been completed, and have undergone prolonged road and bench tests, and towards the end of the year a limited supply should be available. Messrs. Barr and

other precision instruments, are accustomed to manufacturing to extraordinarily fine limits, and from our own observation we may say that the workmanship of the new B. and S. engine is superb.

Section of the B. & S. cylinder, showing the arrangement of ports and gas passages.

Stroud, however, do not intend to market their new production until they have ample stocks, though it is intended that large numbers shall be produced in 1922.

Before proceeding to describe the engine, it should be explained that the manufacturers, whose name is well known as makers of range finders, fire control mechanism,

Valve Operation Described.

Though retaining the principle of the single oscillating and reciprocating sleeve, the engine has been modified from its original form to a very considerable degree. The main dimensions are 70 mm. bore and 90.5 mm. stroke (349 c.c.), and the iron cylinder barrel is cast in one piece with the top half of the crank case. Within the barrel lies a semi-steel sleeve about $\frac{3}{16}$ in. in thickness, the base of the sleeve being stiffened up and carrying a pin, at right angles to its axis, through which the motion is conveyed. It may be remembered that in the early engines the sleeve was given a combined vertical and semi-rotary motion by means of a crank and link. This operating gear has now been superseded by a clever adaptation of a Skefko self-aligning ball race set eccentrically (and at an angle) in the half speed operating wheel. The pin carried on the base of the sleeve engages in the inner race of

The single sleeve valve of the B. and S. engine, to which a reciprocating and oscillating motion is imparted by means of a pin engaging with a Skefko ball race set eccentrically in the half-time pinion.

A Single Sleeve Valve Engine.—

this ball bearing, and is a sliding fit therein. Thus when the half time wheel is rotated the sleeve is raised or lowered, and at the same time rotated through a considerable number of degrees, the self-aligning ball race adapting itself to the necessary positions. It will be seen that any point on the sleeve follows an elliptical path. A stroke of only 1.4in. is given to the sleeve, and the necessary balance weight is incorporated with the half time gear wheel.

The crankshaft is supported in ball bearings, which are held up to the top half of the crank case in suitable steel housings.

Five ports of a form calculated to provide the greatest possible area are cut in the top of the sleeve, two acting as exhaust ports, two as inlet, and one as both inlet and exhaust, since the rotary motion of the sleeve causes it to register with an inlet port on one stroke, and an exhaust port on the other.

Simple Head Construction.

Six corresponding ports are formed in the cylinder—three inlet and three exhaust. Sunk inside the sleeve is the cylinder head proper, which carries a single ring at its lower extremity as an additional gas seal, and also the spark-

A waisted piston, having two top rings and one scraper ring, is connected to the crankshaft by an H-section connecting rod having a single row roller big end.

A light sporting machine in which a new B. and S. engine has been undergoing road tests.

ing plug and release valve. Exhaust and inlet gas passages are cast with the cylinder, so that a single external pipe is all that is necessary in each case.

A light cast iron piston of the Zephyr type, having two rings at the top and an oil scraper in the skirt, is used, the hollow gudgeon pin floating in the piston

After threading the connecting rod over the crankshaft, the rollers are located endwise by means of split bronze thrust washers held together by steel rings. The balance weights are attached after assembly.

bosses and being fixed in the small end of the H-section connecting rod. A single row roller big end is employed, the connecting rod being threaded over the solid crankshaft, and located sideways by split bronze thrust washers held in place by steel rings.

Arrangement of sparking plug, and release valve. A somewhat modified form of piston is now in use.

Balance weights are attached after the bearing has been assembled, and are permanently fixed in position.

Both sides of the crank are carried in large ball bearings, and these bearings are held up to the four foundation bolts by steel carrier rings; a ribbed aluminium oil base covers the mechanism.

The sleeve operating half-time wheel has wide fine pitch teeth, and is driven directly from the crankshaft, and the magneto, which may be carried either in front or at the rear, is driven through a train of gears.

Easy to Dismantle.

Great accessibility is a feature of the engine. By removing the oil base and four nuts, the whole piston, connecting rod, and crank assembly may be removed for examination without detaching the engine from the frame, while by removing three screws the magneto and distribution gears may be detached complete, and the sleeve lowered through the base.

On the bench the engine has given most satisfactory results, and the standard article produces over 6 h.p. at 3,000 r.p.m. This figure is by no means

Sectional elevation of the engine. Note the sleeve operating gear, which runs on ball bearings throughout.

A Single Sleeve Valve Engine.—

the limit, as the power curve continues to rise steadily to well over 4,000 r.p.m., and special engines with high compression and light reciprocating parts have given a maximum power of approximately double that already stated.

After a thorough examination of all parts, we were offered a trial run on a light machine fitted with the standard engine and an all-chain drive Sturmey-Archer two-speed gear. Accompanied by Capt. Barr on another machine fitted with a brand new engine, we set out, having been warned that our mount was capable of a mile a minute under favourable circumstances.

The first noticeable feature was the entire absence of noise from the engine, with the exception of the exhaust. The distribution gear is inaudible from the saddle. There is not even a click to be

heard from any other part of the power unit. A hum from the transmission chains and gears is noticeable, but not unpleasant. Next comes flexibility and top gear climbing, and it was found that the engine could hold a top gear of 5 to 1 on quite considerable hills even when these were approached at a crawl. And finally, where road conditions were favourable, we were able to try maximum speed. Unfortunately, no speed indicator was fitted, but we may safely assert that the new B. and S. is one of the fastest standard 350 c.c. engines which we have had the opportunity of riding. The engine was consistently smooth and silent in operation at all road speeds except the very lowest, when a slight vibration from the sleeve was noticeable; this fault, however, has already been corrected by a modification in the sleeve balance weights.

We were particularly impressed by the performance of the B. and S. engine, and, though from our preliminary examination, we were inclined to expect symptoms of overheating from the recessed cylinder head, we were entirely unable to extract a "knock" from the engine under the most trying circumstances. We are informed that the normal petrol consumption exceeds 100 m.p.g., and we were able to prove to our own satisfaction that the oil consumption is certainly not in excess of the normal.

In conclusion, the opinion of the new Barr and Stroud engine is that it is an extremely high-class production which is likely to carve out for itself a big future on account of its undoubted merits of silence, power, accessibility, and smooth running; it is adaptable to most standard lightweight frames.

NEARLY 90 M.P.H. ON SALT BURN SANDS.

Well-known T.T. Riders win "Yorkshire Speed Championship" Cups

SEVERAL thousand spectators witnessed the Saltburn speed trials promoted by the Middlesbrough and District Motor Club, under the auspices of the Yorkshire Centre A.C.U., which were held in ideal weather on a beach course two miles in circumference.

A feature of the event was that three Yorkshire championships had to be decided, and quite a number of T.T. riders were entered. In the twenty-mile championship for machines up to 350 c.c. the challenge cup went to Hugh Mason on a $2\frac{3}{4}$ h.p. N.U.T.; for machines up to 600 c.c. J. Whalley, of Lancaster, riding a $3\frac{1}{2}$ h.p. Sunbeam, secured the trophy; whilst F. W. Dixon, the Middlesbrough expert, on a 7-9 h.p. Harley-Davidson, captured the 1,000 c.c. cup, and also carried off the trophy presented by Mr. John Gyers, president of the Middlesbrough Motor Club, for the fastest time of the day, Dixon's record in the flying kilo 1,000 c.c. event being 89.48 m.p.h.

The crowd was naturally delighted at the success of the local man, who scored the chief honours in every race he entered.

TRADERS' FOUR MILE RACE (for two-strokes up to 300 c.c.).—1, S. Jones ($2\frac{1}{4}$ Velocette), 6m. 28½s.; 2, L. A. Runtun ($2\frac{1}{4}$ Velocette), 7m. 8s. *Experts barred:* 1, L. A. Runtun ($2\frac{1}{4}$ Velocette), 7m. 58s.

TRADERS' FOUR MILE RACE (for sidecars up to 350 c.c.).—G. S. Boston ($2\frac{1}{4}$ A.J.S. sc.), 7m. 26½s.

TRADERS' FOUR MILE RACE (for sidecars up to 1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson sc.), 6m. 5s.; 2, A. Ducbars (7-9 Harley-Davidson sc.), 7m. 2s.

TRADERS' FLYING KILO RACE (up to 250 c.c.).—1, S. A. Marks ($2\frac{1}{4}$ Diamond), 63.91 m.p.h.; 2, S. Jones ($2\frac{1}{4}$ Velocette), 53.77 m.p.h.; 3, T. Barrett ($2\frac{1}{4}$ Lewis), 47.80 m.p.h. *Experts barred:* 1, L. A. Runtun ($2\frac{1}{4}$ Velocette), 42.37 m.p.h.

TRADERS' FLYING KILO RACE (up to 350 c.c.).—1, G. S. Boston ($2\frac{1}{4}$ A.J.S.), 65.79 m.p.h.; 2, J. Jobborn ($2\frac{3}{4}$ Sunbeam), 63.91 m.p.h.; 3, H. Mason ($2\frac{3}{4}$ N.U.T.), 58.56 m.p.h. *Experts barred:* 1, J. Jobborn ($2\frac{3}{4}$ Sunbeam), 63.55 m.p.h.; 2, B. B. Bointon ($2\frac{3}{4}$ Coulson-B), 55.92 m.p.h.; 3, E. B. Young ($2\frac{3}{4}$ Verus), 49.71 m.p.h.

TRADERS' FLYING KILO RACE (up to 600 c.c.).—1, R. T. Cawthorn ($3\frac{1}{2}$ Norton), 79.32 m.p.h.; 2, C. P. Wood ($3\frac{1}{2}$ Scott), 74.57 m.p.h.; 3, H. Mason ($3\frac{1}{2}$ N.U.T.), 74.07 m.p.h. *Experts barred:* 1, J. Whalley ($3\frac{1}{2}$ Sunbeam), 69.47 m.p.h.; 2, C. N. Sadler ($3\frac{1}{2}$ Norton), 68.20 m.p.h., and G. Bethwaite ($3\frac{1}{2}$ Norton), 68.20 m.p.h., tied.

TRADERS' FLYING KILO RACE (1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson), 89.48 m.p.h.; 2, R. T. Cawthorn ($3\frac{1}{2}$ Norton), 81.05 m.p.h.; 3, T. W. Denny (—), 80.47 m.p.h. *Experts barred:* 1, C. N. Sadler (7-9 Indian), 74.07 m.p.h.; 2, J. Whalley ($3\frac{1}{2}$ Sunbeam), 68.20 m.p.h.; 3, R. A. Bonner (8 J.A.P.), 62.84 m.p.h.

TWENTY MILE YORKSHIRE CHAMPIONSHIP (350 c.c.).—1, H. Mason ($2\frac{3}{4}$ N.U.T.), 26m. 37½s.; 2, G. W. Shepherd ($2\frac{3}{4}$ Beaumont), 29m. 6½s.; 3, S. Jones ($2\frac{1}{4}$ Velocette); 4, G. S. Boston (A.J.S.).

TWENTY MILE YORKSHIRE CHAMPIONSHIP (600 c.c.).—1, J. Whalley ($3\frac{1}{2}$ Sunbeam), 23m. 46½s.; 2, L. Mitchell ($3\frac{1}{2}$ Norton), 24m. 23½s.; 3, L. Geoffrey ($3\frac{1}{2}$ Scott), 25m. 29½s.

TWENTY MILE YORKSHIRE CHAMPIONSHIP (1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson), 21m. 36½s.; 2, R. A. Bonner (8 J.A.P.), 24m. 15½s.; 3, L. Mitchell ($3\frac{1}{2}$ Norton), 24m. 43½s.

LADIES' TWO MILE RACE.—1, Miss Gibbon ($3\frac{1}{2}$ N.U.T.), 2m. 57½s.; 2, Miss E. Armstrong ($2\frac{1}{4}$ Triumph), 3m. 20½s.; 3, Miss F. E. Dent ($5\frac{1}{4}$ Scott Squirrel), 3m. 56½s.

TRADERS' FOUR MILE RACE (350 c.c.).—1, G. S. Boston ($2\frac{1}{4}$ A.J.S.), 4m. 37½s.; 2, Hugh Mason ($2\frac{3}{4}$ N.U.T.), 5m. 21½s.; 3, S. A. Marks ($2\frac{1}{4}$ Diamond), 5m. 25s. *Experts barred:* 1, J. Jobborn ($2\frac{3}{4}$ Sunbeam), 5m. 20½s.; 2, B. B. Bointon ($2\frac{3}{4}$ Coulson-B); 3, E. B. Young ($2\frac{3}{4}$ Verus).

TRADERS' FOUR MILE RACE (600 c.c.).—1, L. Mitchell ($3\frac{1}{2}$ Norton), 4m. 20½s.; 2, Hugh Mason ($3\frac{1}{2}$ N.U.T.), 4m. 35s.; 3, C. P. Wood ($3\frac{1}{2}$ Scott), 4m. 44s. *Experts barred:* 1, W. Wells ($3\frac{1}{2}$ Sunbeam), 4m. 49½s.; 2, M. Robinson ($3\frac{1}{2}$ Norton), 5m. 4½s.; 3, G. Wallis (4 Triumph), 5m. 18½s.

TRADERS' FOUR MILE RACE (1,000 c.c.).—1, F. W. Dixon (7-9 Harley-Davidson), 4m. 8s.; 2, R. A. Bonner (8 J.A.P.), 4m. 35s. *Experts barred:* 1, J. Whalley ($3\frac{1}{2}$ Sunbeam), 4m. 37½s.; 2, R. A. Bonner (8 J.A.P.), 4m. 37½s.; 3, W. Wells ($3\frac{1}{2}$ Sunbeam), 4m. 53½s.

A lady competitor—Miss Gibbon ($3\frac{1}{2}$ N.U.T.) crossing the tape in the recent Yorkshire Centre A.C.U. Speed Trials on Saltburn sands.

Lightweight Sidecar Records Broken.

Fine Performances by an "Under-size" Two-stroke Machine in the 350 c.c. Class.

A SUCCESSFUL attempt at record-breaking was recently made at Brooklands by J. F. Newey on a $2\frac{1}{2}$ h.p. New Comet and sidecar. The outfit was fitted with a Climax engine, 70×76 mm. (293 c.c.), and it was successful in beating the four hours, six hours, and 250 mile records. The engine is of considerably smaller capacity than the highest limit allowed in Class E1. In the four hours 163 miles 106 yards were covered, the average speed being 40.76 m.p.h.; in the six hours Newey travelled 234 miles 526 yards, the average speed being 39.09 m.p.h.; while the 250 miles were covered in 6h. 34m. 29 $\frac{1}{2}$ s., at an average speed of 38.02 m.p.h. The Climax engine works on the usual three-port principle, but differs from most two-strokes, in that it has inside flywheels.

The following accessories were used: Dunlop tyres, Dunlop belt, Amac carburetter, K.L.G. plug, Brooks saddle, Pratts' petrol, and Renolds chains.

J. F. Newey at speed on a $2\frac{1}{2}$ h.p. New Comet and sidecar, on which he broke the four and six hours Class E1 records at Brooklands.

THE QUESTION OF CLOTHING.

THE abnormal drought experienced in this country during the past two months naturally made everyone take refuge in the lightest of summer clothing; but sooner or later our national weather is bound to return, and motor cyclists will be again faced with the problem of keeping clean and dry so as to appear presentable at the end of a long journey.

A firm which for the past ten years has carefully studied the requirements of motorists in this direction is the Velox

Rubber Co., Ltd., of 12, Jackson's Row, Manchester, which has a very complete range of clothing to suit both motor cyclists and owners of cars.

A Practical Design.

A particularly serviceable outfit is that illustrated and known as the Velox Royal. A double-breasted coat with deep storm collar is provided with a belt and exceptionally large military pockets—a feature that will be much appreciated. The trousers are of the seatless type secured at the top by a waist belt, and having a neat and efficient means of ankle fastening, while the inside of the foot is reinforced with leather.

The suit is made of a superior waterproof material, and, from our examination of a specimen, appears capable of the hardest service. This model is priced at £4 10s.

THE LATE MR. H. G. HAWKER.

THOUGH best known as a pioneer airman, the late Mr. Harry Hawker, who was killed while flying at Hendon last week, was a prominent figure, not only in automobile but in motor cycle circles, and during the last twelve months gave his name to the interesting and successful Hawker two-stroke lightweight made by the company bearing his name, the Hawker Engineering Co., of Kingston.

Neither Mr. Hawker nor his partner Mr. T. O. M. Sopwith can be described as other than active motor cyclists. As soon as their little machine was ready for the market, both partners themselves entered various reliability trials. In the A.C.U. One Day Trial for stock machines, the two Hawkers driven by Mr. Harry Hawker and Mr. T. Sopwith made quite excellent performances; and, had they not run short of lubricating oil at the end of the event, there is no doubt

they would have emerged therefrom with flying colours.

It is sad to think that Hawker's name will be missing from the movement into which he had so recently entered, but his memory will long survive as a daring aviator, whose luck in adversity was little short of proverbial, and it seems indeed hard that, after so many hairbreadth escapes, misfortune should have overtaken him at last.

The Velox Royal—A practical garment for the all-weather motor cyclist.

The late H. G. Hawker with one of the two-stroke motor cycles bearing his name.

TWO-STROKE PISTONS.

Some Considerations influencing the Design of the Deflector on Two-stroke Engine Pistons.

SUN-VITESSE.

LEVIS.

VILLIERS.

VELOCETTE.

CLYNO.

FROM a casual survey of half a dozen pistons, extracted from as many different makes of two-stroke engines, one might be led to imagine that anything with a hump in the middle will work. This in effect is true, and even a flat-topped piston will give results of a kind. On the other hand, deflector design has quite an important effect on the performance of the engine, as some of our readers, who have reversed the piston, have discovered.

Actually, piston design is affected by so many extraneous factors that the variations are easily accounted for. Since the main function of the deflector is to prevent unburned gases from passing out of the exhaust port it is desirable to maintain a high gas speed so as to deflect the transferred charge upwards with some force; but since, also, the volume of gas to be transferred varies with the throttle opening the ideal piston should have a variable baffle. Here we come up against the limits of possibility, and, as so often occurs in engineering practice, a compromise is the result.

Weights and Lengths.

Two-stroke pistons have perforce to be somewhat heavier than four-stroke pistons of the same bore, since their minimum length is governed by that required to seal the ports, added to which is the weight of the high deflector head.

Another feature which helps to increase the weight is bound up with the liability of piston rings to gum up in their grooves. To prevent this rather common fault it is necessary to use a considerable body of metal behind the rings to conduct the heat from the head.

The weight of a standard two-stroke piston of 64 mm. bore is about 14 oz., and that of a similar aluminium piston of 67 mm. bore about 11 1/4 oz., but certain difficulties occur in the use of aluminium pistons for two-stroke engines. For, though it is desirable to reduce clearances to a minimum, the high coefficient of expansion of the latter metal demands rather large cold clearances.

Clearances for Aluminium.

An aluminium piston has given good results in a two-stroke engine with clearances as small as .002 in. per inch of cylinder diameter, but the design of the piston was such that it was at least as heavy as a corresponding cast iron piston, though it retained the main advantage of improved internal cooling.

Owing to the peculiar shapes adopted it has become the usual practice to cast the piston heads and trim them up to suit with a file, but one or two manufacturers, notably the makers of the Cedos, machine the heads all over, and so are in a position to guarantee uniformity, while effecting a considerable saving in production costs.

Distortion is a not uncommon failing with two-stroke pistons owing to the effects of intense heat on unsymmetrical piston heads, and, sometimes, to uneven expansion in the neighbourhood of the gudgeon pin fixing. For this last reason not a few manufacturers have adopted the practice of allowing the gudgeon pin to float in the piston bosses and locating it by a fixture in the connecting rods. The two-stroke Clyno was one of the first in which this method was applied in this country.

ALLON.

NEW HUDSON.

TRIUMPH

Two-stroke Pistons.—

It is not uncommon to find the gases transferred through ports in the piston wall, and this practice reduces the volume below the piston head, and, in some cases, assists in piston cooling. One firm even goes so far as to pass the charge over an internal deflector directly below the piston top, in order to improve the cooling of this vital spot.

RIDING TO SCHEDULE.

How to Make "Repetition" Journeys More Interesting.

THE writer is one of the numerous class of people whose home and business interests are separated by many miles. In his case the distance is forty-eight miles, by road, and cannot be achieved by train in less than $3\frac{1}{2}$ hours, often taking an hour longer. It is obvious that quite an ordinary motor cycle should improve considerably on these times; in fact, it was hoped to reduce the journey time to $1\frac{3}{4}$ hours.

In the scramble of the early days of 1919, the machine which fell to the writer's lot was a $2\frac{3}{4}$ h.p. Allon two-stroke, and the first journey was undertaken with high hopes.

Taking into consideration the condition of the roads in the summer of 1919, and also the fact that the standard $2\frac{3}{4}$ h.p. two-stroke does not shine at prolonged speed work, a 20 m.p.h. schedule was deemed ambitious enough to begin with, the time allowed for the forty-eight miles being 2h. 25m. This proved well within the powers of the machine, and only once was the allotted time exceeded, the cause being a broken throttle wire. The best times recorded were one of 2h. 11m. on the outward, and one of 2h. 17m. on the homeward journey.

Experiences with a Douglas.

In the autumn of 1919 the writer parted with the sturdy little Allon—not without many regrets—and purchased a W.D. pattern $2\frac{3}{4}$ h.p. Douglas. The first run with the new machine was made on a very wet December day, which made one sigh for the excellent mudguarding of the Allon. So bad were the conditions that speed was quite out of the question, and, under the circumstances, the time of 2h. 19m. cannot be regarded as bad.

The fact that this time was usually slightly exceeded must not be taken as reflecting on the machine, which proved to be all that its makers claim for it. But at that time the condition of the roads was very bad. On

So much experimental work is being devoted to two-strokes at the present moment that a study of representative pistons may be of some value. This part will undoubtedly come in for careful consideration, though the most radical changes in the near future are likely to take place in other parts, and may even eliminate the necessity for the baffle.

the first outward journey a loss of fourteen minutes had to be recorded, as rather inconsiderate forcing of a new engine resulted in "drying up" on a hill. The best time in this direction was one of 2h. 3m. In the opposite direction "schedule time" was usually kept, a loss of four minutes on one occasion being the only exception.

When the long-awaited time arrived, and a motor cyclist was able to choose his mount, the machine of the writer's choice was the $3\frac{3}{4}$ h.p. sports model Scott—a choice which he has never had occasion to regret. Most of the outward journeys were made on summer Sunday evenings, so that motor cyclists who have travelled along the Birmingham-Stratford road at such times will not be surprised to learn that the times for the initial eighteen miles to Shakespeare's town were usually rather slow, a loss of five minutes being frequent. But the slowest overall time was only two hours four minutes. Usually the scheduled time was closely adhered to, while on one of the few runs not made on Sunday, a saving of ten minutes was easily effected. In the reverse direction the Scott, as a rule, simply played with the schedule. Incidentally, with this machine I obtained 74 m.p.g. when using benzole and Spots.

Motor cyclists who have to make the same journey frequently might do worse than adopt a regular schedule, as this practice considerably lessens the monotony of a well-known ride. Probably many motor cyclists who read this have long ago adopted a similar practice. The schedule adopted should not be too "tight." Experienced riders know how difficult it is to maintain an average of even 20 m.p.h. over most roads. If roads are good, and no big towns have to be negotiated, there is no reason why a skilful rider should not average 24 m.p.h. with perfect safety to himself and the community. It is a speed which involves easy calculations, as it means an allowance of $2\frac{1}{2}$ mins. per mile.

Where the Bits go to.

A reader discovered a lost valve cotter pin in his silencer.

Records.

More long distance sidecar records have been beaten by a two-stroke. (See page 73.)

Tornapress-Applecross.

This notorious "Pass of the Cattle" has lost most of its terrors. Engines improve year by year, but hills get no steeper.

Light Cars in the "Scottish."

There were fourteen light car entrants in the Scottish Six Days Trials, some of them air-cooled. Details of the trial from a light car owner's point of view appear in *The Autocar* this week.

Next Sunday.

Sunday is the great sports day of the week in France, hence the holding of the Grand Prix on Sunday next. There are fifty-seven entries. On the day following, the great Grand Prix for cars will be run. A description of the latter will appear in *The Autocar*.

Silence.

A mechanically silent motor cycle engine—an engine which has not even the sewing-machine whirr of the quietest twin, or the hum of the best two-strokes—has been produced by a Scottish firm of engineers. It is described elsewhere in this issue.

Motorists and Hospitals.

In response to a suggestion that distinctive signs, similar to those usually issued by the Automobile Association, should be erected informing motorists that they are passing a hospital, the A.A. has provided two signs carrying the injunction "Please do not hoot" for the Great Northern Central Hospital, Holloway.

Power Alcohol.

In reply to a deputation who waited upon him recently in connection with power alcohol, the Chancellor of the Exchequer stated that he saw difficulties in the way of adopting a different scale of preference duties for power alcohol from that applicable to alcohol intended for other purposes. The subject, however, was very complex, and he would consider it further.

The Number of Motor Cycles in France.

According to the latest statistics, there were some 37,761 motor cycles in France in 1914, and at the end of the war (1918) this number fell to 8,394, rising to 28,538 in 1919, and to 50,785 in 1920—the highest number yet recorded.

IMPORTANT NOTICE.

Owing to the August Bank Holiday, the issue of "The Motor Cycle" for August 4th must be closed for press earlier than usual. Insertion of Miscellaneous Advertisements in that issue can only be guaranteed if in our publishers' hands by FIRST POST, Thursday, July 28th.

Special Features

THE SCOTTISH TRIALS DESCRIBED
A SLEEVE-VALVE ENGINE.

The Little Giants.

The "baby" two-strokes did remarkably well in last week's Scottish Trials.

A Midland Rally.

There is to be a motor cyclists' rally at Stratford-on-Avon on Saturday next.

Thirty-eight Guineas.

We are getting down to popular figures! A well-known lightweight now sells at thirty-eight guineas.

Belt Drive.

Belt drive still has its many supporters. At least, one would judge so from our correspondence columns.

THE SCOTTISH SIX DAYS TRIALS.

A group of competitors on the route near Achnasheen between Strathpeffer and Jeantown.

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

PETROL TINS ON SIDECARS.

Sir,—With reference to the letter of Mr. R. C. Measures on "Petrol Tins on Sidecars," I have experienced the same trouble on a Triumph. I overcame the difficulty by fixing the ordinary petrol tin to the carrier of my machine by means of clips somewhat similar to the way in which a petrol can is fastened to the running board of a car.

The clips were made by a blacksmith, only cost a few pence, and have given no trouble during six thousand miles on the road.

E. BRIDGFORD.

Sir,—Referring to R. C. Measures's letter *re* petrol tins on sidecars, I never could see the necessity of carrying two gallons of spare petrol on a sidecar.

My method is to obtain an empty half gallon tin of lubricating oil, cleanse with a little petrol, cut two nicks in the stopper and cut a leather disc as on a petrol tin. This can then be screwed down quite leak tight. I place this in the sidecar just in front of the seat, and when the supply in the tank gives out I am all right for at least another twenty miles. As a matter of fact I have often helped fellow motorists by letting them have the contents of my spare half gallon tin.

Of course he could have a spare gallon in the same manner and enamel the tin in any colour.

FREDK. TAYLOR.

WHERE THE BITS GO.

Sir,—The following may interest your readers. I have a J.A.P. engine with overhead automatic inlet valves. A month ago, during a journey of some thirty miles, one of the inlet valve stems broke. I found the valve, spring, and broken bit of valve stem, but the cotter pin was missing. This worried me considerably, as I thought it might be in the cylinder. However, I slipped a washer on the valve stem, and riveted it well over; this took the place of a spring stop, and proved satisfactory. A few days ago I dismantled the silencer, and out fell the cotter pin.

R. B. MONTGOMERY SWAN.

MOTOR COACHES.

Sir,—Is it not time that some agitation should be started to force chars-à-bancs and other heavy traffic to have a man stationed in the rear of the vehicle, with a signal bell to the driver? It is impossible for any horn usually found on a motor cycle, or even on most cars, to attract attention through the din.

Travelling between Brighton and Lewes on a recent Sunday evening, I was overtaking a motor coach going uphill. After booting vainly for some minutes to get the driver to take the left side of the road and give decent room to pass, and craning my neck round to watch for a suitable opening, I at length decided to pass. The motor coach kept the middle of the road, and there was only just room for me, and as the driver was going at a good speed it took quite an appreciable time to get clear. Just as I got level with the front wheels, a sidecar machine coming fast down the hill appeared round a slight bend some way ahead. There was no time to drop back and get behind, so my only course was to dash ahead and make a dangerous crossing between the motor coach and the approaching sidecar.

Had the motor coach drawn off to the left to let me pass, I should have been able to see far enough ahead to pick

the right time. As it was, if there had been an accident, I should have been in the wrong in the eye of the law, although the fault really lay with the motor coach driver.

This sort of thing is of constant occurrence, and one can never feel safe in overtaking such vehicles. They sway about all over the road, and you never know if the driver has seen you or not, and, even if he has, you never get more than bare room to pass. Having such little room, it is dangerous to rush the passage, and, if you do not, approaching traffic may be on you before you can get clear. Traction engines with trucks behind carry a look-out, so why should not the faster and more dangerous char-à-banc?

WILFRID M. BEAR.

[It has long been advocated by *The Motor Cycle* and its sister journals, *The Autocar* and *Motor Transport*, that motor coaches and heavy transport vehicles carry mirrors, and, sooner or later, these efforts must bear fruit with the Government.—Ed.]

THE T.T. RACES.

Sir,—As a keen follower of the sport on paper, I was much interested in this year's T.T., and in the various articles on the races that have appeared in your excellent paper. After having read "Road Rider's" article on "The Future of the T.T.," I cannot help thinking that the problem of capacity limit for the Senior race could be solved by having three races instead of two. Under the present system genuine lightweights have to compete in the same race as 350 c.c. machines capable of astonishingly high speeds, with the result that their own very creditable performances are completely overlooked by the general public; and in spite of the unexpected result of this year's Senior race, the same thing will probably happen to 350 c.c. machines if they are included in future Senior events as "Road Rider" suggests.

"Road Rider" states that so far as 500 c.c. machines are concerned, the T.T. has served its purpose. Now I consider that all classes of motor cycles, although overwhelmingly superior to their forerunners of eight or nine years ago, are still far from perfect, and that until the time comes when there are no cases of stoppage through mechanical trouble of any sort the T.T. races should continue to be held. I also think that it would be much more fair to the manufacturers as well as to the riders, if three races were run in future, the first for genuine lightweights, the second for machines of from 350 c.c. to 500 c.c., and the third for machines over 500 c.c.

LAY READER.

Sutton.

Sir,—I quite agree with "T.T. Aspirant" in *The Motor Cycle* of June 30th, that "Mr. H. R. Davies deserves all credit for his masterful performance," but surely he is not just when he says "one must not place too much admiration on the motor cycle concerned (the 2½ A.J.S.)."

Motor cyclists I have met since the race have been simply bursting with admiration for the wonderful little machine and the Stevens Brothers.

Has "T.T. Aspirant" thought of the years Messrs. A. J. Stevens and Co. have fostered and developed the 2½? Has he thought of the labour and expense it needed to produce at last a 2½ which has really startled the motor cycle world? Let us give credit and admiration where due.

Wallasey.

ADMIRER.

A fine panorama from Trinalour Hill, which was included in the first day of last week's Scottish Trials. The riders are L. A. Welsh and J. W. Walker, both on $4\frac{1}{2}$ h.p. B.S.A.'s.

THE LAW AND THE MOTOR CYCLIST.

Sir,—Quite recently I saw a motor cyclist who, with a lady on the carrier, was passing through the town (Newport, I.W.). The police constable on duty noticed that the lady's coat covered the back number plate; the inevitable followed. Similar cases are read of daily, and motorists are often fined for *not* breaking the law.

No one seems to know just how we motor cyclists stand with regard to the law, and as yet I have been unable even to purchase any printed matter on the subject. I believe I am right in saying that there are no books on sale which deal with motor cycle laws only. Why is it? Surely such a book would be eagerly sought for by nearly every motorist.

C. STAGG.

[A comprehensive summary of the law so far as it affects motor cyclists is contained in "Motor Cycles and How to Manage Them," issued by our publishers.—Ed.]

SIDECAR V. CYCLE CAR.

Sir,—There is a good deal in what Mr. R. Younger says as to the advantage of the cycle car or light car over the sidecar outfit, but the cramped position of both driver and passenger in the former is a point he does not touch upon.

I know a man who has just given up his sidecar outfit and bought a small car; his wife, after a few rides, is talking very regretfully of the extreme comfort of her sidecar as compared with the new light car! But when Mr. Younger comes to the question of springing (especially as regards the bicycle) I am with him. My present outfit is a 350 c.c. two-stroke bicycle with light sidecar, and my two great drawbacks are noise and vibration. At my age (64) I am quite satisfied with the speed I get, but what I want is an outfit which combines: Cycle and sidecar efficiently sprung, noiseless engine, reliability and accessibility, and reasonable price.

F. COLE.

Sir,—I wondered on reading the letter on "Sidecar versus Cycle Car," whether the writer ever had the privilege of either riding in or driving the Matchless outfit. After being the owner of an Indian and Harley-Davidson outfits, I have now a model H2, which will take four up, and on a run such as from the Midlands to Cleethorpes will maintain an average speed of 30 m.p.h. non-stop, top gear throughout. This machine is fitted with the Lucas Magdyno, and to my mind it is the finest lighting set for a sidecar that could be employed. As regards the lubrication, to my mind the Best

and Lloyd drip feed is splendid, as it is possible to set this exactly to a pumpful every five miles as advised by makers of the machine. As regards the petty breakdowns, I have just done 3,000 miles without ever having to trouble even a spanner. On the machine in question a one-lever Amac carburetter is fitted, and this is the one and only lever that has to be manipulated. The exhaust valve lifter is incorporated with the kick-starter, and when the carburetter is flooded I have never had to kick twice, even in cold weather, to start up. As regards comfort, how many times during the year do we have to face the wet and mud, and if suitably clothed it does not trouble the motor cyclist. In relation to the rear springing, I must say that the Matchless with its coil springs and Brooks saddle is as comfortable as, and more so than, some of the light cars upon the market. On bad roads I have been able to maintain 25 m.p.h., when other vehicles, including sidecar outfits, had to take their time. Your correspondent states that he is passed by car after car, but I may say that I have yet to see anything on the road, either sidecar or light car, including "Tin Lizzies," that can show me a clean pair of heels. Should I part with the machine I now own, my next would be the Matchless, fitted with the M.A.G. engine, which for speed and power cannot be equalled. I have no interest in the firm whatever except as a satisfied user.

London.

SATISFIED.

Sir,—With reference to Mr. Younger's letter in *The Motor Cycle* of June 30th. Has he tried a popular model G.N.? I had one at Whitsun, and have now done 4,000-5,000 miles. I have not had a breakdown of any description as yet, and though I have owned practically every sidecar machine since 1907 I would never go back to one. I think the G.N. is a marvel of reliability, comfort, economy, and speed.

C. PETER JACKSON.

ULTRA-NARROW SIDECARS.

Sir,—“A.C.C.” (London) desires a sidecar which will pass through a passage 53in. in width.

I have a 4 h.p. combination with a Hopley folding sidecar which will go through a doorway 30in. wide. I have used this outfit for the last eighteen months with every satisfaction. The sidecar is supplied with couplings to fit any standard machine. The maker is F. Hopley, Upper Highgate Street, Birmingham.

Usual disclaimer.

T. W. GOODALL.

AVERAGE SPEEDS.

Sir,—Your correspondent "Eclipsed" is optimistic if he thinks that most Douglasses can do 55 m.p.h. He is pessimistic when he imagines that averages of 28 m.p.h. are difficult to obtain.

I have no wish to write adversely about the Douglas, but I am convinced that very few 2½ h.p. Douglasses can do more than 45 m.p.h. "Ixon," some time ago, stated that he had never got more than 45 m.p.h. out of his Scott. Well, my own machine is a Scott, and a 1912 model. It will regularly do 55 m.p.h., and well over fifty with a passenger on the carrier.

NORMAN WILLIAMS.

A REJUVENATED ANCIENT.

Sir,—Having noticed several machines are now being built by motor cyclists, I am sending you a photograph I have taken of one I have lately built entirely from parts purchased through the advertisement columns of *The Motor Cycle*, with the exception of magneto, spokes, and nipples, which I purchased in Cambridge. The engine is an old 3½ h.p. Rex. It was equipped with accumulator and coil. I have now fitted up a Dixie magneto on a platform at the back of the engine. The original surface carburettor was scrapped and replaced by an Amac, and a new silencer was made and fitted with flexible pipe for exhaust. The frame I cut down 4½ in. The top tube was bent and brazed in, also back stays. The old 28 in. wheels were scrapped, and a new pair built up on 26 in. D rims. 26×2½ in. Clincher heavy tyres and tubes were fitted, the old front forks were rebuilt to form spring forks, the only new parts being two Druid springs. A new two-gallon petrol tank was made to fit under the top tube, also separate oil tank under the saddle, with hand pump for lubrication.

I think you will agree with me that, for the trouble taken, I have a very serviceable machine.

ARTHUR H. SUCKLING.

FASCINATING BELT DRIVE.

Sir,—The T.T. is undoubtedly a ruthless selector of the finest combination of man and machine. Other things being equal, the race is won by superb jockeying and acceleration powers, and calls for a positive transmission. The T.T. excites more public interest than any other motor cycling event, and the lay mind, glancing down the transmission column in the tabulated list, is apt to conclude, naturally enough, that belt transmission is a thing of the past.

Now, here is my grumble. Having been provided with some of my most pleasant memories by Messrs. Zenith Motors, Ltd., I submit it must be a little irritating to them and kindred excellent makers of belt transmission. The tourist is provided with all the acceleration necessary by these firms. Incidentally, a Zenith driver has more time to devote to the glories of the countryside, or to his companion, than the perpetual wangler of three-speed gear levers and clutches, to say nothing of a grateful engine. When the chain-drivers provide me with an equivalent to this, and as care-free, I will cancel this growl.

A. WOODMAN.

Sir,—I was much interested to read the letter from "Medicus" re the Rudge-Multi, and should like to add my own experience with this most excellent mount.

I took delivery five months ago, and my mileage to date is 5,200. It is used daily to take me to and from business and at week-ends for pleasure runs, and I cannot speak highly enough of the service this machine has given me. I can fully bear out the opinion of "Medicus" concerning the pleasure derived from using the most interesting multi-gear, a pleasure totally debarred from gear box users. I cannot, however, agree with him on the question of running with slack belt. My pocket would not stand it; and, in any case, I do my best to prevent slipping in any weather, wet or dry.

"Medicus" will find his belt will last very much longer if he keeps it at a reasonably tight tension, as a slack belt "whips" to a very great extent when running, as well as the small amount of slip wearing the belt sides. If he does not already do so, I most strongly advise him to fit those belt fasteners which are provided with leather pads butting up against the belt ends. My own belt seems to be lasting indefinitely since fitting them. These, in conjunction with

the most flexible belt obtainable, give a most satisfactory transmission.

The machine as delivered had the touring handle-bars. I had these changed for the T.T. bars, with a big improvement in general controllability, and far less tendency to skid on greasy roads and tramlines. For the first day or two the new position seemed strange, but now it is obvious to me it is the correct position. One feels part of the machine, and not an accessory perched on top.

A 700×80 mm. tyre on the rear wheel has increased the comfort of an already very comfortable machine, without making any noticeable difference to the hill-climbing powers, although the gear is raised appreciably by the larger wheel diameter. It is also much more satisfactory when taking a pillion passenger. This I have found perfectly satisfactory, and safe, provided the following points are observed:

1. The pillion seat kept as far forward on the carrier as possible.
2. The lady sits *astride*.
3. Footrests on the chain stays (very easily made or obtained).
4. Hand rail on front end of the pillion seat.
5. The passenger never, under any circumstances, puts her foot to the ground until the machine has actually stopped.

If these points are observed it is as safe for two as for one, even over very bad roads, where the usual side position would be highly risky.

RUDGE IT.

Marple Bridge.

CLOSE RATIO GEARS.

Sir,—I do not know in what sort of country Mr. Hartley does his motor cycling, but here in South Devon I not only require, but frequently use a bottom gear of 14 to 1 on my 4 h.p. Norton solo, on hills, too, that seem trifles when compared to those around Lynton on the London-Land's End route.

I am quite prepared to admit that this is on the "safety" side, but I should not feel happy unless my lowest gear was at least a "double figure" in this district.

The Rudge variable gear question is summed up by Mr. Hartley himself when he says that "on this same bottom gear (about 6 to 1) I have climbed Edge Hill, two up, after putting up a 30 m.p.h. average from Southam (without a stop at the foot of the hill)."

Exactly. As long as the hill can be rushed there is no need of a lower gear than 6 to 1. If Mr. Hartley had had to stop at the foot and then make the ascent, he would probably have found the climb a little more difficult. It is just because of possible banking and consequent restarts on stiff gradients that "double figure" low gears are supplied and appreciated by the average rider.

Perhaps a good compromise to meet general requirements would be to fit a four-speed gear box as standard, with ratios of, say, 4½, 5½, 7, and 13½ to 1.

113 Motor Cycles and Cycle Cars in Edinburgh M.C.'s Annual Six Days Event. Splendid Performances by all Types of Machines over Difficult Course. Amulree, Applecross, and Inverfarigaig Account for Few Failures.

THE FIRST DAY, 183 MILES.

Route: Edinburgh, Stirling, Crieff, Amulree, Kenmore, Dalwhinnie, Kingussie, Inverness.

Test Hills: Amulree (a.m.). Trinafour (p.m.)

THE two chief features of Monday's run were the excessive badness of the roads and the complete triumph of the 1921 motor cycles over two hills, which were once regarded as formidable. Many of the main Scottish roads seem to have been left unrepaired since the war; and near populous centres like Stirling surfaces are tolerated on main roads which would create a scandal if

they lay in remote corners of England. Several patches were pot-holed 6in. deep, and ridged 8in. high. They seemed first to have melted, and then to have been used as an exercising ground for tanks. The consequence was that such moorland roads as that past Amulree Hotel and

the cross road from Whitebridge towards Struan came as a positive relief. In ordinary years they used to seem rather trying.

On Amulree everybody had heaps of power. The majority of the entrants literally toyed with the climb, merely changing down to bottom gear for the S bend, and changing up again above it. The 2½ h.p. Hawker sidecar made a star ascent, and was loudly cheered. The two commonest blunders consisted of tackling the hairpins too fast or too close in, and practically all the fourteen failures resulted from these causes. Where so many did well, it is hard to particularise, but all the "babies" naturally deserve credit—the four Hawkers, Cowan's and Kershaw's New Imperials, Wilson's Hobart, Hanwell's Cedros, the O.K.'s, Hubbard's Coulson, "Calderon's" Velocette, Guttridge's M.T., Gibson's Royal Ruby; Browne's Douglas, and last, but not least, Carfrae's 1915 2½ h.p. A.J.S. Amongst the bigger machines star ascents were put up by G. Brough and H. Karslake on their 5.2 to 1 geared Brough Superiors, Cummin' (Sunbeam), Fenn (Raleigh), Downie (Raleigh), A. F. Downie (A.J.S. sc.—perhaps the finest of many fine sidecar climbs), Boddington and Morgan (Morgans); Newey (Ariel sc.), Brown and Dance (Sunbeams—the latter dodging a baulk cleverly), and Peffers (Indian Scout). Some of the sidecars skidded very clumsily.

The Second Test Hill.

Trinafour has no special gradient, but several sharpish corners—two covered with six inches of sand, and two with big flints. It is possibly a nasty climb on a wet day, but on this occasion it was dry and loose. There were only five failures, and of these only one was due to lack of engine power, the others being ascribable to clumsy handling.

The first day naturally abounded with incidents. Banner, the Swiss substitute for Watson-Bourne, regarded the event as a T.T., and not infrequently used the Continental rule of the road. Near the foot of Amulree he dryskidded in racing round a corner, and crashed. His ascent of Amulree is perhaps the finest on record, for his forks and frame were bent; his bottom gear was 5.2; he steered one-handed, for the other wrist was sprained or broken; and

The Dawson spring nailcatcher, an effective device attached to the mudguards of several competing machines.

Spark gaps, or "intensifiers," were fitted to the plugs of H. Crisp's 4½ h.p. Humber

(Top) This illustration conveys an idea of the state of the roads on some sections. The rider in the foreground is A. Peffers (4 Indian).

(Centre) F. W. Viles (5-6 Raleigh) and J. W. Morton (3½ Rover) on the lower hairpin bend of Amulree.

(Bottom) A. J. Sproston (3½ Lea-Francis) and A. Brown (3½ Sunbeam) making light of Trinafour.

blood was running into his eyes from a cut on his head.

Many people had bad tosses. Inverness-shire roadmen are fond of covering the road with three or four inches of dust and grit, which is ill stuff to corner on. Punctures were not numerous, but Fenn pulled his back tyre right out of the rim by braking hard. Motor cyclists may be interested to hear that six 8 h.p. Rover light cars climbed Monday's hills, and finished on time. The air-cooled A.B.C. car lost marks through catching fire as the result of a back-fire through the carburetter, but otherwise performed admirably.

NOTES.

M. Fraser (8 Royal Ruby sc.) seized his engine at Trinafour.

The following lost marks on the first day through being late at controls: R. S. Macrae (7-9 Harley-Davidson sc.), 18; A. G. Fenn (Raleigh), 25; R. K. Morri-

The Scottish Trials.—

son (7 A.J.S. sc.), 1; T. Sinclair (7-9 Harley-Davidson sc.), 3; F. F. Sibley (7-9 Rudge sc.), 11; J. A. Leyland (3½ P. and M.), 35; W. H. Udall (6 Bradbury sc.), 70; and J. Wallis (6 Bradbury sc.), 64.

Amulree took the following toll in stops: D. C. Sangster (3½ James), A. Shepherd (6-7 B.S.A. sc.), J. B. Richardson (G.N.), K. Holden (5-6 Raleigh), J. T. Wood (10 G.W.K.), T. Hunter (6-7 B.S.A. sc.), R. T. Ball (3¾ Scott), H. Crisp (4½ Humber), T. Sinclair (7-9 Harley-Davidson sc.), J. E. Chisholm (3½ Ariel sc.), D. Parsons (8 Matchless sc.), W. A. Davenport (5-7 Coventry Victor), J. A. Leyland (3½ P. and M.), W. C. Hemy (7 A.J.S. sc.), J. A. Porter (2½ Massey-Arran), and W. R. Bruce (5-6 Monopole).

On Trinafour the under-mentioned were debited with having stopped: D. C. Sangster (3½ James), A. Shepherd (6-7 B.S.A. sc.), T. Peck (6-7 Ariel sc.), W. A. Davenport (5-7 Coventry Victor), and C. Christie (7 A.J.S. sc.).

After the competitors had gone up Amulree, a non-competitor made a very neat ascent with a girl on the carrier of his machine.

The Kenmore policeman waxed so enthusiastic that he kept busy filling up the riders' tanks with petrol.

The first day's retirements included: R. Banner (Brough Superior), fell and was injured; T. Sopwith (Hawker), burnt-out magneto; N. Hall (2¾ O.K.), B. L. Bird (4½ B.S.A.), and J. E. Chisholm (3½ Ariel sc.).

SECOND DAY, 183 MILES.

Route: Inverness, Strathpeffer, Achnasheen, Jeantown, Applecross, and back by same route to Inverness.

Test Hills: Tornapress and Applecross.

Another fine day greeted the competitors on Tuesday morning, but a cool wind was blowing, and the temperature was by no means excessive. The surface as far as Strathpeffer was of the main road type, and for the most part in the way condition which precedes the formation of pot-holes.

After Strathpeffer the going was more or less of the moorland order, but usually permitted of high speeds, the only difficulty being to identify a rough patch in time to avert a wobble. But a harder section for timekeeping than that from Jeantown to Applecross—in either direction—can hardly be imagined. It consists of nineteen miles, viz., six miles of rough, twisty lane, a terrific five-mile climb, and an equally terrific five-mile descent. Over most of these last ten miles, it is impossible to pass a sidecar or a car, and very difficult to overtake a solo mount. Sixty minutes were allotted for these nineteen miles. A. G. Fenn (on a Raleigh twin) actually rode them in forty minutes, after repairing a puncture.

Naturally the entire interest of the day's run concentrated on the two test hills—the Pass of the Cattle, as the

Tornapress-Applecross section is called. Tornapress commences with four miles of heavy collar work. The narrow road is sometimes of short turf from edge to edge, occasionally of loose stone (of all sizes), but generally composed of three ruts, divided by really stiff clumps of moor grass a foot high with reefs jutting through here and there. To the right is a grassy hill 1,500ft. high and very steep; to the left a series of gannt, gnarled crags, with wild deer grazing beneath them; below a splendid loch, backed by a mountainous *massif*; above a fantastically rugged sky line.

accelerated without the least sign of a knock. It is simply impossible to award special praise, where nearly everybody performed perfectly. The following mentions are suggested by special circumstances: W. Peatty, on the little Hawker sidecar, made a most miraculous climb, and everyone was sorry that injuries to his sidecar chassis and rear wheel ball races were threatening to cause his retirement.

The smallest engine in the trial, the Velocette, ridden by "M. T. Calderon" (who is not H.R.H. the Duke of York, as was rumoured), did splendidly, as

Fine scenery compensated for the rough going and stiff hills. The riders shown are A. G. Cocks (Beardmore-Precision) and B. Bladder (8 New Imperial sidecar) on Trinafour.

For the fifth and last mile the road goes mad, and resolves itself into three major hairpins, all acute, and connected to very rough grades of 1 in 5 or 6. There follows the difficult and dangerous descent known as Applecross, which is generally considered a much easier climb than Tornapress, though its stiff grade commences near the foot. Both hills are "engine heaters" of the first order, and Tornapress confronts one with three wicked corners just when the engine is most inclined to conk.

Splendid Performances.

The entry put up a truly magnificent performance, almost monotonous in the high level of its excellence. Man after man went up fast, slowed at a corner, cocked a wary eye at the lie of the ground, slewed his machine round, and

did the next smallest, Hanwell's Cedros. The small fry, as a class, covered themselves with glory, notably Handley's O.K., the two solo Hawkers; and Kershaw's New Imperial. Hugh Gibson put his feet down for a few yards at the second hairpin; his engine has a very light flywheel, and climbed well where its revs. could be kept up. Cocks (Beardmore) ran into the ditch at the second hairpin. His front fork was obviously most comfortable on ordinary roads, but was almost too springy on boulders.

As the whole hill was an official non-stop, Shepherd's Champion had to cover several miles with the stand trailing. J. B. Richardson on the G.N. is a sportsman of the first water. He had trouble on Monday, and got in other people's way on the narrow roads. To-day he

This illustration conveys a very good idea of the hairpin bend on Tornapress, and shows E. Simms (6 Martinsyde sidecar) negotiating the stiff rise immediately following.

NOTES.

The unwisdom of sandwiching cars, sidecars, and bicycles together was proved on Tornapress, where much serious hauling occurred. Four motor cycles had to creep at 7 m.p.h. for over a mile behind a cautiously driven Calthorpe light car.

Browne's Douglas caught fire when restarting after the Jeantown check. It was put out by the Pyrene outfit from the petrol lorry, and Browne spent the rest of the day trying to coax partially burnt rubber belts to grip.

Four of the official cars konked out on Tornapress, including a brace of Fords.

On the way home one of the official Fords hit a bridge. Allan Hay, the veteran Scottish cyclist, was thrown out, and was reported to be suffering from slight concussion.

Gifford's Martinsyde collided with a bridge near Jeantown; the frame was sufficiently damaged to cause his retirement.

The scenery round Tornapress is so gorgeous that some of the competitors propose to revisit with time to spare. They dare not take an eye off the road in the trials, so bad was the going. George Brough has caravanned in this outlandish region with a Ford van.

T. Hunter (6-7 B.S.A. sidecar) on the rough surface in the picturesque district near Achanalt. The ratty nature of the course in places troubled some of the solo competitors, who had to make up lost time.

asked that he might start last. Fate did not smile on him, as he deserved, or he took Applecross in penny numbers. R. B. Clark (Zenith) had miserable luck: a few yards from the summit a tone lodged in his back wheel pulley, and threw the belt off. Peffers (Indian Scout) put up a model ascent. The Scotts did better than most of the water-cooled cars, for they did not steam, though they could not replenish their radiators whilst in motion. Guthrie (Royal Ruby sc.) had a long stop two-thirds of the way up the hill, but afterwards took the top section in good style. Shepherd's B.S.A. also konked out half-way up. Brough made a perfect climb, but Karslake (on a sister machine) seemed to hang on to top gear too long: many riders could hardly spare a hand to change gear, owing to the jolting they received from the surface. Carfrae's 1915 A.J.S. konked out just above the second hairpin, much to everybody's surprise: an empty oil tank was the prime cause.

The hill is so long that six car loads of observers were kept busy observing it with binoculars, and a detailed description is impossible. We can only say that after commencing to note details of each man's climb we soon exhausted our supply of superlatives. There were a very few exceptions, mostly due to inexperienced and clumsy driving. But men and machines, as a whole, displayed supreme mastery of a terrible ascent which one expert has dubbed "Great Britain's only hill." Knocking, over-lubrication, and a hot, oily smell—which until recently were the concomitants of a severe hill—were conspicuous by their absence. Over a hundred fine climbs were made on the longest steep hill in these islands.

Quite one of the best performances on Tornapress was made by W. Peatty. This 2½ h.p. Hawker sidecar outfit surmounted the difficult hill in quite a surprising manner.

R. S. Macrae's passenger failed him on Monday, so Macrae borrowed an Edinburgh mechanic, complete with overalls, who was heartbroken when the official passenger duly arrived on Monday night.

C. A. McKeand was using a 3½ in. tyre on the back wheel of his Harley-Davidson.

Among Tuesday's retirements were T. Peck (6-7 Ariel sc.), broken chassis; T. Sinclair (Harley-Davidson sc.), broken chassis; W. T. Woodcock (6-7 Ariel sc.), magneto trouble; E. H. Gifford (6 Martinsyde sc.), fell; W. A. Davenport (Coventry Victor); and R. Spence (4 Harley-Davidson), broken frame.

Only twelve competitors were defeated by the notorious Tornapress. They were R. Carfrae (2½ A.J.S.), A. Shepherd (6-7 B.S.A. sc.), J. B. Richardson (G.N.), C. Guthrie (8 Royal Ruby sc.), A. G. Cocks (Beardmore-Precision), H. Gardner (3 Rover light car), P. Cunningham (3½ P. and M.), W. G. Donaldson (5 Rover sc.), E. S. Astley (5-6 Rover sc.), K. M. Quaille (8 New Imperial sc.), W. C. Hemy (7 A.J.S. sc.), and J. A. Porter (2½ Massey-Arran).

Four only failed to climb the return hill from Applecross: R. K. Morrison (7 A.J.S. sc.), W. G. Donaldson (5 Rover sc.), and R. H. Lockhead (3½ Ariel).

The Morgans made light of both test hills. (For the performances of the air-cooled Rover light cars, see *The Autocar*.)

The following lost marks on Tuesday: D. Wright (4 Norton sc.), 4; A. Shepherd (6-7 B.S.A. sc.), 61; F. G. Bodington (10 Morgan), 2; R. K. Morrison (7 A.J.S. sc.), 61; F. T. Sibley (7-9 Rudge sc.), 19; J. E. Chisholm (3½ Ariel

sc.), 1; W. G. Donaldson (5 Rover sc.), 55; J. A. Leyland (3½ P. and M.), 16; and W. H. Udall (6 Bradbury sc.), 31.

In the interests of accuracy, we have referred to the hill popularly known as "Applecross" by its official name "Tornapress." When motor cyclists talk of Applecross, they mean the whole of the "Pass of the Cattle," and the Tornapress section on the eastern side, the more difficult on account of its hairpins, has become fixed in the minds of riders as Applecross, which title by rights, and according to the official programme, is reserved for the ascent from the hamlet of Applecross, on the return.

THIRD DAY, 74 MILES.

Route: Inverness, Abriachan, Drumna-drochit, Fort Augustus, Glendoe, Foyers, Inverfarigaig Corkscrew, Inverness.

Test Hills: Abriachan, Glendoe, Inverfarigaig.

The bad going began to tell its inevitable tale on the third day, and many machines showed signs of jury-rigging. Shortly after breakfast, the news of Harry Hawker's tragic end cast a gloom over everyone. He would have been there, riding one of his own solo machines, but for the claims of the Aerial Derby; and W. Peatty (his brother-in-law) left at once for the South.

This day's run was limited to seventy-four miles, nominally to give the men a mid-week "easy" and a chance to change their tyres comfortably in the evening if they so desired; and many of them did! But the "rest" was purely nominal, for the seventy-four miles included several excursions into the "doorstep districts," and no fewer than three test hills.

A big twin's debut: the chain-driven 7-9 h.p. Rudge, driven by H. Nelson, at the side of Loch Achanalt.

G. W. Walker, 3½ h.p. Norton, secured 5 Firsts.

Dr. A. Lindsay, 3½ h.p. Norton, won 2 Firsts and 2 Seconds.

Jack Thomas, 3½ h.p. Norton, won 9 Firsts and 2 Seconds.

Fastest Time of the Day, both Solo and Sidecar, made by G. W. Walker, 3½ h.p. Norton.

Norton

NORTON MOTORS LTD., BIRMINGHAM.

A real corkscrew. W. G. Donaldson (5 Rover sidecar) followed by an Ariel rider on Inverfarigaig hill. This hill tested both engines and riders.

Once again we travelled through some of the most gorgeous scenery in Great Britain, but rough going kept our eyes so glued to the road that we dared not glance at the views.

Of the three hills, Abriachan is an easy second gear climb, with one very dusty hairpin; it accounted for three men. Glendoe is in two halves. The front stairs are smooth and steep; the attic stairs, after the landing, are fearfully rough, and semi-vertical. Here twenty-two good men and true gave up the ghost, nearly all through pure crashes due to the surface; neither loss of power nor clumsy driving was to blame. Meanwhile others had fallen by the way. Moser's Triumph and Miller's Bradbury were unrideable after collisions with banks; and Milne's (6-7 B.S.A. sc.) gear box had wilted at the very base of Abriachan. At lunch there was great "wind up" about the new hill—Inverfarigaig Corkscrew. Worse was to follow, for a special check was organised at Foyers—one and a half mile away—to reduce baulking, and a five-minute interval was allowed after each car was sent off.

Inverfarigaig.

The hill is purely a test of riding, and is easily described. Lay a sheet of note-paper against your coffee-pot, dear reader, at an angle of 45° . Impose upon it three capital letters S, turning the centre one the wrong way round. Let these letters be of the flat or squashed-out type—not as square as those employed by *The Motor Cycle* comps. Imagine a road 6ft. wide, a surface composed as to the centre of soft grey dust 6in. deep and 4ft. wide, and as to each side of hardish smooth stuff 1ft. wide.

The grade at the outside of the six hairpins is about 1 in 8; at the kernel

of each hairpin it may be 1 in $5\frac{1}{2}$ for a yard or so. Obviously, if a man went up slowly, and took the outside of each hairpin, this would make an easy climb. Everybody who adopted this plan went up finely, but some hesitated to cross the soft centre between each pair of hairpins, and all this class wobbled and footed. Some appallingly clumsy driving was shown, and none of the twenty-five machines which failed appeared to do so for mechanical reasons. It is emphatically a "rider's hill." Its difficulties can be gauged from the following pointers:

- (1.) One can stand at the top and pitch a tennis ball to the bottom.
- (2.) Two of the cars reversed on four of the hairpins.
- (3.) Quite a lot of the men drove on their clutches.

(4.) Reg. Brown upset his Sunbeam sidecar.

(5.) S. Hall capsized his Morgan, tipping out himself and his passenger.

(6.) The names of the fallen (see below).

(7.) The writer had to put his helm over so hard on two corners that his T.T. bar pinned his thigh to the tank.

Star Performers.

The whole of the six hairpins cannot be watched simultaneously, but if a prize had been awarded for the best solo ascent it might have lain between J. W. Wills (Powell) and G. Dance (Sunbeam). Both picked the correct path to a hair; both accelerated without timidity between hairpins; neither put a foot to earth. Wills had no difficulties. Dance came up 119th,

H. S. F. Morgan, in a characteristic attitude, piloting his little runabout on one of the steepest portions of Tornapress. Observe the acuteness of the hairpin bend.

as a sandwich. She said "Hech, sirs. . . ."—and then some!

The G.N. is using a new type of shock absorbers on its front axle.

Inverness boasts a motor cycle of native manufacture. It is made by the official garage people, Macrae and Dick, and has a G.R.I. rotary and poppet valve engine.

Wallis's Bradbury blew out the exhaust valve cap of its front cylinder, and "carried on" with it secured by a neat bridge of spanners, lashed down with wire.

Calderon's sparking plugs had an evil habit of growing metal whiskers on their central electrodes, and thereby shorting. He fell back on an old aero Lodge,

Archie Cocks was riding one of the new Beardmore sports models with a rigid rear frame. He did very well, barring two hill stops, ascribable to the bouncing which a light machine receives on boulder-strewn surfaces.

In addition to the retirements mentioned in Tuesday's notes, there were several other vacant places, revealing that others had "given up." Among these were J. E. Chisholm (Ariel), E. S. Astley (5-6 Rover sc.), and Spence (Harley-Davidson). Wednesday's retirements included D. S. Milne (B.S.A. sc.), C. Moser (Triumph), J. R. Miller (Bradbury),

The following lost marks on Wednesday: E. A. Rollason (Ariel), 7; Quail

In Garve. D. Wright, jun (4 Norton sidecar) returning from Applecross.

when the fifth hairpin was cut to ribbons. His machine was almost stationary in the soft stuff for a second; but, like the past-master in rough-riding that he is, he kept his feet riveted to the rests, and jockeyed the machine up. This pair were run close by Cumming (Sunbeam), Fenn, Holden, and Downie (Raleighs), Clark (Zenith), Hall and Handley (O.K. Unions), Edwards (B.S.A.), and Lindsay (Rover), none of whom footed. The smallest engine of all—Calderon's Velocette—went up surely with a steady foot on one corner, and Hanwell's Cedros did finely, too. Perhaps a dozen of the solos only extended a leg once apiece.

Passenger Ascents.

It is harder to pick out the best passenger ascents. The G.N. was superbly handled; but to reverse on narrow hairpins when one is over-geared and the engine is out of tune spells trouble. Perhaps the honour lay between Newey (Ariel), who appeared to make an absolutely perfect ascent, devoid of front wheel skid or back wheel spin, and Bladder (New Imperial), whose methods were a trifle more ferocious, so that he just grazed the bank at the fourth corner. In any case, this pair were run very close by Downie (A.J.S.), Nott (Matchless), Quail (New Imperial), and Macrae (Harley-Davidson), all of whom put up magnificent climbs. The three Morgans differed perceptibly. Hall upset, Boddington came up steadily on a Parsons chain, and Morgau skid-cornered in lurid fashion.

A veil must be drawn over 20% of the climbs, in which good machines were dishonoured by sheer bad driving. But several individuals registered rather special ascents. Farr (B.S.A.), Lewis (P. and M.), Wilson (Hobart), and Braid (Douglas) elected to charge the hairpins at speed, and their subsequent antics earned them the soubriquet of "wild men" from the crowd. Possibly their gear ratios compelled speed: but their climbs were more courageous than graceful, and thoroughly scattered the spectators. One unfortunate entrant was handicapped by a frame layout which simply would not steer! When he came up we all took cover behind the nearest trees.

NOTES.

There was a regular mix-up and a wholesale baulk on Glendoe, towards the end of the climb. In the midst of it a lady passenger had a fit of hysteria.

When a Douglas caught fire at Jeantown on Tuesday, another competitor nosedived into an adjacent cottage, and seized the door mat wherewith to put out the flames. Later an ancient Highland dame appeared in search of the missing mat. They solemnly handed her a charred triangle of mat about as big

L. Newey (6-7 Ariel sidecar) passing The Motor Cycle photographer's Matchless near Kingussie.

The Scottish Trials.—

(8 New Imperial sc.), 30; and Bruce (5-6 Monopole), 7.

Hills a Stumbling-block.

The official list of stops on the test hills on Wednesday is as follows:

GLENDOE.—G. Brough (8 Brough Superior), H. Karslake (8 Brough Superior), J. Beck (8 Royal Ruby sc.), H. Nelson (7-9 Rudge sc.), T. Hunter (6-7 B.S.A. sc.), J. Browne (2½ Douglas), C. Guthrie (8 Royal Ruby sc.), A. G. Cocks (Beardmore-Precision), A. Peffers (4 Indian), W. Handley (2½ O.K.), G. M. Townsend (3½ P. and M.), D. Parsons (8 Matchless sc.), W. G. Donaldson (5 Rover sc.), J. A. Leyland (3½ P. and M.), W. H. Udall (6 Bradbury sc.), J. Wallis (6 Bradbury sc.), F. E. Marsden (3½ Sunbeam), W. C. Hemy (7 A.J.S. sc.), C. Christie (3½ Douglas), R. J. Braid (3½ Douglas), and J. A. Porter (2½ Massey-Arran).

INVERFARIGAIG.—G. Brough (8 Brough Superior), H. Karslake (8 Brough Superior), D. C. Sangster (3½ James), R. Carfrae (2½ A.J.S.), H. Nelson (7-9 Rudge sc.), A. Shepherd (6-7 B.S.A. sc.), K. Holden (5-6 Raleigh), D. K. Morrison (7 A.J.S. sc.), C. Guthrie (8 Royal Ruby sc.), A. Brown (3½ Sunbeam), J. A. Hilger (5 Rover), A. Conville (3½ Lea-Francis), L. A. Welch (4½ B.S.A.), G. A. Rollason (4½ Ariel), W. G. Donaldson (5 Rover sc.), J. A. Leyland (3½ P. and M.), W. H. Udall (6 Bradbury sc.), J. Wallis (6 Bradbury sc.), R. W. Lockhead (3½ Ariel), Reg. Brown (3½ Sunbeam sc.), W. C. Hemy (7 A.J.S. sc.), C. Christie (3½ Douglas), S. Hall (8 Morgan), J. A. Porter (2½ Massey-Arran), and W. R. Bruce (5-6 Monopole).

In open country near Carrbridge. J. A. Leyland (3½ P. and M.), followed by W. H. Udall (6 Bradbury sc.).

FOURTH DAY, 165 MILES. Inverness, Kingussie, Dalnacardoch, Kenmore, Dalmally, Oban.

No Observed Hills.

A perfect orgy of protests was entered against Wednesday's test hill failures, and the following were credited with clean ascents:

GLENDOE.—Brough, Karslake, Beck, J. Browne, Cocks, Peffers, Donaldson, Handley, and Braid.

INVERFARIGAIG CORKSCREW.—Brough, Karslake, Holden, Wallis, Marsden, and Reg. Brown.

It would be clean contrary to the famous sporting atmosphere of the "Scottish" for a competitor to grumble about official decisions; but a dispassionate onlooker may be allowed to say that, if men who capsize on hairpins are awarded clean ascents, rivals who fail through much pettier errors have an apparent grievance. The organisers have done their best to ensure uniform observation by transporting the same officials from hill to hill. But the system has not been an unqualified success. We know men credited with clean ascents who would have ranked as complete failures under any other management. On the other hand, if an exceptionally lenient standard is to be adopted, it should be applied with uniformity.

Thursday's morning's run was Monday afternoon's trip, taken in the reverse direction. We met a cold head wind, and found the corrugations of the Grampian road very trying, as they have a very short pitch, which makes the back wheel hammer.

Some Lightweight Misfortunes.

On the first section the youngest of our family lost its gold, for the tungsten contacts of the magneto on Calderon's Velocette gave out, and the spare breaker did not fit. So he had to change the points, a finicky job which made him 3m. late at Carrbridge.

J. Browne, on the 2½ h.p. Douglas, met a car on the wrong side of a corner just before lunch, and looped the loop. He was unhurt, but his machine was in no condition to continue. George Dance arrived outside the lunch check half an hour ahead of time. He explained that he had felt cold on the Grampians, and was in search of a warmer climate.

A hungry official, who arrived early at the lunch hotel, is said to have moved round a table after the fashion of the Mad Hatter in "Alice in Wonderland," and so to have consumed six plates of salmon.

Inverfarigaig Hill is in the midst of sublime scenery, but the beauty could not be appreciated by all the competitors, the hill keeping them very busy. D. K. Morrison (7 A.J.S. sc.) taking one of the many hairpin bends.

The Scottish Trials.—

(Left) Neville Hall (2½ O.K. Union) and L.A. Welch (4½ B.S.A.) on the top portion of Abriachan.

(Right) D. Parsons (8 Matchless sc.) near Newtonmore.

The luncheon cider at the Breadalbane Hotel, Kenmore, was so heady that a certain teetotal rider is alleged to have covered the first two miles after lunch in 1m. 59s.

Up to Thursday night only one machine had failed on a hill through lack of power: all the other failures (and their name was legion) were due to bad surface or clumsy driving.

Under the latest Edinburgh Club regulations, one may upset a sidecar on an observed hill, and yet score a "clean ascent," provided one keeps the engine running!

Thursday's official score board: M. T. Calderon (2½ Velocette), 3 marks (magneto); E. H. Eaton (8 Brough-Superior), retired; F. G. Boddington (10 Morgan), 12 marks (lost his way); C. Guthrie (8 Royal Ruby sc.), retired (broken chassis); F. T. Sibley (7-9 Rudge sc.), 10 marks; J. Wallis (6 Bradbury sc.), retired; K. M. Quaile (8 New Imperial sc.), 3 marks; and W. C. Hemy (7 A.J.S. sc.), 3 marks.

FIFTH DAY, 180 MILES.

Route: Oban, Kilmelfort, Inveraray, Strachur, Glendarnel, and back to Oban via Dalmally.

Observed Hill: Ballochandrain.

The officials forbade J. Beck (8 Royal Ruby sc.) to start on Friday morning. His outfit had been damaged in a spill when cornering on Wednesday, and had gradually become quite unsafe. The sky was lowering when the survivors started at 7.30 a.m. for their 180 mile run over what the map suggested might prove a very rough trip. Actually 160 miles consisted of main roads with only one

badly pot-holed stretch. It is only fair to add that main roads in the Western Highlands would be called serpentine switchbacks anywhere else.

When we at last passed through the usual gate on to the usual moor, about ten miles from Ballochandrain, the solo machines had the time of their lives, for the centre of the cart track was smooth and firm, if the side ruts bothered the passenger outfits at times.

Contrasting Scenery.

Once more we had a perfect glut of marvellous scenery—glen and loch, and moor and forest, and river and mountain, the whole enhanced by diaphanous mist wreaths, spears of sunlight, and occasional palls of thick black cloud. Sky, water, and distant hills furnished every conceivable tint of blue from turquoise to the deepest indigo. We rode through the two most beautiful passes in Scotland, the delicate sylvan prettiness of Melfort, contrasting sharply with the dour majesty of Brander. Shaggy little Highland cattle made a picturesque foreground to some of these pictures—or so we thought until we met a herd of 100 on a steep hill. MacGillivray collided with one of them so heavily that he was forced to retire.

Tortuous Going.

The roads were continuously dangerous, as they twisted perpetually, and whatever lay beyond the next corner was generally hidden behind a steep little hump in the road or a screen of trees. For some reason the men drive much faster in the "Scottish" than in the A.C.U. Six Days—perhaps because the country is thinly populated, perhaps because they are always expecting a piece of vile going, on which progress must be slow. Whatever the reason may be, the driving has been decidedly rash on the average, and the casualty list is absurdly lengthy; many others have had the narrowest escapes, scraping skew bridges with their handle-bars, and so far forth.

The day's test hill, Ballochandrain, bore two distinct reputations till we met it. The officials said it was "easy"; some of the locals (and also *The Scotsman*) described it as "the steepest hill in Great Britain." The truth lies betwixt and between. Being over two miles long

From Kenmore into Oban we enjoyed seventy-two miles of gorgeous scenery and decent going. The Pass of Brander was a revelation of beauty, and the newcomers would have liked a longer stay there. Several minor crashes resulted along the curly switchback road, mostly as the result of "blinding" after tyre trouble. But H. S. Heaton, of the Cambridge team, took a more serious toss. Having previously damaged the footrest of his Brough Superior, he stopped to fell a young sapling and construct new ones. The job occupied some time, and he appears to have fallen asleep during the subsequent scorch. At any rate, he was found unconscious on the road at the end of a track which indicated a 300 yards wobble. The G.N. took him into Crianlarich, and his injuries are, fortunately, not important. The G.N. broke both its front springs, which were cleverly jury-rigged with steel plates and wire lashings.

Teams in the Running.

There are said to be eighty hotels in Oban; anyhow, we were all very comfortably bestowed, and no longer sleeping two in a bed, or one on a sofa, or one in a bath, as was the case at Inverness. The drought still continued, at which motor cyclists did not complain, for Highland roads are enough to scare a chamois when they are dry, and when they are greasy! But the lochs and burns were very low, and some of the great salmon rivers were represented by a mere thread of water trickling through an oasis of shingle.

The following teams still boasted three potential "golds" apiece on Thursday night.

SOLO.—B.S.A. No. 1 team and Sunbeam.

PASSENGER.—Rover.

CLUB.—M.C.C., Edinburgh, Redditch, Liverpool, and Glasgow Western.

The Scottish Trials.

It is bound to test cooling, especially when a strong wind blows up it, as was the case on Friday. The only hairpin occurs 800 yards up on a grade of 1 in $0\frac{1}{2}$; the road is wide, and the surface good. Above the hairpin the grade varies abruptly every few yards, and one or two "landings" are flat or even downhill for a few yards. A Tapley gradometer successively registered on the descent 1 in $4\frac{1}{2}$, 5.4, 7.2, 11.3, 8.1, 5, 4.2, 11.0, and 10.7. The hill owed its selection to an official who went up it in a car on a dark night. As there were only five failures, it cannot be difficult; and the comparative ease with which it can be climbed is due to the brevity of the few "steps."

All Sorts of Hill-climbing.

Most of the men took the hairpin at speed, especially the two Scotts driven by Langman and W. F. Scott. Ball's coat sleeve caught his throttle, and stopped him quite low down. Shepherd and his passenger were stopped by overheating beneath the hairpin, and had to run and push most of the way up, finally seizing up the engine. Calderon fell off for no apparent reason, and, having no clutch, could not "keep his engine running"—a famous phrase in the rules which has led to several very dubious ascents ranking as officially "clean." Welch (B.S.A.) and Rollason (Ariel) must have stuck towards the top, for they were going well at the hairpin. Christie got his Douglas up, so breaking a long run of hill failures. Hall's O.K. took the hairpin on second gear. Clark's Zenith struck one as the fastest solo, with Sibley's Rudge as a very speedy sidecar. Sinms (on the Martinsyde) made a notably masterful ascent. Moore's Scott raced up to the bend as if certain to crash, but his brakes got him round. But it is hardly fair to particularise, for, as usual, all the leading men were extremely workmanlike.

On the return journey there was a good deal of injudicious scrapping, and it is a marvel that no smashes occurred in a dust column, which was over thirty miles long. Several unlucky individuals pegged out on the home stretch. H. F. S. Morgan retired with engine trouble ten miles out, having previously lost no marks. Farr broke the steering head of his B.S.A.; he jury-rigged this very

cleverly, and rode pluckily on, only to be stalled with no compression near Dalmally. Reg. Brown's $3\frac{1}{2}$ h.p. Sunbeam sidecar carried on well with a clean sheet. Calderon broke his front chain near St. Catherine's, and finally finished on a flat tyre. Richardson broke all the springs of his Lea-Francis sidecar, and it had a queer, groggy appearance from behind. The end of the matter is that the average Scottish road is now in such appalling condition that any machine which does not drop or break a part is fortunate.

Tourists who intend to go North for their holidays this year should either change their minds or consult the A.A. as to the best routes. The road home on Friday was littered with men busy repairing tyres, and the majority of their troubles were due to cuts from stones. Road repairs over large areas of Scotland take the simple form of barrowing assorted rubble from the nearest river bed or quarry on to the road; and they do not object to flint, or use the ordinary 2in. gauge.

SIXTH DAY, 123 MILES.

Route: Oban, Dalmally, Crianlarich, Lochearnhead, Callander, Stirling, Edinburgh.

Oban was awakened by the unfamiliar sound of rain drumming down in torrents. However, the weather cleared before the start, and the road through the Pass of Brander is too gritty to provoke sideslip. Presently the clouds came down upon the tops of the crags and showers began to pelt us at brief intervals. Towards Callander we ran into a regular deluge, which rapidly flooded the roads, but after lunch the sun shone out again, and the water proved invaluable in helping us to locate potholes.

The scenery was once more gorgeous, but the track and the roads required most of our attention. Nobody had much trouble on the concluding lap. Just as Sproston was riding in at Edinburgh, a car knocked him down, and ran over his ankle; otherwise, apart from the rain, the last stage was a comfortable "blind" for most men. A. F. Downie was an exception, however; his contact breaker spring broke, and a helpful stranger broke the spare spring, and dropped two of the small screws in the grass.

Thanks chiefly to the magnificent weather, the 1921 Scottish may rank as

the easiest on record, though the roads were perhaps rougher than ever. The Edinburgh Club and its genial secretary deserve unstinted credit for their splendid organisation. There has not been the tiniest hitch in the arrangements from start to finish, and the medals were all ready, engraved for distribution, by dinner time on Saturday evening, a feat without parallel in such an event.

Apart from the usual handful of disgruntled protests, the competitors immensely appreciated the fairness and sportsmanship with which they were treated, and they all hope to come North again in 1922.

NOTES ON THE AWARDS.

The Sunbeam and B.S.A. teams tied for the team prize, and the judges decided to award it to the former on account of the smaller capacity of the engines. The passenger team prize went to the Rover light cars driven by Featherstonhaugh, O'Connor, and Hill (the only trio to finish with clean sheets in their class). The sidecars were thus defeated by the cycle cars. The club team prize falls to the Glasgow Western Motor Club. This award was made on a tie at the judges' discretion, the promoting club being well in the running for it.

The chief glory of the trials unquestionably adorns the Sunbeam entry of six machines, all of which won golds; whilst Reg. Brown's machine created a new record, being the first 500 c.c. sidecar outfit to make clean ascents of all the observed hills. Several single entries also secured gold medals. The Powell is a *débutante*, and was one of the outstanding machines throughout, especially for its neat, masterful work on hills. The Cedros has not previously graced a Scottish, and had the smallest engine in the trial, except the Velocette. It made light of its job. The two O.K. Unions were splendid, and Neville Hall is going to be famous some day. Two of the three Hawker "babies" romped home comfortably, and climbed excellently. In the 350 c.c. class the Coulson, the two New Imperials, the Metro-Tyler, the Royal Ruby, and the Hobart all defeated many much more powerful solo mounts. It need not be imagined that lightweight riders had a very strenuous time. Most of them pegged along very comfortably, averaging 30 m.p.h., except along the mountainous sections.

Easy going. A trio of solo riders nearing Carrbridge. The riders are (left to right) C. S. Hubbard ($2\frac{1}{2}$ Coulson), J. R. Fellows ($3\frac{1}{2}$ Sunbeam), and J. Westwood Wills (4 Powell).

SCOTTISH SIX DAYS TRIALS RESULTS.

Complete List of Motor Cycle Competitors and Awards.

112 Motor Bicycles, Sidecars, and Runabouts Started. 86 Finished. 52 Gold Medals. 21 Silver. 13 Bronze. 26 Retired.

A.J.S. A. F. Downie (7 sc.). <i>Gold medal.</i> R. Carfrae (2½). <i>Silver medal.</i> R. K. Morrison (7 sc.). <i>Bronze medal.</i> W. C. Hemy (7 sc.). <i>Bronze medal.</i>	COVENTRY VICTOR. W. A. Davenport (5-6). <i>Retired.</i> CEDOS. C. H. Hanwell (2½). <i>Gold medal.</i>	MORGAN. F. G. Boddington (10). <i>Silver medal.</i> S. Hall (8). <i>Silver medal.</i> H. F. S. CAMPION. J. Shepherd (6). <i>Gold medal.</i>	JAMES. D. C. Sangster (3½). <i>Bronze medal.</i>	POWELL. J. Westwood Willis (4). <i>Gold medal.</i>	

A full illustrated report of the performances of light cars in the trials appears in to-morrow's "Autocar."

A TRIAL IN THE HOME COUNTIES.

South Midland Centre Reliability Trial. Non-stop Rules over Two Circuits of Sixty Miles.

TWO unfortunate incidents were the cause of a most disappointing finish to the South Midland Centre Auto Cycle Union Reliability Trial, for which twenty-six competitors started at 9.30 a.m. from the King's Arms Hotel, Berkhamstead, on Saturday last, July 16th.

Two circuits were to have been covered, of which the morning's run was completed with but little incident. During the afternoon, however, the arrows at

various points *en route* were disturbed by some unknown source, and a number of riders lost their way.

Since the route was a secret one; this was the cause of much trouble.

Secondly, there was considerable delay at the finish which caused not a little grumbling.

During the morning's run, Chesham was the first village of any size through which the course lay, and driving was

not easy, due to the large number of sharp bends on the bad surfaced road. Turning sharp right in the village, a bee line was made for the well known Kop Hill. Few failures were recorded here. A. H. Harrison's 10 h.p. Henderson sidecar seemed to be troubled with a slipping clutch. Some good ascents were made, and R. H. Baxter (2½ Radco), although using such a small engine, seemed to enjoy the climb as did S. R. Axford's big Norton.

Skirting Chinnor, a section with ruts inches deep provided much difficulty for the sidecar outfits, whilst the two-wheeled machines had a distinct advantage. A northern road brought the riders back to Little London, and thence, *via* Tring, to the starting point.

None of the hills were abnormally difficult. The loose stony surface of the twisting roads, however, was awkward to negotiate at the schedule speed.

A similar route was, as stated before, covered during the afternoon, but it was difficult, owing to the inaccuracies of the arrows, to trace the whereabouts of a number of the riders.

G. E. Cuffe (Metro-Tyler) was the first to finish, with 45s. to spare, whilst C. Bourlet (3½ Ariel) was trailing his exhaust pipe.

A plucky ride was made by C. B. Smith (6 Zenith), who finished twelve miles on a flat rear tyre.

It is estimated that H. H. Saddington (5 James sc.) would secure the premier award.

At the start of the South Midland Centre Trial. W. Milligan getting under way on his Sunbeam at Berkhamstead.

AMIDST YORKSHIRE HILLS.

A Sporting Trial over Stiff Country, including Park Rash, Harden Bank, and Summer Lodge.

ORGANISED with the energy and thoroughness characteristic of the Northern clubs, the open reliability trial of the Ilkley M.C. and L.C. was carried to a successful conclusion on Saturday last.

Out of an entry of seventy-five and five light cars, sixty-eight actually started on the arduous run, which consisted of a series of severe gradients and rough surfaces, connected occasionally by more or less normal roads.

The first hill up to Keighley Gate is not sufficiently severe in gradient to worry the modern motor cycle, though two of the light cars found it to be beyond their powers. Onward then to Harden Bank, famous for the villainy of its surface and a couple of nasty corners. The drought was responsible for the fact that the surface was looser than usual below the rock outcrop, and the slight rainfall during the night and early morning did little to alleviate the trouble.

Light and Medium-weights Successful.

On the whole the performances were wonderfully good, and, as is usually the case on tricky hills, the failures were mostly amongst the high-powered (and high geared) solo machines.

Bradley (7-9 Indian) fell at the first corner, and after restarting failed at the second bend, but Fitton (8 Brough Superior), who fell at the same spot, got away well, and made a good climb. Slater (3½ Sunbeam) fell momentarily at the second corner, but was quickly away again. Gibbon (2½ Calthorpe) ran beside his mount, and Batty (6 Martinsyde sc.) and Walker (2½ Excelsior) both appeared to be suffering from clutch slip.

Of the more remarkable climbs, the 2½ New Hudsons ridden by Munday and Bourke, the Scotts ridden by Hill, Moorhouse, Clough, Guy, and Miss Dent, Shepherd (2½ Beaumont), Naylor (3½ Sunbeam), Palmer (3 Ivy), Bointon (2½

Appalling surface formed the chief difficulty of the Stake. F. W. Giles (7 A.J.S. sidecar) is here shown passing a less fortunate fellow competitor.

Coulson B), Walkington (2½ O.K.), and Hanson (3½ Norton) showed up best amongst the solos. The sidecar machines were good almost without exception, but Runsome (5 Lea-Francis sc.), Wilkinson (5-6 Rover sc.), C. P. Wood (3½ Scott sc.), and Wilkin (6 Martinsyde) were perhaps the best. Grange (6 Bradbury sc.) went up well, but appeared to be troubled with a slight miss, and the passenger of Stacey's Harley gave a notable display of unnecessary acrobatics. The best of the

three-wheelers were Ridley's New Hudson with 10 h.p. water-cooled M.A.G. engine, and Bracewell's Scott Sociable.

Park Rash.

Though there was plenty to be seen and achieved in the next fifty-six miles *via* Haworth, Sutton, Skipton, Bolton Bridge, Kex Gill, Yorkes Folly, Greenhow, and Grassington, Park Rash formed the next centre of public interest. Owing to the extraordinary loose state

F. E. Palmer (3 Ivy) performing the usual balancing feat on Park Rash. Every solo rider had to do likewise, in order to get over the boulder-strewn-surface

Miss Dent, on a Scott, made a very plucky attempt on Park Rash, but found the surface too great a handicap.

of the surface, which was considerably worse than it was in the 1920 Six Days, failures were not penalised but bonus marks were awarded for specially meritorious climbs. On reaching Kettlewell the morning mists were dispersed, and the sun shone on a considerable number of spectators who gathered to watch the test. Amongst the early arrivals Bradley (7-9 Indian) enlivened the proceedings by hitting one of the cross gulleys at high speed; his machine leapt high in the air and crashed, and after struggling to the summit he retired. It would be idle to give a list of failures, since so few made clean ascents, even Geoffrey Hill (3½ Scott), who made the best solo ascent, took his feet off the rests, though it is doubtful if he ever touched the ground. The little New Hudsons again distinguished themselves and reached the top with the aid of a certain amount of foot slogging. Shepherd (2½ Beaumont) just kept going. Parker (3½ Sunbeam) made a clean ascent, though an anxious official attempted to assist him. Vickers (3½ Norton) managed to get up. Batten (3½ Brough) received slight help on the lower slopes, but climbed steadily and well. Whalley (3½ Sunbeam) made a very good effort. Palmer (3 Ivy), and Clapham, on his T.T. Scott, both made fine ascents and only used their feet for steadying. Backhouse (4 Triumph) made one of the best solo ascents, and Wheatley on a similar mount gained the summit without assistance. Bointon (2½ Coulson) was not assisted, though his wheel stopped momentarily. Jackson (3½ Norton) and Devey (4 Bradbury) made good attempts, but the former had slight assistance and the latter ended by hitting the wall. Of the passenger machines only Wilkinson (5-6 Rover sc.) and Giles (7 A.J.S. sc.) made clean ascents at the first attempt, and they deserve special credit. Giles's passenger even remained normally seated. C. P. Wood (3½ Scott sc.) tore off a rear sprocket at his first attempt, but descended the hill and borrowed a complete rear wheel from his brother's machine, and made a wonderful climb. H. Reed (8 Dot) received very little help. Bracewell's Scott Sociable arrived very late, having hit a wall in

C20

endeavouring to pass another competitor in a narrow lane.

At the lunch stop at Leyburn forty-two solo riders arrived out of forty-eight starters, fourteen out of fifteen sidecars finished, and only Waddington on a four-speed water-cooled Morgan was left to represent the five three-wheelers.

The Afternoon's Run.

After lunch solo and passenger machines followed different routes to Bowbridge, the former ascending the dreaded Summer Lodge, while the latter made a detour *via* Appletree Thwaite. Summer Lodge, with its carpet of loose stones, was a repetition of Park Rash, and, under the prevailing

circumstances, there was some argument as to which was the more difficult ascent.

Summer Lodge is the steeper of the two hills. No single instance was recorded of a really clean ascent with feet on the rests, but the following were perhaps the best performers on the hill: Boston (3½ Scott), Fincher (4 Triumph), Hawkes (2½ Excelsior), Hollyoak (2½ Federation), Fitton (8 Brough Superior), Bourke (2½ New Hudson), Moorhouse (3½ Scott), Clough (3½ Scott), Palmer (3 Ivy), Backhouse (4 Triumph), Johnson (3½ Sunbeam), Stanfield (3½ Scott), Horsley (2½ New Imperial), Bointon (2½ Coulson B.), Wheatley (4 Triumph), and Devey (4 Bradbury).

Jackson (3½ Norton) made a gallant attempt to keep his feet on the rests, but fell, though he kept his engine going, and, finally, got up. Miss Dent (Scott) had trouble on the corner, but made a fine ascent of the top part of the hill.

Kidstones and the Stake.

Kidstone's Pass is a good preliminary to the Stake, and helps to warm up the engines before the hardest of the work. However, the majority of the weaklings were now out of the running, and the Stake, though severe, does not compare with Park Rash or Summer Lodge. Miss Dent, who was pluckily continuing after several falls, took the first corner on the wrong side, and failed. Harry Reed attributed a stop to magneto trouble, and Gibbon (2½ Calthorpe) ran up. Except for these few, there was little trouble, and some of the big sidecar machines took the opportunity of showing what they could do, Watson (Harley-Davidson sc.) making a particularly fast ascent. There followed Semmerwater and Countersett Hills and then, on the hill leading out of Gayle, a flexibility test on unusual lines.

This picture conveys a good impression of what competitors had to contend with on the Stake, and shows C. P. Wood (3½ Scott sidecar) crossing the watercourse on the first "ledge" of the hill.

Amidst Yorkshire Hills.—

After a warning notice, placed 100 yards before the start, came the 150 yards fast section, followed by fifty yards of slow. The test took place on a gradient of 1 in 10, and introduced an interesting deceleration factor.

On the homeward journey we noticed a certain amount of tyre trouble in the neighbourhood of Kettlewell, and then came a most impressive thunderstorm, which precluded all other interests than those of attempting to keep dry. Thus

RESULTS of the open hill-climb, which was held at Catsash, near Newport (Mon.), on July 9th, are as follows. As will be seen, it was a field day for Nortons, which were ridden into first place in every class in which they were entered. Fastest time of the day in both solo and sidecar classes was made by G. W. Walker (3½ Norton).

EVENT 1 (Open), up to 250 c.c.—On time: 1, D. G. Prentice (2½ New Imperial); 2, J. V. Prestwich (2½ Diamond-Jap); 3, J. Lidstone (2½ James). On formula: 1, J. V. Prestwich (2½ Diamond-Jap).

EVENT 2 (South Wales Centre), up to 250 c.c.—On time: 1, W. L. J. Davies (2½ New Hudson); 2, H. Church (2½ Velocette). On formula: 1, H. Davies (2½ New Hudson).

EVENT 3 (Associated Clubs), up to 250 c.c.—On time: 1, H. Church (2½ Velocette); 2, W. L. J. Davies (2½ New Hudson). On formula: 1, H. Davies (2½ New Hudson).

EVENT 4 (Open), up to 300 c.c.—On time: 1, D. G. Prentice (2½ New Imperial); 2, J. V. Prestwich (2½ Diamond-Jap). On formula: 1, J. V. Prestwich (2½ Diamond-Jap).

EVENT 5 (South Wales Centre), up to 300 c.c.—On time: 1, H. Church (2½ Velocette).

EVENT 6 (Associated Clubs), up to 300 c.c.—On time: 1, R. Morel (2½ Levis). On formula: 1, H. Davies (2½ New Hudson).

EVENT 7 (Open), up to 350 c.c.—On time: 1, D. G. Prentice (2½ New Imperial); 2, H. Davies (2½ Cotton). On formula: 1, D. G. Prentice (2½ New Imperial).

EVENT 8 (South Wales Centre), up to 350 c.c.—On time: 1, W. L. J. Davies (2½ Cotton); 2, R.

Ware (2½ Coulson-B) and F. Buckner (2½ Douglas). On formula: 1, H. Davies (2½ Cotton-B).

EVENT 9 (Associated Clubs), up to 350 c.c.—On time: 1, F. J. B. Jones (2½ Douglas); 2, W. L. J. Davies (2½ Cotton). On formula: 1, F. J. B. Jones (2½ Douglas).

EVENT 10 (Open), up to 500 c.c.—On time: 1, G. W. Walker (3½ Norton); 2, C. Sgonina (3½ Triumph); 3, A. Lindsay (3½ Norton). On formula: 1, W. L. J. Davies (3 A.B.C.).

EVENT 11 (South Wales Centre), up to 500 c.c.—On time: 1, A. Lindsay (3½ Norton); 2, J. Thomas (3½ Norton); 3, R. H. Jenks (3½ Norton). On formula: 1, J. Marsh (3 A.B.C.).

EVENT 12 (Associated Clubs), up to 500 c.c.—On time: 1, A. Lindsay (3½ Norton); 2, R. H. Jenks (3½ Norton); 3, J. Thomas (3½ Norton). On formula: 1, H. Davies (3 A.B.C.); 2, W. L. J. Davies (3 A.B.C.).

EVENT 13 (Open), up to 750 c.c.—On time: 1, G. W. Walker (3½ Norton); 2, C. Sgonina (3½ Triumph). On formula: 1, C. Sgonina (3½ Triumph).

EVENT 14 (South Wales Centre), up to 750 c.c.—On time: 1, J. Thomas (3½ Norton); 2, W. L. Thomas (3 Sunbeam); 3, J. Parker (3½ Sunbeam). On formula: 1, D. G. Prentice (2½ New Imperial); 2, H. Davies (3 A.B.C.).

EVENT 15 (Associated Clubs), up to 750 c.c.—On time: 1, J. Thomas (3½ Norton); 2, R. H. Jenks (3½ Norton); 3, W. L. Thomas (3½ Sunbeam). On formula: 1, H. Davies (3 A.B.C.).

EVENT 16 (Open), unlimited.—On time: 1, G. W. Walker (3½ Norton) and C. Sgonina (3½ Triumph); 3, A. Lindsay (3½ Norton). On formula: 1, D. G. Prentice (2½ New Imperial).

EVENT 17 (South Wales Centre), unlimited.—On time: 1, J. Thomas (3½ Norton); 2, H. Davies (8 Brough Superior); 3, W. L. Thomas (3½ Sunbeam).

T.T. MACHINES IN MIDLAND HILL-CLIMB.

EXCEPTIONALLY fine weather attended the thirteenth annual hill-climb of the Birmingham M.C.C., held on Camden Hill, Ilmington, on Saturday. This hill has a very good surface with the exception of a slight rut on the extreme left of the first right hand bend. It is about five-eighths of a mile long and has a maximum gradient of approximately 1 in 8.

Amongst the various entrants were H. R. Davies, the T.T. winner on his o.h.v. A.J.S., and T. C. Greenwood, on his special long stroke 4½ h.p. Sunbeam, with a capacity of 599 c.c. The B.S.A. T.T. model was also competing, together with several other T.T. mounts.

In the first class H. R. Davies beat his follower up, T. C. Greenwood, by the margin of ½ s. The spectators on the corner were really astounded at the excellent cornering. H. R. Davies, never attempted to cut out at all, taking the bend "all out." In the next class, however, T. C. Greenwood reversed the positions, winning by ½ s.

Amateur riders put up very good performances in their class.

In the last class some excellent speeds were recorded. Up till now H. R. Davies had recorded the fastest time, but T. C. Greenwood beat all his previous attempts by 2s., thus winning his class and also making the fastest time of the day.

R. E. Pugh is worthy of special mention for his performance. He climbed the hill in 38s. with his 2½ h.p. Levis, and the fastest time of the day was only a matter of 5½ s. less.

Full results on time follow:

CLASS 6—750 c.c. Sidecars (open): 1, H. R. Davies (2½ A.J.S.), 43.4s.; 2, T. C. Greenwood (4½ Sunbeam sc.), 44.2s.

CLASS 8—Unlimited Sidecars (open): 1, T. C. Greenwood (4½ Sunbeam sc.), 42.6s.; 2, H. R. Davies (2½ A.J.S. sc.), 43.4s.

CLASS 9—250 c.c. Solo (amateur): 1, W. F. Smith (2½ Hobart), 45.2s.; 2, A. W. Thrush (2½ Levis) and W. J. Lord (2½ Hobart), 45.8s., tied.

CLASS 10—250 c.c. Solo (open): 1, R. E. Pugh (2½ Levis), 38s.; 2, W. F. Smith (2½ Hobart), 43.8s.; 3, W. J. Lord (2½ Hobart), 47.8s.

CLASS 11—350 c.c. Solo (amateur): 1, G. Povey (2½ Massey-Arran), 41.4s.; 2, A. W. Thrush (2½ Levis), 43s.; 3, W. F. Smith (2½ Hobart), 44s.

CLASS 12—350 c.c. Solo (open): 1, H. R. Davies (2½ A.J.S.), 35.8s.; 2, R. E. Pugh (2½ Levis), 37.4s.; 3, G. Povey (2½ Massey-Arran), 42.8s.

CLASS 13—499 c.c. Solo (amateur): 1, A. E. Phillips (3½ Norton), 40s.; 2, A. W. Thrush (3½ Sunbeam), 40.2s.; 3, T. Morton (3½ Norton), 41.8s.

CLASS 14—499 c.c. Solo (open): 1, H. R. Davies (2½ A.J.S.), 35s.; 2, G. A. Strange (3½ James) and A. E. Phillips (3½ B.S.A.), 37s., tied.

CLASS 15—600 c.c. Solo (amateur): 1, A. W. Thrush (3½ Sunbeam), 39.2s.; 2, A. E. Phillips (3½ Norton), 41s.; 3, T. Morton (3½ Norton), 41.4s.

CLASS 16—600 c.c. Solo (open): 1, H. R. Davies (2½ A.J.S.), 34.8s.; 2, T. C. Greenwood (4½ Sunbeam), 36s.; 3, H. Pelly (3½ Norton), 37s.

CLASS 17—750 c.c. Solo (amateur): 1, A. W. Thrush (3½ Sunbeam), 40s.; 2, C. Fisher (3½ James), 45s.; 3, L. E. Cox (3½ Scott) and L. D. Cuxson (3½ Sunbeam), 55s., tied.

CLASS 18—750 c.c. Solo (open): 1, H. R. Davies (2½ A.J.S.), 35s.; 2, T. C. Greenwood (4½ Sunbeam), 35.8s.; 3, G. A. Strange (3½ James), 36.8s.

Special Awards.

THE ILKLEY TROPHY (best individual performance).—F. W. Giles (7 A.J.S. sc.).

THE SCOTT TROPHY (best solo performance).—E. H. Wheatley (4 Triumph).

THE PALMER TROPHY (best passenger motor cycle performance).—H. Pattinson (8 New Imperial sc.).

THE OLAI TROPHY (best amateur performance).—J. R. Wilkinson (5-6 Rover sc.).

THE TRIUMPH TROPHY (best performance by trade rider).—W. Backhouse (4 Triumph).

THE WATSON TROPHY (best performance by 1,000 c.c. motor cycle).—R. A. Stacey (7-9 Harley sc.).

THE TEAM TROPHY.—The Leeds Motor Union, R. Horsley (2½ New Imperial), W. Clayton Russell (4 Norton sc.), and H. Pattinson (8 New Imperial sc.).

EVENT 18 (Associated Clubs), unlimited.—On time: 1, J. Thomas (3½ Norton); 2, A. Lindsay (3½ Norton); 3, H. Davies (8 Brough Superior). On formula: 1, L. C. Ramsay (3 A.B.C.).

EVENT 22 (Open), sidecars up to 500 c.c.—On time: 1, G. W. Walker (3½ Norton sc.). On formula: 1, G. W. Walker (3½ Norton sc.).

EVENT 23 (South Wales Centre), sidecars up to 500 c.c.—On time: 1, R. H. Jenks (3½ Norton sc.).

EVENT 24 (Associated Clubs), sidecars up to 500 c.c.—On time: 1, J. Thomas (3½ Norton sc.).

EVENT 25 (Open), sidecars up to 750 c.c.—On time: 1, G. W. Walker (3½ Norton sc.). On formula: 1, G. W. Walker (3½ Norton sc.).

EVENT 26 (South Wales Centre), sidecars up to 750 c.c.—On time: 1, J. Thomas (3½ Norton sc.). On formula: 1, H. Davies (3 A.B.C. sc.).

EVENT 27 (Associated Clubs), sidecars up to 750 c.c.—On time: 1, J. Thomas (3½ Norton sc.). On formula: 1, H. Davies (3 A.B.C. sc.).

EVENT 28 (Open), sidecars unlimited.—On time: 1, G. W. Walker (3½ Norton sc.); 2, H. Davies (8 Brough Superior sc.). On formula: 1, G. W. Walker (3½ Norton sc.).

EVENT 29 (South Wales Centre), sidecars unlimited.—On time: 1, J. Thomas (3½ Norton sc.); 2, H. Davies (8 Brough Superior sc.).

EVENT 30 (Associated Clubs), sidecars unlimited.—On time: 1, J. Thomas (3½ Norton sc.); 2, A. Thom (7-9 Harley-Davidson sc.).

EVENT 31 (Open), cycle cars.—On time: 1, W. L. J. Davies (10 Morgan). On formula: 1, W. L. J. Davies (10 Morgan).

EVENT 32 (South Wales Centre), cycle cars.—On time: 1, W. L. J. Davies (10 Morgan). On formula: 1, W. L. J. Davies (10 Morgan); 2, J. G. Winter (—).

EVENT 33 (Associated Clubs), cycle cars.—On time: 1, C. V. Wood (10 J.A.P.); 2, W. L. J. Davies (10 Morgan). On formula: 1, H. Davies (10 Morgan); 2, J. G. Winter (—).

CLASS 19—Unlimited Solo (amateur): 1, A. W. Thrush (3½ Sunbeam), 39.8s.; 2, L. E. Cox (3½ Scott), 45s.; 3, R. E. Newcombe (3½ Ariel), 47s.

CLASS 20—Unlimited Solo (open): 1, T. C. Greenwood (4½ Sunbeam), 32.8s.; 2, H. R. Davies (2½ A.J.S.), 34.8s.; 3, G. A. Strange (3½ James), 36.8s.

Fastest time of the day.—T. C. Greenwood (4½ Sunbeam), 32.8s.

Fastest amateur of the day.—A. W. Thrush (3½ Sunbeam), 39.2s.

A HUMBER TRIAL.

THE annual reliability trial for employees of Humber Ltd., held last Saturday, produced sixty-four entries. On the outward trip to Oxford, a "new" climb past a quarry leading to Avon Dassett was included, and most competitors got up well, including the large fleet of riders of 4½ h.p. flat twin Humbers. Only three failed to check in at Oxford, where lunch was taken at the Buol Restaurant, presided over by Lt.-Col. J. A. Cole, O.B.E., who was supported by the Mayor and Chief Constable of Oxford.

The homeward run was via Woodstock and Sunning Hill, the latter gradient assisting in reducing the field, since several failed, two due to gear troubles. Punctures also weeded out three riders, leaving barely fifty to finish a very enjoyable trial. The cup winner should be known in a few days, when the various checking sheets have been examined.

CURRENT CHAT (Continued from p. 76).

Death of a Pioneer Motor Cyclist.

It is with great regret that we have to announce the death of one of the founders of the Motor Cycling Club, Mr. S. H. Fry. He was a member of the M.C.C. Committee for many years, and worked hard in the interests of the club. He had a ready wit, and his speeches at the club's earlier annual dinners were always a delight, and provided much merriment. It is to such pioneers as the late Mr. Fry that younger participants in the pastime owe far more than they can realise, and it is due to their endurance on the old and uncomfortable mounts of 1901 and later that the modern motor cycle has reached the perfection it has now obtained.

The late Mr. S. H. Fry, one of the founders of the Motor Cycling Club.

Mr. Fry was a good sportsman and a true amateur, as he rode for the sheer love of the pastime, and was in no way connected with the motor cycle trade.

His end was particularly sad, as he passed away just after he had found a delightful cottage in Surrey, in which he had hoped to spend a well-earned respite from the business from which he had just retired. In company with many pioneer motor cyclists we extend our sincere sympathy to his widow.

The Scottish Trials.

In this issue will be found a fully illustrated description of the Scottish Trials, together with a list of official awards.

Bradford-London-Bradford

A North-country classic, the annual Bradford-London-Bradford Reliability Trial, takes place this week-end.

The Two Hour Record.

Owing to a misapprehension, F. W. Dixon (7-9 Harley-Davidson) was stated on page 59 of our last issue to have se-

cured the two-hour record. This record, however, still remains in the possession of H. Le Vack, who holds all the 1,000 c.c. figures up to seven hours, with the exception of the 200 miles.

The 1922 T.T.

The A.C.U. has already accepted six entries for next year's Tourist Trophy races.

Speed Trials.

On Saturday next the East Midland Centre A.C.U. holds its open speed trials at Clipstone Park, near Nottingham.

NEXT SUNDAY'S GRAND PRIX RACE.

ON Sunday the classic French road race at Le Mans will be decided, and, as will be seen from the list given below, the entries are fairly representative. The race may be said to be between Great Britain, America, and France—the same countries which were to be represented in the car race on the following day. We understand, however, that the British car entries have been

withdrawn, hence the motor cycle race promises to be the more interesting. In our last week's issue, we gave details of the course, which is a triangular circuit of a little over ten miles, to be covered twenty times. A report of the race will appear in next week's issue of *The Motor Cycle*, while *The Autocar* will contain a description of the car event, in which very high speeds are anticipated.

CLUB EVENTS AT BROOKLANDS.

A VERY representative entry, which included several well known riders and machines, composed the programme of the first annual race meeting of the Ealing and District M.C.C., held at Brooklands track on Saturday last.

Temple (7-9 Harley-Davidson), the winner of the club championship, rode a wonderful race, winning at 91.10 m.p.h., his fastest lap being 94.07 m.p.h.

FIRST RACE (350 c.c.).—1. A. G. Millar (2½ Martin, 48s. start); 2. S. E. Longman (2½ Wooler, 1m. 15s.); 3. H. J. Line (2½ Martin, 48s.). Winner's speed, 57.48 m.p.h.

SECOND RACE (500 c.c.).—1. W. H. Linnett (3 A.B.C., 27s. start); 2. W. L. Gard (3½ Norton, 1m. 3s.); 3. P. A. Longman (3½ Ariel, 51s.). Winner's speed, 67.75 m.p.h.

THIRD RACE (1,000 c.c.).—1. G. J. Read (8 Enfield, 1m. 54s. start); 2. J. C. Watson (7-9 Harley-Davidson, 2m. 30s.); 3. C. F. Temple (7-9 Harley-Davidson, scr.). Winner's speed, 69.10 m.p.h.

FOURTH RACE.—1. G. G. Fowler (2½ Martin, 2m. start); 2. P. A. Marshall (3 A.B.C., 57s.); 3. W. G. Boyer (3½ Norton, 42s.). Winner's speed, 50.8 m.p.h.

SIXTH RACE (TEAM).—Ealing and District M.C.C. winners on time: A. G. Millar (Martin sc.), C. G. Pullin (Douglas), C. F. Temple (7-9 Harley-Davidson), and S. E. Longman (7-9 Harley-Davidson).

SEVENTH RACE (1,000 c.c., Sidecars).—1. S. E. Longman (7-9 Harley-Davidson sc., 51s. start); 2. G. de Lissa (8 Motosacoche sc., 30s.); 3. R. Dequin (8 Zenith sc., 1m. 24s.). Winner's speed, 63.20 m.p.h.

EALING AND DISTRICT CLUB CHAMPIONSHIP RACE.—1. C. F. Temple (7-9 Harley-Davidson, scr.); 2. C. G. Pullin (Douglas, 2m. 25s.); 3. O. de Lissa (8 Motosacoche sc., 2m. 50s.). Winner's speed, 91.10 m.p.h.

The start of the handicap for sidecars and three-wheelers with engines not exceeding 1,100 c.c. This race was won by S. E. Longman (Harley-Davidson). W. H. Emery (New Imperial) is seen in the foreground.

CLUB NEWS

On one of the best-known test hills in Yorkshire—Sutton Bank, on the Hambleton hills. Competitors in the recent Yorkshire Centre team trial making light of this once formidable incline.

Aberdare and District M.C.C.

The final results of the second annual trial for the Iltyd Williams Cup are as follows:

1. A. Cranch (3½ Rover sc.), Neath and District M.C.C., 195 marks; 2. T. E. Richards (8 Brough Superior), Bnith Wells M.C.C., 193 marks; 3. W. Boyns (4 Triumph), Aberdare M.C.C., 199 marks (also winner of the Iltyd Williams cup); 4. G. T. Bishop (3½ Sunbeam) and I. Parker (8.7 G.N.), Aberdare M.C.C., 189 marks each.

A remarkably good performance was made by E. Colburn on a single-geared Levis. The maximum number of marks obtainable was 200.

Yorkshire Centre A.C.U.

Organised by the Bradford M.C. and L.C.C., the team trial of the Yorkshire Centre (A.C.U.) was held at the beginning of July, over a route which included Sutton Bank and the difficult country in the Pateley Bridge district. Fifteen teams of four (two solo and two passenger) were entered and all started. The results are as follows:

Haggas Shield, gold medals to each rider, and title of champion Yorkshire team 1921: Bradford M.C. and L.C. "B" team, consisting of J. C. Neilson (Harley-Davidson sc.), W. Snowden (Matchless sc.), A. R. Naylor (Sunbeam), and C. B. Haigh (Scott) marks lost, 51; Silver medals: Leeds and District M.C.C. "J" team—W. T. Brand (Triumph), R. J. Brown (Norton), S. Jepson (A.J.S. sc.), and T. Hardy (Engfield sc.); marks lost, 33. Bronze medals: Bradford Gipsy M.C.C. "D" team—P. Shaw (P. and M. sc.), A. Haigh (Harley-Davidson sc.), H. Barker (Triumph), and R. Clay (B.S.A.); marks lost, 59.

The order of merit of the remaining teams was:

4. Wakefield "H" team; 5. Bradford M.C.C. "T"; 6. Sheffield and Hallamshire "S"; 7. Wakefield "K"; 8. Harrogate "A"; 9. Harrogate "P"; 10. Bradford Gipsy "L"; 11. Ilkley "W"; 12. Ilkley "M"; 13. Leeds and District "E"; 14. Ilkley "C"; 15. York "U" (retired).

A special feature of the event was that a few days after it was held a complete duplicate of the check sheet was forwarded to every competitor, thus showing exactly how many marks were lost by each club and where.

Week-end Club Events.

- July 21.—Berwick and District M.C. Flexibility Hill-climb.
- July 23.—Western Centre, A.C.U. Team Trial.
- July 23.—S.E. Centre, A.C.U. Speed Trials at Brooklands.
- July 23.—Loughborough and District M.C.C. A.C.U. Speed Trials.
- July 23.—Kidderminster M.C.C. Freak Hill-climb.
- July 23.—Taunton and District M.C. and L.C.C. and Exeter M.C. and J.C.U. Joint Reliability Trial.
- July 23.—York and District M.C. Social Run to Kirkham Abbey.
- July 23.—Worcester and District M.C.C. One Day Trial.
- July 23.—Luton and South Beds. A.C. Gymkhana.
- July 23.—Bristol M.C.C. Gymkhana.
- July 23.—Sheffield and Hollandshe M.C. and L.C.C. Reliability Run to Wates.
- July 23.—Surrey M.C.C. Crow Cup Trial.
- July 23.—Glasgow M.C.C. Hill-climb.
- July 23.—Liverpool M.C. Twenty-four Hour Trial.
- July 23.—Wolverhampton Auto Nomads. Club Run to Beadley and Arley.
- July 23.—East Midland Centre A.C.U. Speed Trials at Cliftonstone.
- July 23.—Harley-Davidson M.C.C. Run to Eastbourne.
- July 23.—Stamford M.C.C. Hill-climb.
- July 23.—Newcastle and District M.C. Team Trial.
- July 23.—Sheffield M.C.C. Fishing Match.
- July 23.—Harrogate and District M.C.C. Captain's Competition.
- July 23.—Brighton and Hove M.C.C. Hewett Trophy Reliability Trial.
- July 23.—Burton and District M.C.C. Club Run to Monsal Dale.
- July 23.—Woolwich, Plumstead, and District M.C. Club Run to Ightham.
- July 23.—Coventry Triangle M.C. Club Run to Oxford.
- July 23.—Haltz and District M.C.C. Reliability Trial.
- July 23.—Central London M.C.C. Club Run to Wrotham.
- July 23.—Leeds M.U. Club Run to Bridlington.
- July 23.—Berwick and District M.C. Team Trial to Edinburgh.
- July 23.—Barrow and District M.C. Petrol consumption Test.
- July 23.—Canterbury and District M.C.C. Club Run to Margate.
- July 23.—Ivy M.C.C. (Wolverhampton). Stourport.
- July 23.—Bridgewater and District M.C. and L.C.C. Carver Cup Trial.
- July 23.—Burton and District M.C.C. Run to Manifold Valley.
- July 23.—Doncaster and District M.C.C. Rally.
- July 23.—Canterbury and Dist. M.C.C. Speed Trial.

A Section devoted to Club Announcements will be found on Supp. xlv.

Peterborough and Stamford M.C.C.

A joint hill-climb was held at Tixover, near Duddington, on July 10th. There were several very fast machines present, and the events were run off without unnecessary pauses. Results:

250 c.c., FLYING START.—G. Brown (2¼ Massey-Arran), 19s.; J. Belton (2¼ Levis), 25½s.; A. Mason (2¼ Levis), 27½s.

250 c.c., STANDING START.—G. Brown (2¼ Massey-Arran), 25½s.; A. Mason (2¼ Levis), 31½s.; J. Belton (2¼ Levis), 32½s.

UNDER 350 c.c., STANDING START.—G. Brown (2¼ Massey-Arran), 26s.; L. Moulds (2¼ Douglas), 29½s.; H. Cragg (2¼ Douglas), 31½s.

UNDER 350 c.c., FLYING START.—G. Brown (2¼ Massey-Arran), 20s.; L. Moulds (2¼ Douglas), 21½s.; H. Cragg (2¼ Douglas), 23s.

UNDER 500 c.c., STANDING START.—B. Stapleton (3½ Sunbeam), 21½s.; H. Ludlow (3½ Norton), 21½s.; A. Robinson (4 Triumph), 22½s.

UNLIMITED CAPACITY, STANDING START.—B. Stapleton (3½ Sunbeam), 21½s.; H. Ludlow (3½ Norton), 22s.; E. Vickers (3 A.B.C.), 24s.

UNLIMITED CAPACITY, FLYING START.—H. Ludlow (3½ Norton), 15½s.; B. Stapleton (3½ Sunbeam), 15½s.; S. A. Cook (4 Triumph), 17½s.

Bridgnorth and District M.C.C.

The following is a list of results of a hill-climb held at Copthorne on July 10th:

CLASS 1: TWO STROKES (Open).—1. L. Cooke (3 Ivy), 46½s.; 2. Miss Pickering (2¼ Velocette), 73½s.

CLASS 2: 350 c.c. (Amateurs, Club Members).—1. H. Edward (2¼ A.J.S.), 51½s.; 2. W. Williams (3½ Douglas), 57½s.

CLASS 3: 550 c.c. (Open).—1. H. F. Harris (2¼ A.J.S.), 36½s.; 2. L. Cooke (3 Ivy), 44½s.

CLASS 4: 500 c.c. (Amateurs, Club Members).—1. S. K. Ridley (3½ Norton), 35s.; 2. A. Wood (3½ Norton), 37½s.

CLASS 5: 500 c.c. (Open).—1. F. Collard (3½ Rover), 35½s.; 2. H. F. Harris (2¼ A.J.S.), 35½s.

CLASS 6: 750 c.c. (Amateurs, Club Members).—1. S. K. Ridley (3½ Norton), 33½s.; 2. A. Wood (3½ Norton), 37½s.

CLASS 7: 750 c.c. (Open).—1. S. K. Ridley (3½ Norton), 33½s.; 2. H. F. Harris (2¼ A.J.S.), 35s.

CLASS 8: 1,000 c.c. (Open).—1. S. K. Ridley (3½ Norton), 32½s.; 2. A. Wood (8 Ivy), 36½s.

CLASS 9: 1,000 c.c. (Open).—1. S. K. Ridley (3½ Norton), 32½s.; 2. H. F. Harris (2¼ A.J.S.), 34½s.

CLASS 10: SIDECARS & THREE-WHEELERS (Open).—1. F. Collard (3½ Rover sc.), 50s.; 2. S. H. Ryder (8 Morgan), 57½s.

CLASS 11: CYCLE CARS (Open).—1. O. Williams (8 G.N.), 43s.; 2. C. Potts (8 G.N.), 56½s.; and D. Stewart (8 G.N.), 56½s., tied.

*Fastest time of the day.

Club News.—

Westoe M.C.C.

In the recent speed-judging competition over a measured mile, with speedometers covered, the winning machine was a Harley-Davidson sidecar outfit.

In the club's recent hill-climb at Muggleswick Common a Brooklands-engined Norton was first on time, with a Triumph second.

Wakefield and District M.C.C.

A reliability trial over a course of about 120 miles to Grassington and back was held on July 10th for the Club Trophy, which resulted in a win for G. Smith (4 Triumph), with H. Round (6.7 B.S.A. sc.) and G. R. Grundy (3½ Sunbeam) second and third respectively: unfortunately, several of the competitors went off the course.

Bristol M.C.C.

An evening trial was held on July 13th over a course of 17½ miles, which was covered twice; there were two observed hills in each circuit. The run was on non-stop times, and only thirteen finished out of twenty-five starters. The results were as follows:

1 (Bax Silver Cup), P. G. Chugg (6 James sc.), 5m. 15s. error; 2 (Beardmore Cup), F. A. Simpson (2½ Douglas), 6m. 15s. error; 3, E. L. Smith (3½ Triumph), 7m. 30s. error; 4, H. J. Hobbs (3½ Sunbeam sc.), 8m. 15s. error.

Surrey M.C.C.

The results of the hill-climb, which was held on July 9th, are as follows:

CLASSES I., II., and III.—Solo Machines.

	Time, secs.	Fig. of Merit.
1. T. G. Meeten (2½ O.K.-M.A.G.) ..	44.8	408
2. G. H. Williams (3½ T.T. Rover) ..	33.4	481
3. W. J. Collis (3½ Rudge) ..	37	402
4. P. M. Walters (3½ Sunbeam) ..	27.2	362
5. C. R. Jenkins (4 Triumph) ..	40.2	343
6. R. H. Dickinson (3½ T.T. Rover) ..	40.4	321
7. W. P. Wiltshire (8 J.A.P.) ..	32.4	375
8. Miss Bowers (4 Triumph) ..	44.6	271
9. H. H. Mallet (4½ B.S.A.) ..	48.6	265

CLASS IV.—Any Machine.

1. W. E. Willson (12 A.B.C.) ..	49.8	504
2. Mrs. Meeten (2½ O.K.-M.A.G.) ..	44.2	492
3. G. H. Williams (3½ Rover) ..	34	463
4. R. P. Robinson (10 Buckingham) ..	53.8	420
5. C. R. Jenkins (4 Triumph) ..	38	383
6. R. H. Dickinson (3½ Rover) ..	37.2	379
7. P. M. Walters (3½ Sunbeam) ..	37.2	362
8. W. J. Collis (3½ Rudge) ..	40.2	348
9. L. J. Mitchell (8 Zenith) ..	32.8	345
10. R. Graham (8.7 G.N.) ..	55.4	337
11. F. N. Edney (7-9 Indian sc.) ..	44.6	319
12. L. G. Willson (6 Bradbury sc.) ..	51.6	303

*CLASS V.—Passenger Machines

1. W. E. Willson (12 A.B.C.) ..	49.4	511
2. R. P. Robinson (10 Buckingham) ..	55	406
3. R. Graham (8.7 G.N.) ..	56.6	326
4. L. G. Willson (6 Bradbury sc.) ..	49.8	321
5. C. J. Feeny (8 Rover) ..	71.2	290
6. F. N. Edney (7-9 Indian sc.) ..	48.2	270

CLASS VI.—1914 or earlier Manufacture.

1. R. P. Robinson (10 Buckingham) ..	54.6	411
2. R. H. Dickinson (3½ T.T. Rover) ..	36	406
3. W. J. Collis (3½ Rudge) ..	30.6	351
4. L. D. Brown (3½ Triumph) ..	40.6	334
5. L. G. Willson (6 Bradbury sc.) ..	49	329
6. *W. P. Wiltshire (8 J.A.P.) ..	32.4	315
7. T. H. Broadhurst (3½ B.S.A.) ..	69.4	168

CLASS VII.—Standing Start, Stop, and Restart.

1. W. E. Willson (12 A.B.C.) ..	69.8	310
2. R. P. Robinson (10 Buckingham) ..	89.4	267
3. F. N. Edney (7-9 Indian sc.) ..	64	280
4. W. J. Collis (3½ Rudge) ..	63	163
5. C. R. Jenkins (4 Triumph) ..	64.2	159
6. L. G. Willson (6 Bradbury sc.) ..	61.8	—

*Fastest time of the day.

The formula used was:

$$\frac{\text{Total weight}}{\text{Cu. cap.} \times (\text{time} - .6 \text{ fastest time})}$$

Bury and District M.C.

The principal awards in the trial to Windermere on the 10th inst., were allotted as follows:

CLASS A.—A. Cunliffe (2½ Diamond).
CLASS B.—W. Ratcliffe (4 Triumph).
LIGHT CAR CLASS.—J. Pilling (Calthorpe).
Second-class awards were made to S. Graham (4 Norton), C. Major (7-9 Indian) and P. Crompton (4 Triumph).

Surrey M.C.C.

At the beginning of the month a new petrol consumption test formula, evolved by Mr. H. G. Mansell, hon. secretary of the Farnham Centre of the club, was applied to a number of the members' performances. The formula is as follows:

Figure of merit = m.p.g. $\times \sqrt{\text{weight} \times \left[\frac{\text{c.c.}}{2,000} + 1 \right]}$, and the undermentioned results were obtained. The figure of merit is added in parentheses, and the total weight and miles per gallon are also shown:

G. J. Heath (3½ Rudge), 345 lb., 212.0 m.p.g. (491).
H. Mansell (8-10 Zenith), 598 lb., 117.0 m.p.g. (428).
F. Edney (7-9 Indian sc.), 787 lb., 90.5 m.p.g. (378).
W. Wiltshire (8-10 Jap), 530 lb., 109.5 m.p.g. (376).
P. T. Mitchell (8 G.N.), 1,448 lb., 57.5 m.p.g. (338).
J. S. Mitchell (10 Horstman), 1,762 lb., 44.5 m.p.g. (327).
R. Graham (8 G.N.), 1,316 lb., 57.5 m.p.g. (322).
R. H. Dickinson (2½ Triumph), 277 lb., 162.0 m.p.g. (300).
T. Broadhurst (4½ B.S.A.), 420 lb., 112.0 m.p.g. (286).
C. Feeny (2½ Triumph), 277 lb., 150.5 m.p.g. (279).
G. Bowers (4 Triumph sc.), 666 lb., 82.6 m.p.g. (271).

Brighton and Hove M.C.C.

At a hill-climb held on July 10th, the principal events resolved themselves into duels between the Nortons and Sunbeams, there being no fewer than five dead heats. The hill was 420 yards long, average gradient 1 in 8, and the timing was electrical. The following are the results:

350 c.c.—Amateur: 1, G. Stacey (2½ Royal Ruby), 24s.; 2, W. H. Sheraton (2½ Conson-Bi), 28s.; 3, W. Goodrich (2½ Velocette), 29s.
General: 1, S. Dunford (2½ Royal Ruby), 22s.; 2, E. Jenner (2½ Royal Ruby), 24s.; 3, W. Goodrich (2½ Velocette), 28s.
600 c.c.—Amateur: 1, B. H. Wood (3½ Norton), 18s.; 2, A. B. Friend (3½ Sunbeam), 19s.; 3, L. Watts (4 Triumph) and A. Koehler (3½ Norton), 20s. General: 1, B. H. Wood (3½ Norton), 18s.; 2, W. H. Sheraton (3½ Norton), 18s.; 3, A. N. Hewett (3½ Sunbeam), and C. Volk (3½ Sunbeam), 19s.
UNLIMITED.—Amateur: 1, W. H. Sheraton (3½ Norton), 18s. (after two dead heats); 2, B. H. Wood, (3½ Norton), 18s.; 3, A. B. Friend (3½ Sunbeam), 19s. General: 1, C. Volk (3½ Sun-

beam), 18s. (after dead heat); 2, W. H. Sheraton (3½ Norton), 18s.; 3, B. H. Wood (3½ Norton), 18s.

UNLIMITED (Novices, on formula).—1, G. Stacey (2½ Royal Ruby), 23s.; 2, C. H. Kleinwort (3½ Norton), 22s.

SIDECARS (Unlimited, on formula).—1, A. N. Hewett (3½ Sunbeam sc.), 25s.; 2, S. Dunford (7-9 Harley-Davidson sc.), 23s.; 3, L. Watts (4 Triumph sc.), 31s.

Heaton Moor M.C.C.

On July 10th a reliability trial was held, in which the premier award was won by F. Slack (2½ Verus), with F. Bamford (3½ Sunbeam sc.) as runner-up. The course led through Cheshire and Derbyshire, finishing at Buxton. The weather and organisation being excellent, the run was highly successful.

Essex M.C.

In addition to the time and formula results (given in last week's issue) of the Westcliff Speed Trials, we have to record the following awards in the classes reserved for members of the two clubs organising the event (Essex M.C. and Essex County and Southend A.C.). As will be seen, J. V. Prestwich, on his two J.A.P.-engined mounts, was particularly fortunate. Summaries of the winners of the members' classes are as follows:

J. V. Prestwich (2½ Diamond-Jap) ..	7	firsts
J. V. Prestwich (2½ Massey-Arran-Jap) ..	9	"
S. M. Greening (2½ Francis-Barnet-Jap) ..	2	"
F. W. Applebee (2½ Levis) ..	2	"
G. Strange (3½ James) ..	4	"
H. Le Vack (Indian) ..	4	"
G. E. Stobart (5-6 James) ..	6	"
H. Petty (3½ Norton) ..	3	"
A. A. Prestwich (2½ Dot-Jap) ..	1	"
G. A. Vandervell (3½ Norton) ..	1	"
N. A. Lowe (2½ New Imperial) ..	2	"
E. A. Marshall (3 A.L.C.) ..	1	"
W. Vensey (8 Henderson) ..	1	"
S. Cronson (7-9 Harley-Davidson) ..	1	"
D. H. Davidson (7-9 Harley-Davidson) ..	1	"
J. Day (3½ Norton) ..	1	"

Worcester and District M.C.C.

A supper in honour of the club's members, H. R. Davies, E. Williams, and D. G. Prentice, who won the Senior, Junior, and 250 c.c. T.T. Races, was held this month at the headquarters, the Pack Horse Hotel, Worcester. H. F. Harris, one of the A.J.S. team, was also included amongst the guests. During the evening two cups were offered to the club, one by Mr. G. King, for the Junior T.T. winner, and one by Mr. G. Stevens to be competed for as the officials might decide.

Competitors in the Bury and District M.C. sporting trial to Windermere. The riders, whose mounts are a Sunbeam and Triumph sidecar are negotiating a hairpin bend on Tow Top.

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

LIGHTING FROM FLYWHEEL MAGNETO WANTED.

Is it possible to run an electric head lamp off a Villiers flywheel magneto?—C.L.

As at present arranged, it is inadvisable to attempt the running of a head lamp from the Villiers flywheel magneto.

RELIABILITY OF HUB GEARS.

I am considering purchasing a three-speed hub gear motor cycle, and am somewhat puzzled by the conflicting opinions current upon hub gears. Some recommend them, while others of my friends condemn them absolutely. As I do not understand the mechanism of a three-speed and clutch hub, I am unable to see for myself whether they are a sound engineering job or otherwise.—D.P.D.

When properly fitted in a frame made to withstand the stresses they set up, three-speed hubs are quite satisfactory, especially on solo machines. It is very necessary, however, that they should never be allowed to get out of adjustment, as the clearances between the parts are very small and damage is easily done. The manufacture of three-speed hub gears was discontinued in 1914, owing to the advent of countershaft gear boxes of less complex and more robust construction.

WHICH IS ADVANCE?

How does one tell, on any magneto, which way the timing lever works? In various makes of magnetos the timing levers not only project either side, but the armatures revolve clockwise and anti-clockwise, so that I cannot find any quick and ready test as to which way is "advance" and which "retard."—M.J.

You can solve the problem by examining the contact breaker of the magneto. Notice the direction in which the contact breaker rotates and the position of the cam in the contact breaker casing. Now operate the control lever and watch the direction in which the cam moves. When the cam moves in the opposite direction to the rotation of the contact breaker the ignition is being advanced, and when it moves in the same direction it is being retarded. Thus, the fully advanced position is that in which the cam has moved as far as possible in a direction opposite to (i.e., meeting) the direction of rotation of the contact breaker.

FOR A SINGLE-CYLINDER CYCLE CAR.

What maximum weight might a four-wheel miniature cycle car be if propelled by a new 4 h.p. Norton engine, air-cooled? Also is there any water-cooled cylinder that would suit this 79x100 mm. engine? What speed and consumption could I expect? Is there any engine-shaft gear on the market for chain drive, with two speeds forward and reverse? Also would a countershaft differential drive be preferable to a solid axle drive? What ratio should I require on top gear? What would be the tax on such a vehicle?—A.W.

A machine to be propelled by a 4 h.p. single-cylinder engine should not exceed 3 cwt. We do not know of any water-cooled cylinder which would suit the 79x100 mm. Norton engine; incidentally, the Norton engine of this size is rated at 3½ h.p., and not 4 h.p. With a machine of this type you might expect about 40 m.p.h., and a consumption of 70 to 80 m.p.g. So far as we know, there is no two-speed and reverse engine-shaft gear on the market. On a very small

machine, especially if the track is narrow, there is no absolute necessity to use a differential. Top gear ratio should be about 5½ to 1.

FITTING A CLUTCH.

Will you help me out of a little difficulty? I have at present a fixed gear machine, and find, owing to having lost a leg in the war, that at times I cannot exert enough of the "toddling" business to start away. I think I shall be able to fit a handle starter all right on a protruding shaft end of the timing gear. What I want to know is: (1.) Can a Triumph clutch wheel be fitted in the ordinary rear stays 6in. between the fork ends? (2.) What is the usual belt rim size of such clutch wheels, also belt line from spokes centre? (3.) Is there any plain countershaft clutch on the market?—W.P.

(1.) You would probably be able to get a Triumph hub clutch into the back forks of your machine if they are 6in. wide at the ends. (2.) About 18in. diameter. We cannot give the belt line definitely, as this varies somewhat. (3.) We do not know of any plain countershaft clutch.

Important Dates.

Sat., July 23rd—East Midland Centre A.C.U. Open Speed Trials

Sun., July 24th—

Motor Cycle Grand Prix Race in France.

Sat., July 30th—Newcastle and District M.C. Open Speed Trials.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat., Aug. 6th—B.M.C.R.C. Open Brooklands Meeting.

Sat. Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.

Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept 3rd—A.C.U. Six Days Trial.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Mon., Nov. 28th, to Sat., Dec 3rd—The Olympia Motor Cycle Show.

SILENCER IMPROVEMENTS.

The exhaust of my 1913 Triumph is very noisy, and I am desirous of quietening it down a bit, but the silencer is so awkwardly placed that it seems impossible to get it off for alteration without removing the magneto and platform and chain drive. A long fish-tail extension pipe is fitted, and when I purchased it the machine had also a small hole about ¼in. in diameter in the right-hand end plate; but I had this tapped and a plug screwed in, but it is still very noisy.—W.S.R.

You cannot remove the silencer of the 1913 Triumph without first taking off the magneto with its chain and case, as the silencer itself embodies the magneto platform. There is no reason why the machine should be excessively noisy, and we are inclined to believe that you are driving with the ignition too much retarded. No doubt the noise of the exhaust would be considerably reduced if you cut several transverse slots in the extension pipe with a hack-saw—about six or eight at 1in. intervals should be sufficient. These saw cuts will allow the pressure to escape more gradually.

CONVERTING TO COUNTERSHAFT DRIVE

I have a 1914 2½ h.p. New Hudson motor cycle with a hub gear which is very unsatisfactory. Can a countershaft gear be fitted to this type of frame?—T.H.E.

It would no doubt be possible to fit a countershaft gear to this machine, but, in order to do so, the rear stays would need rebuilding with a suitable bracket, another rear wheel would be required, and a special sprocket for the engine-shaft.

CARBURETTOR ADJUSTMENTS ON SINGLE-CYLINDER SIDECAR.

My 1914 Triumph outfit, fitted with three-speed hub gear, has a B. and B. carburettor with adjustable needle jet. As I was not getting power and good running, I fitted a standard No. 32 jet. Even with that size it lacked power, so I fitted a 34, which gives good running, but uses a lot of petrol. The strange thing to me is that it gives more power and good running after I lowered the petrol level about ⅜ in. With the needle jet I adjusted it to 1½ out of slide. Do you think I should get better results from this style of jet than the fixed standard? I could not get it to take much air, although the petrol consumption was high. (2.) What size of standard fixed jet should I use? Do you think 34 too large? (3.) Where should the petrol level be? (4.) What mileage should I get from this machine per gallon of petrol? (5.) The driving pulley is adjustable. I have it five revolutions of the engine to one of the back wheel. Do you think this is about correct? (6.) The dust cap of the carburettor is lost.—J.C.

(1.) You should get quite good results with the B. and B. needle variable jet; but there is no harm in running a fixed jet if you get the necessary amount of power. (2.) A 32 jet should be quite large enough, but there is nothing against using a 33 or 34. (3.) The level should be about ⅞ in. below the top of the jet. (4.) From 55 to 70 m.p.g., according to the condition of the engine. (5.) A 5 to 1 gear is quite in order on your machine. (6.) If the gauze from the air intake has been removed the carburation may be affected, and this possibly results in your having to use such a large jet.

EXPERIENCES WANTED.

"D.G." (Oxford).—Astra dynamo on Zenith machine.

"R.H." (Ludlow).—Balata or any belting other than rubber and canvas for Rudge Multi.

RECOMMENDED ROUTES.

STOCKPORT TO OAKAMoor.—F.B.

Stockport, Macclesfield, Bosley, Harpens Gate, Leek, Bradnop, Oakamoor. Approximately 26½ miles.

OXFORD TO NORTHAMPTON.—G.W.

Oxford, Gosford, Weston-on-the-Green, Middleton Stony, Baynard's Green, Brackley, Towcester, Blisworth, Northampton. Approximately 41 miles.

BIRMINGHAM TO ISLINGTON.—J.G.

Birmingham, Stonebridge, Coventry, Dunchurch, Daventry, Weedon, Towcester, Stony Stratford, Fenny Stratford, Dunstable, Redbourn, St. Albans, Barnet, Tally Ho Corner, East Finchley, Highgate, Holloway Road, Islington. Approximately 105½ miles.

COWES TO CHATHAM.—R.A.H.

Cowes, Newport, Ryde, Portsmouth, Cosham, Horndean, Petersfield, Liphook, Hindhead, Milford, Godalming, Guildford, Merrow, East Clandon, East Horsley, Effingham, Great Bookham, Leatherhead, Swan Hotel, Ashted, Epsom, Ewell, Cheam, Sutton, Wallington, Waddon Station, Addington, West Wickham Common, Hayes Common, Locks Bottom, Orpington Station, St. Mary Cray, Bexley, Crayford, Dartford, Gravesend, Rochester, Chatham. Approximately 112½ miles.

WAKEFIELD TO NORWICH.—A.E.L.

Wakefield, Doncaster, Bawtry, Barnby Moor, Retford, Tuxford, Newark, Grantham, Threkingham, Donington, Quadding, Gosberton, Sutterton, Fosdyke, Holbeach, Long Sutton, Sutton Bridge, Terrington St. Clements, King's Lynn, Hardwick Corner, Middleton, East Winch, West Bilney, Narborough, Swaffham, (edge of) Necton, (edge of) Wendling, Scarning, East Dereham, Hockering, Honingham, Easton, Norwich. Approximately 172 miles.

More Price Reductions.

N.U.T. models, now made by Hugh Mason and Co., Ltd., Newcastle-on-Tyne, have been reduced in price to £110 for the 3½ h.p. type, and £120 for the 5 h.p. model.

The single-gear O.K. two-stroke is now thirty-eight guineas.

A Sheffield Production

The Nesthill speedometer lamp recently described in our pages is made by E. H. Hill, Ltd., of 56, Broomhall Street, Sheffield (not Birmingham, as previously quoted).

Triumph Successes on the Continent.

In the Circuit del Pino "Gran Premio Italia," of 225½ kiloms., a Triumph gained first position in the 500 c.c. class. It was the only machine of this make entered, and was ridden by Mr. Piero Opassi. On the other hand, in the Liège-Paris-Liège reliability trial six Triumphs started and six finished, one gaining second place.

Pride of Ownership.

The average motor cyclist's pride in the performance and record of his machine is well exemplified in a letter we have before us from D. S. Parsons, of the Essex Club, to whom we recently referred as having retired from the M.C.C. team trials. It transpires that Parsons did not ride his Matchless according to programme, but gave up his number to another competitor.

Racing Machines for the Public.

New Imperial T.T. three-speed models, similar to those which performed so well in the T.T. (winning *The Motor Cycle* cup) and in the Brooklands 500 miles race, will shortly be available in limited quantities. The prices are: 250 c.c. model, £93; and 350 c.c., £96.

Another T.T. machine of which replicas may be obtained is the 350 c.c. Dot; price £98. It is claimed for this model that it was the first standard machine home in the Junior T.T.

For Club Secretaries to Note.

Half the prizes won by competition riders have little value from a utilitarian point of view, and this fact is now coming to be appreciated by club secretaries. Last year the Liverpool Club started the fashion of presenting spoons bearing the club insignia. The M.C.C. has offered links in lieu of medals, and the A.C.U. centres are presenting similarly useful souvenirs.

In a recent issue we illustrated the sleeve links which were presented by the A.C.U. at the close of the T.T. races to certain of the officials who rendered yeoman service in the organisation. These links were produced by the Birmingham Medal Co., of 58, Vittoria Street, Birmingham, and this firm specialises in the supply of similar attractive articles suitable for club awards.

J. Beck (8 Royal Ruby sidecar) on one of the steepest portions of Amulree in the Scottish Six Days Trials. Observe the passenger's effort to keep the sidecar wheel down.

*The Standard Sparking
Plug of the World*

Why AC Sparking Plugs are More Efficient

AC Types are: AC Titan, AC
Carbon-Proof, and ACTwo-Piece

AC Sparking Plug Co., Ltd.,
1-4, Thurloe Place, London, S.W.7

More than any other feature, the high quality of AC porcelains contribute to the efficiency of AC Plugs in every type of service.

Exceptionally massive and strong, AC porcelains not only resist breakage, but possess remarkable insulating properties which prevent electrical leakage and short circuits. You can get these superior plugs at leading dealers and garages everywhere. Made for all threads in metric and inch sizes. Price 5/-

IT IS RUMOURED

That the Cox "Atmos" Single Lever Carburetters used in competitions are specially made and different from those supplied in the usual course of trade.

We therefore beg to state that every Cox "Atmos" Carburetter, whether supplied by a motor manufacturer, agent, or obtained from us direct, whether for use in motor cycle, motor car, or motor boat racing or competitions of any nature, are all standard productions taken from bulk stock, and no variation is made between those used in competitions and for ordinary touring.

THE RAPID SUCCESS OF THE COX "ATMOS"

is due to its delivery of a correct mixture at all speeds over the full throttle range, thereby keeping the engine cool, clean, and in a condition to give off full power for a prolonged period. Hence the wonderful acceleration, flexibility and power developed. The Cox "Atmos" also enables the rider to tune his engine to the last degree.

BROOKLANDS, 9th JULY, 1921:

Major S. R. Axford, riding a 2½ l.p. A.J.S. fitted with a Cox "Atmos," won the scratch race and

B.M.T. Oils banish engine trouble.

MOST engine troubles are directly traceable to faulty lubrication. Your motor cycle will run better and last longer if you use B.M.T. oils for lubrication. Send for B.M.T. Booklet and Price List—it will show you the right grade of oil to use for your motor cycle.

A Gold Medallist in the London-Edinburgh Trial writes: "I have much pleasure in reporting the very satisfactory service afforded by B.M.T. oil on my 4 h.p. Triumph Motor Cycle in the above trial . . . The return journey (430 miles) was undertaken without a single hitch in two days, and, during the second day, 50 m.p.h. was maintained for some miles on end, an average of well over 25 m.p.h. being put up for 126 miles. This speaks well for the oil, as it was a hot and dusty day."

ENGLEBERT TYRES

Super-reinforced

The cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is beat in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "beat out of them."

ACTUALLY AT HALF PRICE

"DAYBEAM" Electric Solo Set

The Headlamp supplied with this set is our 5in. Daybeam, a very powerful light-giver. The brackets are of exceptionally strong and handsome design. They carry the headlamp and also the (die cast) aluminium case. The accumulator is specially made for motor cycle lighting, and will brilliantly illuminate the head and the rear lamp for 20 hours if used intermittently. The tail lamp (our torpedo S.B.C.) is exceptionally strong and well made, and has a very attractive appearance. Each lamp is fitted with a switch, and one lamp may be used independently of the other. The outfit is despatched completely assembled, and 4 volt bulbs are fitted. The finish is ebony black and nickel plate. Complete Outfit, List No. 30/1, Price £5 5 0 (If tail lamp is not required, deduct 12/6).

"DAYBEAM" Combination Set

The set comprises Daybeam 5in. Headlamp, Ideal Sidecar Lamp, and Torpedo S.B.C. Tail Lamp. Each lamp is fitted with an independent switch, and is finished in ebony black with nickel-plated relief. The Accumulator (capacity, 6 volt, 40 amp.) is specially made for motor cycle lighting and will give very satisfactory service in use. Many have now been in use two or three years, and are as efficient as when first purchased. All our Accumulators are specially made to stand vibration. Ordinary accumulators are never satisfactory for motor cycle work. The hard wood case supplied with this set is finished ebony black, and is specially treated to withstand acid. This outfit is despatched completely assembled with bulbs and all necessary wiring, etc. Complete Outfit, List No. 30/2, £7 7 0.

DYNAMO & SWITCH BOX

(Write for List No. 7.)

4.6 volts 20 watts. List No. 30/8, Price £7 10 0

Westwood Special Lines are stocked by all reputable agents.

Ariel combination, £149/10; sidecar, £189/10; 6h.p. Ariel combination, £149/10; exchanges entertained. Pay us a visit.—Booths Motories, Portland Place, Halifax. Tel.: 1062. (6195)

23h.p. Sporting 4-stroke, T.T. bars, knee grips, tax paid, perfect, fast, photo; £28.—264, Soho Rd., Handsworth, Birmingham. (9851)

5-6h.p. Twin Motor Cycle, Bosch, B. and B., Druids, dropped frame; £12; photo; give cash for lightweight.—181, Newton Rd., Burton-on-Trent. (9711)

32h.p. Motor Cycle and cane sidecar, Enfield 2-speed, M.A.G. engine; price £35; trial any evening after 6.—52, Plympton Rd., Brondesbury (two knocks). (9552)

TRIUMPH, 3½h.p. fixed engine, economical old bus, good condition, £32; also W.D. 1919 Douglas, 2 speeds, F.E., £50.—Arcott, Mint St., Lincoln. (9482)

1918 Triumph Combination, electric lighting, Cameo, tools, £92; Enfield combination, dynamo lighting, speedometer, £100.—81, Dundee Rd., South Norwood. (9966)

IF wishing to buy (for cash or easy payments), sell, or exchange motor cycle or combination, state requirements. Satisfaction guaranteed. Distance immaterial.—Bunting's Motor Exchange, Wealdstone. (7906)

A1 Opportunity—Exceptional bargains in shop-soiled motor cycles and combinations for cash or the easiest of easy terms, no extra charge.—Write, phone, or call at Wauchops, Shoe Lane, London. (4535)

1921 Brand New 2-seater Combination, Magdyno lighting, horn, speedometer, legshields, etc., tax paid, insurance; £210, cost £245. Two weeks ago, receipts shown.—J. Miller, Builders' Arms, Longfield St., Southfields, S.W.18. (9944)

VICTORY Garage, Victory Garage.—Douglas 2½h.p., as new, unspratched, £52; Rudge Multa, beautiful condition, £45; Bat 5-6h.p., all on, tax paid, £26; Quadrant 3h.p., £25, and many others; write for particulars.—2B, Denmark Rd., Camberwell. (9509)

F.O.C.H. for second-hand cycles, combinations, and runabouts at bargain prices; exchanges arranged; any new motor cycle combination or car supplied, cash or easy payments.—Fair Offer Car House, 5, Heath St., Hampstead (near Hampstead Tube Station). Phone: Hampstead 3752. Hours 9-7, including Saturdays. (9387)

MOTOR ATTACHMENTS.

- AUTO-WHEEL**, B.S.A., as new; £10.—Neaum, Ford-
ingbridge. [9248]
- YOUNG**, 1921, tax paid, perfect, electric lighting;
25 gns.—21, Forder Rd., Catford. [9350]
- AUTO-WHEEL**, B.S.A., new condition; £9/10.—
Sibley, 106, Market Place, Romford. [9897]
- WALL** De Luxe Auto-Wheel, perfect, little used;
£10.—Channon, St. Mellion, Cornwall. [9246]
- WALLS** Auto-Wheel, fitted to lady-back tandem,
good condition; £16/10.—84, Anerley Rd., S.E.19. [9346]
- WALL** Auto-Wheel, with gent's cycle, good condi-
tion; £15. After 6.—L, 43, Manor Park, Lee. [9905]
- J.E.S.** Auxiliary Set, complete unit, with belt, tank,
drum, and jockey; £7.—15, Durban Rd., Becken-
ham. [9442]
- 1921** 1½ h.p. Economic Motor Attachments; 25½
gns.—Morris and Co., Ltd., 139, Finchley Rd.,
N.W.3. [9949]
- SIMPLEX** Attachment, practically new, clutch
model, licence; £22/10.—Arscott, West Parade,
Lincoln. [9483]
- GENTS** Cycle, with Young Attachment, thorough
good order, tax paid; £19.—W.H., 55, Minet Av.,
Harlesden, N.W. [9850]
- WALLS** Auto-Wheel, splendid condition, £12; with
22in. bicycle, £18.—26, Morella Rd., Wandsworth
Common Station. [9446]
- AUTO-WHEEL** De Luxe, splendid condition, double
control, mudshield, no plates, tax paid; £10.—10,
Park Hill, Richmond, Surrey. [9671]
- YOUNG** Attachments fitted to ladies' and gent's
bicycles, as new, all accessories; £20 and 320
miles, cost £70, tax paid; £47, or £25 each cash.—12,
Osberton Rd., Lee, S.E.12. [9562]

MOTOR CYCLES FOR HIRE.

MOTOR Cycles, solo, Saturday to Monday, 42/6;
1 week, 85/-; combination £2/6 and 19/-;
write for further information.—Maudes, 100, Gt. Port-
land St., W.1. [X2672]

TRICYCLES FOR SALE.

INVALIDS' Tricycles and Motor Tricycles; catalogue
free.—Rayner, 10-12, George St., Blackpool. [X7038]

ARGSON Hand and Motor-propelled Tricycles, for
invalid and disabled.—Particulars, Argson Eng.
Co., Ltd., 3, Kendalls News, George St., W.1. [7354]

MOTOR SCOOTERS.

- SKOOTAMOTA**, brand new; £45.—Hopkins, New St.,
Leadbury. [X5650]
- KINGSBURY** Scooter, brand new; £20.—C.S., 14,
Swaton Rd., E.3. Tel.: E3155. [1151]
- AUTOPEE** Scooter, 1920, almost new dynamo; £20.
—Wauchope's, 9, Shoe Lane, London. [9011]
- A.B.C.** Skootamota, 1921, new; £33.—Frank Whit-
worth, 139, New St., Birmingham. [X4178]
- SKOOTAMOTA**, overhauled, good condition; £30, or
near offer.—Rogers, Bank, Marlborough. [9848]
- SKOOTAMOTA** and licence, May; £30, for £28; Nor-
wich.—Box 5,315, c/o The Motor Cycle. [9489]
- SKOOTAMOTA**, late 1920, hardly used, in perfect
condition; what offers.—Snow, Old Place, Stamford.
[9318]
- A.B.C.** Skootamota, only done 40 miles; £27.—
Brownes' Garage, Loddon, Norfolk. Phone: 14.
[9238]
- 1921** Skootamota, just received from works, in
crate; £31/10.—54, St. James St., Ashted
Birmingham. [X4179]
- AUTO-WHEEL** Scooter, in running order, tax paid;
£22, or nearest offer.—307, Rotherhithe New Rd.,
London, S.E.16. [9638]
- LADY'S** Competition Skootamota, new, guaranteed;
£38; see Exchanges.—1, Station Parade, Willes-
den Green, N.W.2. [1073]
- A.B.C.** Skootamota, almost new, £30, or near offer;
also Whippet scooter, unriden; £35.—Neville,
34, Forest Hill Rd., E. Dulwich, S.E.22. [9450]
- A.B.C.** Skootamota, not run 20 miles; owner going
abroad; 25 gns. for immediate sale.—Apply
Cocksbot, Little Kingshill, Gt. Missenden. [9302]
- SKOOTAMOTA**, never been used, in perfect condi-
tion as delivered from makers; price £25.—East
Grinstead Motor Garage, Ltd., East Grinstead. [8111]

HOODS, WIND SCREENS, ETC.

- SANDHAM'S** make thousands of hoods every year;
50/- each. First quality twill waterproof.
- SANDUMS**.—The Sandum Patent Wind Screen of 100
positions, as shown at Olympia. Finest screen
on the market; 90/-.
- SANDHAM** Engineering Co., Ltd., 336, Gray's Inn
Rd., W.C.1. Phone: Museum 3427. [0635]
- WIND** Screen for 1920 Douglas combination, com-
plete; £2.—Kent, 66, Hatton Garden, E.C.1. [9921]
- HERCULES** Hoods and Aprons. Write for list.—
Hercules Hood Co., 698, Seven Sisters Rd., Totten-
ham. [1109]

The Motor Cycle Grand Prix.

B RITISH manufacturers and the British motor cycle community in general may congratulate themselves warmly on their successes in the premier French speed event of the year.

These Continental races do much good, as they promote a feeling of friendly rivalry between the two nations and also tend to improve design. What happier result could be desired, with British motor bicycles first, second, third, fourth, and fifth in the 500 c.c. class, and with a machine built of British component parts first among the miniat... One can only wish that the French had set us a harder task in the senior category. Our late allies took their beating like sportsmen, and owned that they had much to learn both as regards design and riding methods. One well-known Continental rider of the old days, a Czecho-Slav, whom we last met at Amiens in 1913, told us he was delighted to see that, while the French machines had become more complicated and less efficient, the English racing motor cycles were enormously improved and very much simplified in design. This was distinctly interesting, as our friend is an authority as well as an enthusiast, and his remarks, after a separation from the pastime for about five years, were very welcome.

English makes have now proved their superiority in speed on the Le Mans course, and it now remains to be seen how they will behave on the Alpine passes in the International Six Days Trials beginning next week. While the Tourist Trophy races have so far improved the breed of racing mounts to enable these victories to be gained, the English and Scottish Six Days have done their good work as regards improving reliability, but there is just a chance that the Swiss trial may teach other valuable lessons, and, if so, the mere handful of English manufacturers who have entered will profit by their enterprise. By continuing to give public demonstrations of the capabilities of British motor cycles our industry will maintain its present position.

Mechanical Noises.

N OISE is the bugbear of motor cycles, and much trade is lost through the fact that the general public is under the impression that motor cycles are essentially noisy vehicles.

On the subject of exhaust noises, opinions vary, and many a machine which leaves the works reasonably silenced is modified by its owner to suit his personal tastes, but to the detriment of public opinion. Even those who hold the most heterodox opinions as regards exhaust sounds will agree, however, that it is desirable to eliminate mechanical noises. Apart from the fact that noise is the outward and audible indication of wear, a tap, rattle, or squeak is most aggravating to the mechanically-minded rider. The average two-stroke engine is moderately free from mechanical noises, but is seldom efficiently silenced. A short time ago we were enabled to test an engine which was to all intents and purposes silent, except for the exhaust which, in this case, extended well behind the rider, and was not unduly noisy.

This trial emphasised the fact that, in addition to engine noises, there are many other sounds which should be eliminated. The average mechanical horn rattles badly, tanks are apt to "drum," and primary drive chains are frequently a source of noise unless adequately enclosed and lubricated. Most motor cycle gears are fairly silent, but are still capable of improvement, spring forks clash and squeak, and speedometer drives often grind. All these minor noises combine to form a considerable volume of sound, and all, without exception, are capable of considerable improvement. One has only to take note of a high-class car passing, with only the noise of the tyres on the road audible, to obtain an ideal which motor cycle manufacturers are at present far from realising.

The speed and power of the modern British motor cycle are amply proved in competitions of every kind, and manufacturers who now set out to render their productions silent will score when in sales competition on the open market.

OCCASIONAL COMMENTS

BY "IXION"

Jets and Consumption.

THE other day I took delivery of a new $3\frac{1}{2}$ h.p. T.T. 'bus, and the first trick it served me was to leave me stranded—on the Fosse Way, of all lonely places—with an empty petrol tank, for its consumption varied from 45-60 m.p.g. on the makers' jet, a 36 Amac. Having a bagful of jets, I began to experiment, and found that with a 32 I could indulge in a fair amount of scrapping and fast hill-climbing without exceeding a gallon in eighty miles. But the most amazing discovery came when a Sunday trip led me into regions where you cannot reckon on finding the garages open. On this occasion, I installed a 28 jet, and half a gallon took me eighty-two miles = 164 m.p.g. Moreover, on this 28 jet, I got quite as much speed and quite as good climbing as the average man requires; its main defects were that it stole away the frantic acceleration which hall-marks this machine on a standard jet, and, incidentally, rendered my nickel-plated exhaust pipe remarkably iridescent. I begin to pine for a variable jet with handle-bar control, and, on the whole I do not marvel at the popularity of the W.S.R. variable jet attachment.

The Foot of a Test Hill.

IN the bad old long ago, we used to see riders making a longish pause at the foot of a test hill in big reliability trials, what time they unscrewed their adjustable pulleys and fitted thinner belts to furnish a lower gear. Time changes all things; but if the hill be a real corker, we still sometimes see a clever rider halt. Should he do so, he drains the crank case, replenishes with fresh, cool oil, and swops his running jet for a thirty-sixer.

"Ta' Gaelic."

ALL of us at the office are very bored with the members of the staff who represented our interests in the Scottish Six Days. They have learnt a lot of new words, mostly ending in some such combination of consonants as "nchdgt" or something to that effect. They throw them at us, and we do not know whether we are being insulted or not. Moreover, in this hot weather they retard the ardently anticipated moment at which the typical journalist's thirst-quencher (iced lemon squash) is delivered to us, by ordering "a glass and a chaser," or "a wee deoch an doris." They learnt these bad habits in the Highlands, of course, and we are slowly weaning them back to civilised ways. A "glass and a chaser" means a tot of whiskey, followed by a pint of beer in a separate receptacle, and is obviously unwholesome in

a heat wave. I always thought "deoch and doris" was Gaelic for whiskey and soda, but it apparently means "last before door." The worst of many a Scot is that it takes too many deochs to

get him outside the doris.

Gripping the Tank.

HOW many of our readers grip the tank with their thighs, or knees, or both? I know lots of keen amateurs who consider that good riding is impossible without such a grip, either in speed work on a good surface or in rough-riding on a one-day trial. Well, here's a test of the matter. The next time you witness a one-day trial, go carefully over the 'buses at the finish, and you will find that a lot of the very best riders never use any leg grip at all. The reason is almost invariably the same—they began life as factory testers, and got into trouble if their breeches rubbed the gold lining off the tank.

About Saddles.

SPRING frames may come, and zin. tyres may be adopted as standard; but I rather fancy that bigger saddles will bulk largely in the next year or two—the leaf-mounted Brooks, the huge coil spring Terry, and suchlike. During my latest wandering I got into a county where they keep a type of road which is mercifully uncommon. Most of its surface is excellent, and tempts you to speed up a bit. Suddenly, without any warning at all, you encounter an isolated but gigantic pot-hole—soft patches in the subsoil are possibly to blame. Bang goes your front wheel into it. If you are seated on one of the modern super-saddles you do not feel the terrific impact more than if you hit an ordinary bump on an ordinary saddle. But if you are perched on one of the cheap saddles which are usually standardised by motor cycle makers, your internal organs get almost as big a shock as if you had stopped a real vicious jab from Dempsey. I saw a youthful tennis player put a well-known 'bus into such a pot-hole just as I met him. He looked quite old and grey when he came out of the pot-hole. I struck a similar hole four hundred yards on, so I know how he felt. Of course, the comparatively low-priced saddles soften down a lot in use, and after the first year form tolerable shock absorbers. But when they are new! Two of us had occasion to lower the saddle of my new 'bus last week, and it took all our muscle to bend the leather back enough to clear the nuts and bolts concerned. When I next change mounts, I shall keep my old saddle.

LE MANS—THE NIGHT BEFORE.

Impressions of a French Town on the Eve of a Great Road Race.

IN England it would be impossible to reproduce the atmosphere so apparent in France on the night before a great road race. For one thing, the national fear of appearing absurd is a constraint, while nearly every Englishman desires to go to bed for at least a few hours during the night.

Far otherwise is it in France, where one may do just what one likes, even if in the doing certain minor restrictions of the law are broken. Manifestations of glee or excitement may be indulged in to any length one pleases, and, if the thing be done properly, one does not go to bed at all.

Advertising—Personal or Otherwise.

For some time the little town which is the centre of racing activity has shown unmistakable symptoms of a coming fête. Flags, many of them advertising oil or plugs, appear on every house or café; and even on the tramway poles there are mysterious placards, 6ft. high, vaunting the claims of the accessory firms. Then there are extraordinary pictures of

quite ordinary makes of French cars proceeding at incredible speeds, and driven by young women who usually grace the pages of *La Vie*.

Every third person wears the type sport clothes beloved by our Gallic allies when motoring, varying from a goatskin coat to the loudest checks. Then the cars are inimitable. There are, of course, no genuine racers, since these are safe in bed; but every four-wheeled

vehicle which can bear a huge exhaust pipe and four wicker seats is out, driven by a man sincerely hoping to be mistaken for one of the heroes of the past or of tomorrow. The French counterpart of Britain's motor cycle "knot," too, is there in numbers.

extraordinary pictures of quite ordinary makes of French cars.

Every café is brimful, the little iron tables spread out to the kerb, and all the chatter is about the races. At one table a huge and burly Frenchman, bearded as the original *Poilus*, holds forth on the certainty of one machine winning, until one is tempted to apologise for ever having doubted the result. A few seconds later, one hears a man on the left divulging state secrets about another mount, which the designer himself would learn with interest, and so the chatter goes on, intermittently audible, amid the tempestuous roar of open exhausts, as cars, backed against the pavement, get away. In the streets, newspapers, incon-

ceivably ragged, emit shrill cries of "*L'Auto*" and "*Le Journal*." It is the Isle of Man over again—only more so!

In England next-door neighbours are regarded with suspicion, especially if they speak without an introduction; but here one can—and does—talk to anybody as fancy pleases; and whether he understands or not, he will be most entertained. Indeed, the language does not matter much, for if the genders of motoring technicalities are a stumbling-block, it is only necessary to discover in which sector one's new friend served, and the *argot* of the trenches will cover all grammatical errors.

By midnight coloured streamers are being thrown about in the principal *cafés* of the town: the cars, bearing twice their normal load, are rushing here and there to the continuous shriek of electric horns, and everybody is supremely happy.

At a very early hour a stream of people sets out for the course, each man, woman, or child bearing a basket, in which, covered by a clean white cloth, is bread in long rolls and bottles of wine. Whatever happens—cold or wet, or darkness of unusually pitch-like variety—off they go, the throng increasing every moment, till the tramp of feet rouses those optimists who thought they would sleep a little. Men on bicycles—the peculiar scraggy French bicycles—motor cycles, cars from Paris, and even decayed taxicabs, all pour out of the town for the course, becoming a rolling multitude as the grey light of dawn spreads over the scene.

WHERE ABSOLUTE CONCENTRATION IS NECESSARY.

A MEMBER of *The Motor Cycle* staff had an interesting chat with George Dance the other day, and learnt the inner history of his failure to win the Senior T.T., which was such a disappointment to Sunbeam enthusiasts, and no less to Dance's many personal friends.

Dance was riding a very careful race, and, when he was leading at the end of the fourth lap, he had never really opened his engine out. Even on the straight towards Sulby he had not used more than three-quarter throttle on any lap, so that he had a good reserve in hand if the final lap should prove tight. On a certain

bend in Glen Helen there is a particular line which must be taken if the corner is to be rounded at the speed which Dance considers the safe maximum. He struck the desired line accurately enough, and got a tremendous ovation from the crowd, with whom he would certainly have been a very popular winner. The noise made him take his eyes off the road for the fraction of a second, and he was in the ditch like greased lightning. A large stone tore the bottom clean out of his gear box, and bent the perpendicular control rod, so that he was restricted to top gear for the rest of the

distance. Dance says grimly that he will not look off the road in 1922 even if somebody lets a maroon off. Under the circumstances, Dance was naturally rather proud of finishing, and the fact that the machine safely accomplished the remaining lap and a half is much to the credit of the Sunbeam gear box.

The Sunbeam exponent was not the only rider in the T.T. to suffer through the goodwill of the crowd, although perhaps the consequences were not so important. At several points we observed that the shouting and excitement of the spectators caused many a man to wobble.

First-hand Impressions of Men, Machines, and Organisation in the Scottish Six Days Trials. By B. H. Davies.

TO the stay-at-home reader one Six Days must appear very like another; we, who travel through most of them, recognise a profound difference between the "Scottish" and the "A.C.U." The northern event, naturally, has the better of any comparison in air (*what* an appetite it gives us); in hills ("Hech! sirs!"); and in scenery (if only the roads ever allowed us to deflect our eyes from the going for more than a split second).

There are also differences of administration. The English trials are managed by a horde of officials with slide rules and weird instruments. The Scottish event is principally bossed by two genial amateurs, who listen to your tale of woe, look at each other, and remark blandly, "Och, well, he's a guid lad, give him his medal!" They know that any 'bus which can do 900 miles approximately to schedule over their appalling roads cannot have many flies on it; and, provided you ride like a sportsman, don't cheat and don't bring your solicitor up with you to frame windy protests—they like you and your 'bus to have every possible credit.

The 'buses deserved credit this year. Perhaps our task was lightened by the absence of rain until Saturday—only the veterans of the Scottish know what the 183 miles of the Applecross run

are like when they are greasy. But there are others who say the perpetual dry-skids of this year's bone-dry going were worse than any grease. And the dust! Unco' bad for engines, and unco' bad for the men—at least one poor chap lost his "gold" because his eyes got so inflamed that he could hardly see the road.

The high-spot of the week was the fact that the little 'uns ate up the roads and the gradients better than the 500 c.c. machines were doing a year or two back. Low gear ratios, do you say, sir? Well, some

of the ratios *were* low; ask the two-stroke merchant who took four miles of Applecross on a 17 to 1 gear whether he had pins

and needles in all his fingers at the top. But the technical feature is that the 1921 engine does not distort even if it is set to cover four miles on a 17 to 1 gear under a blistering sun. The contrast with the old days was simply colossal. The 500 c.c. machines pobbled round the 1 in 5 hairpins with their throttles in slow running position on gear ratios which would have seized them

solid in 1914; and the babies "revved" eternally on low gears which would have welded piston and cylinder into an integral mass before the war. *For roadster purposes distortion has been eliminated.*

Nothing proves this more forcibly than the feats of the Rover

On the upper reaches of Tornapress, showing Loch Kishorn in the distance. J. T. Bashall (6 Martinsyde sidecar) draws near to the summit of the strenuous six-mile climb.

Round the "Scottish."—

Photographed immediately on its return from the "Scottish," the rear Dunlop tyre of the Sunbeam.

cycle cars. The Rover drivers were not too confident at the start. Low be it whispered, they took spare cylinder heads to Edinburgh just in case. The officials said: "We have no wish to stall you in the wilds—you may carry these spare heads lest evil befall you; but we shall seal your heads." In the event the six Rovers earned four "golds" and a "silver" without distorting their original

injudicious "blinding" on surfaces which were dangerous and on roads which dipped and twisted in a manner that shrieked for caution. *It is just that extra 5 m.p.h. which does it.*

The Element of Luck.

Once or twice I let myself be tempted by a horde of scorching maniacs into putting up the pace a trifle, and at such times I was in constant touch with danger to myself and my mount; but so long as I rested content to let these fellows rip past me in clouds of dust and small stones, a calm finish was a certainty. Two of the leading trade teams consisted entirely of riders who failed to impress me by either their skill or their sense.

Then there is always luck to be reckoned with. One man's coat sleeve caught his throttle on a test hill. Another who was tuned for petrol got a jug of benzol in his tank, and could not find a mixture all day (the fuel man had the juice waiting for us in jugs). Fenn had a back tyre which was oversize in the beads, and came out of the rim if he used his brakes hard. Shepherd's twin B.S.A. sidecar was brand new, and its lubrication system had a wee defect which starved the front cylinder of oil; so he had to over-lubricate, and used from eighteen to twenty-five plugs per day.

Fairley's A.B.C. car had a barrowful of sand in the petrol tank; when he was not taking his jets out, he was scrapping at 50 m.p.h. over bleak moors to catch up time.

In one such scrap along a six-inch fairway between two deep ruts my horrified eyes spotted a huge rock shaped like a shark's fin projecting clean across my path—its roots probably went down to New Zealand. I might have broken a wheel on it if I had not seen it; having seen it, I might have got a terrible wobble on in the ruts, and buckled my frame in the resulting toss. As it was, more by luck than judgment, I swerved into a rut and out again like a flash; but it is just such little incidents which decide whether "Gold" or "Retired" is to adorn

The Tapley gradometer, which registered the gradients on the Scottish test hills for the benefit of *The Motor Cycle* readers.

heads. One little spot of extra luck would have given them six "golds"; for the car which retired did so owing to a steering mistake, and the "silver" merchant had one of those momentary engine stops which occasionally occur in the best families. Incidentally, the small car mopped up the three-wheelers à l'Allenby. Fourteen four-wheelers entered, mostly of the cheaper types, and ten won their "golds"—70%; thirty-six three-wheelers entered, and nine won "golds"—25%. The three-wheeler (cycle car or sidecar) is not quite in its element on roads which are both bad and difficult, and chassis fractures were all but universal; in this *débâcle* the 3½ h.p. Sunbeam outfit earned undying fame.

The roadsters of 500 c.c. and over were so obviously master of the conditions that the dread of being reduced to a mere silver or bronze award depended on two "ifs." The one was tyres, and the other was driving skill. Crashes were frequent—there must have been at least fifty of one sort or another. Of course, the biggest "if" in driving concerns the clean ascent of the official hills. None of them had quite such appalling surfaces as the precipices which the A.C.U. loves. They were altogether fairer and better hills—quite reasonably climbable even by a total stranger, calculated to punish any "dud" engine, and quick to impose penalties if you did a bit of bad pathpicking or went up too fast. I suppose the standard of driving was as good as one can expect in a large entry over very trying routes; but the fact remains that at least another thirty machines would have secured "golds" if they had been handled by men of the calibre of George Dance, or Westwood Wills, or Neville Hall, or young Downie. There was much clumsy hillwork, and lots of wildly

your name in the final list.

I hate to say it, for our hosts are such excellent sports; but I soberly consider that the judging went a trifle astray, to the benefit of one or two men and the detriment of others whom I deemed more deserving. With many test hills of

Looking at this kinked rim, one can only marvel at the excellent condition of the tyre in the upper picture.

Round the "Scottish."

extreme length it is certainly next to impossible to ensure a uniform standard of observation, as every harassed trials secretary knows full well; and in a big trial which includes fifty three-wheelers and four-wheelers the problem of "baulks" is added to the old cruxes of foot-slogging and wheel slip. My personal impression is that the penalisation grew more lenient as the week wore on. On the first day or two hill failures were few in number and more or less obvious in character; a stern standard was applied. On Wednesday we had three hills, of which Glendoe was the scene of a dreadful baulking mix-up, and Inverfarigaig Corkscrew was a bit of a freak. Fifty-two adverse reports were received from the observers on these three hills, and were officially posted that night. A crop of protests immediately resulted, and the spirit of genial sportsmanship led to some of them being very favourably received. Then the men who had sustained not too obvious stops on the earlier hills chewed the cud a bit, and got out their pens. You know the first essential in entering a protest? "Make a noise like a grouse." Some of them did.

"Reminiscing."

In between times we had lots of fun, especially at night when, over the national drink, competitors described the ardours of their day, or "reminisced" about previous experiences in all parts of the world. We chaffed each other. Calderon had a cigarette tin fixed to the middle of his top tube; it held fifty at the start each day, and about three at the night check, so the week cannot have been one long scorch for the Velocette. The modern "baby" is capable of the most astounding speeds. Harry Macrae and I refreshed Calderon after he had been stopped with a broken chain. We pushed him off, topped the next rise, beheld half a county, but no Calderon! I never saw a landscape vacated so rapidly. About Friday three of us fell to bragging that we looked like completing a Scottish without a spill. That afternoon, on a lonely moor track, Hugh Gibson overhauled Christie, whose forks had bent in a crash, and rendered his steering "serpentine." Gibson made the mistake of steering a course which was a tangent to one of Christie's arcs—both men flew. I myself was pottering gently through the lunch check on Saturday on the extreme right of the road when young Downie took a sudden dislike to me, and tried to turn his Raleigh round under my front wheel. We both flew. Sproston lasted longest. He was in the very act of handing his card to the finish checker at Edinburgh when a taxi resented the natty appearance of "Spross" and his Lea-Francis. They both flew.

Repatee—assorted!

George Brough is one of the clever lads. He started No. 1 on Wednesday, and, having heard fearsome yarns about the Corkscrew, he decided to reach it early, dismount, and walk up before he rode it. When ochre and arrows diverted us through the usual gate, the side track consisted of nine inches of loose sand. This so occupied George that he never saw the placard "Observed Hill Begins Here." So for the time being he was posted as a failure. That night

Kind Friend: "Sorry you failed on the Corkscrew, George."

George (irately): "I didn't. I only failed on the handle!"

Saturday morning brought us a baby two-stroke size in cloudbursts near Callander, and the dips of the road were flooded. In one of these ponds I met a motor char-à-banc. When I emerged I resembled a survivor from the Lusitania.

"How's your engine going, Tom?" was a frequent query in one of the cigarette intervals outside a check twenty minutes ahead of time. The prize answer was, "Wouldn't pull the skin off a rice pudding."

If you should hear that an innocent Highland gillie met a violent death at the hands of one of the boys, the verdict will be justifiable homicide. The boy had just stuck on Glendoe, and the gillie asked, "Wull she no tak' yon bit brae?"

Who was Next?

The last contact with civilisation en route to Applecross is a lochside village yclept Jeantown. But you must not pronounce it "Jeantown," or none of the natives will be able to tell you the way. You must practise till you can articulate "J'n't'n" with a strong flavour of peat and whiskey. A week ago I could recommend Mr. Mackenzie's stores in that burgh. I ordered a large crate of sandwiches for the observers on the hill. "Wull tenpence be over much?" asked the shy maiden. I carefully paid up before remarking, "Any hotel would charge me 5s." She replied demurely, "I'll be knowing when the next one calls."

Ballochandrain aroused mixed emotions. Some men found this hill very easy, and circulated a yarn that it owed its inclusion to the fact that a search party from the Edinburgh club explored it in the dark—after a Highland dinner. Others regard it as a better engine heater than Tornapress. I took the trouble to put my Tapley gradometer on it, and found that the steeples ran as steep as 1 in 4.2, but the dips between the steeples were numerous, so that a climb becomes a series of short rushes; I think a following wind was responsible for the only excitements which it caused. I arrived on this hill hot, thirsty, and lunchless. After a time I noticed that Harry Macrae, the genial O.C. Hill Observation, had half a bottle of Bass remaining. I had never previously supposed that he was so flinty-hearted a fellow. Presently I saw his brother, R. S. Macrae, ascending at speed on his Harley sidecar. Moreover, Harry had temporarily relaxed his guard on the precious bottle. "R.S." completed the hill rejoicing. Revenge is sweet.

How the Sunbeam behaved.

I had almost forgotten my own mount. Sunbeams are officially credited with six entries and six "golds." It ought to be eight "golds." I myself rode a brand new standard sports Sunbeam round the course, as did another knight of the pen. Both of us enjoyed a picnic. When A. L. Downie bowled me over, he broke my inlet valve spring; and, oddly enough, the corresponding spring broke on the other press Sunbeam. Apart from that I did not have a mite of trouble, and the general conduct of the machine was such that Great Britain would have held no more astounded man than myself if any mishap had occurred. The gears were approximately 5, 9, and 12; and the slow running position of the throttle on the lowest gear amply sufficed for all gradients. The

BY MOUNTAIN AND LOCH IN THE HIGHLANDS.

Scenes in the
Scottish Six Days
Trials.

(1) J. Richardson (5 Lea-Francis sidocar) alongside the river Garry, near Dalnacardoch. (2) 'Midst the silver birches.' G. Nott (7 Matchless sidocar) on an easy portion of Inverfargigaig. (3) A quartette near Aviemore. G. M. Townsend (P. and M.), R. Watson (4½ Humber), J. R. Fellows (3½ Sunbeam), and C. Moser (4 Triumph). (4) Norman Black (5 Omega) climbing Inverfargigaig in good style.

Round the "Scottish."—

steering at speed is rock-steady, and at ordinary speed on rough surfaces I managed to hold it up quite successfully, though I had enjoyed no rough-riding practice for many months. The brakes and controls are all admirably thought out, whilst the engine is remarkably well balanced for a "hot-stuff" single-cylinder. I could not make the engine smoke, so that the Lodge racing plug took me 1,500 miles without a misfire and without being looked at. There cannot be a better 'bus in its class, and if any novice wishes to begin earning gold medals in the big trials, he can buy a Sunbeam and be sure that if he fails to secure a "gold" it will be his own fault. I feel almost equal admiration for my Dunlop tyres, which were $26 \times 2\frac{1}{2}$ in. heavy pattern. Never before have I got through a Scottish without more punctures than I care to remember. This year I went up from Coventry by road, round the trials, and back by road to Coventry without

any tyre trouble. The accompanying illustration shows the condition of the tread at the end of this distance; it is notably free from stone cuts, though another picture—showing a kink in the rim—indicates how rough some of the going was.

Any tourists who purpose travelling north for their holidays should consult the A.A., as road conditions are very variable, and, since repairs are now in progress at many places, the surfaces vary from week to week. The Great North Road is mostly rough north of Doncaster, though not so atrocious as it was in last year. The best way into Scotland is probably to cut across Durham county (e.g., by Bishop Auckland) to Corbridge, and thence to take the Carter Fell route. The A.A. recently reported that this route was in bad order. Doubtless they had the Newcastle-Elishaw section in mind, for, if one travels by Corbridge, one dodges the Newcastle tramlines and gets splendid going except for three miles.

LONG DISTANCES AT SPEED.

The Grand Prix, Tourist Trophy, and 500 Mile Races Compared.

ELSEWHERE in this issue will be found a description of the Grand Prix Race over the Circuit de la Sarthe—the French classic event, second in importance to the Tourist Trophy Races in the Isle of Man. At the time these notes are penned, the results are not known, and they have been inspired by speculation as to the speeds at which the various classes will be won.

Whatever the speeds attained, they no doubt will be compared with the performances of similar machines in the Isle of Man and during the 500 mile race at Brooklands. The conditions in the three events are very dissimilar. The Tourist Trophy Races are held over a twisting course with many awkward bridges and corners. In addition, there is a long trying climb "up the mountain" and then the descent.

The 500 mile race was held on the Brooklands Track, where speeds of considerably over 100 m.p.h. are possible. In other words, Brooklands places no handicap on the machine on the part of speed, whereas it is maintained by many that the I.O.M. course is of such a nature that much faster machines than those which have competed in the races could not materially improve the times.

Only Three Acute Corners.

The Grand Prix course at Le Mans is the third proposition. Roughly triangular, it has but three acute corners, and therefore the speeds attained should be higher than those of the T.T. winners, but lower than those attained in the 500-mile race. As a means of comparison, we give below some of the performances put up by the various size machines in the two British events.

Tourist Trophy Races.

250 c.c. (distance 188 miles 6 furlongs).—D. G. Prentice ($2\frac{1}{4}$ New Imperial-Jap); speed 44.9 m.p.h.

350 c.c. (distance 188 miles 6 furlongs).—Eric Williams ($2\frac{3}{4}$ A.J.S.); speed 52 m.p.h.

500 c.c. (distance 226 miles 4 furlongs).—H. R. Davies ($2\frac{3}{4}$ A.J.S.); speed 54.49 m.p.h.

Five Hundred Mile Race.

250 c.c.—B. Kershaw ($2\frac{1}{4}$ New Imperial), 100 miles, 57.42 m.p.h.; 200 miles, 51.26 m.p.h.; 300 miles, 51.26 m.p.h.; 500 miles, 50.34 m.p.h.

350 c.c.—N. Norris (3 Ivy two-stroke), 300 miles, 51.64 m.p.h.; 500 miles, 51.69 m.p.h.

500 c.c.—V. Horsman ($3\frac{1}{2}$ Norton), 100 miles, 65.01 m.p.h.; 200 miles, 62.75 m.p.h.; 300 miles, 62.5 m.p.h.; 400 miles, 61.76 m.p.h.; 500 miles, 62.31 m.p.h.

ON BRITAIN'S HIGHEST MOUNTAIN.

It is highly improbable that Ben Nevis will again be conquered by a motor vehicle, as the bridges on the track have been carried away by mountain torrents. A local Beardmore-Precision rider discovered this on the occasion of a recent attempt. He is shown on the lower reaches.

COMPETITIONS ALL OVER THE WORLD.

The Motor Cycle Movement Expanding from "China to Peru."

AS a sport motor cycle competition riding enjoys a world-wide popularity.

It is only natural, however, that "different countries, different methods" should be the rule regarding the best, most enjoyable, and most useful form which these events should take. At the same time, it is gratifying to note that more and more are the other countries of the world following the lead set by Britain.

Not only is this so in the case of reliability trials; it also applies to racing. For example, America is now considering the formation of a central club on the lines of The British Motor Cycle Racing Club. It is a project that we feel sure will meet with success.

When all things are considered, the leading position that Britain holds in the world of competitive motor cycledom has

been gained simply by reliability trials on sensible lines. If we except the T.T., road racing is unknown in England; yet abroad, in South Africa, Australia, and New Zealand, and on the Continent, in France, Italy, Sweden, Germany, Austria, and even Czecho-Slovakia, this branch of the pastime is probably the more popular of the two. Of course, in the majority of these countries the authorities do not look unfavourably on using the roads for speed events.

Trial and Road Race in South Africa.

We give below a number of reports of important competitions held in widely varying localities. They are doubly interesting in that they illustrate the universal popularity of motor cycling, and indicate the form the sport most generally takes in various places.

An important competition in South Africa, the combined reliability trial and hill-climb for the Vacuum Cup, was held recently by the Cape Peninsula M.C.C.

Most of the competitors lost no marks for reliability, and therefore the destination of the cup was decided by the formula performances in the timed ascent of Sir Lowrey Pass. F. J. Harrison (7-9 Harley sc.), winning for the second time, secured the cup outright. Second and third respectively were J. W. du Toit (7-9 Harley-Davidson) and L. M. Cran (4 Harley-Davidson). J. W. du Toit also won the special prize for fastest time of the day. A Triumph and sidecar was fifth.

The Pass is 3½ miles long, and in the words of a South African correspondent, is "just a good old grind all the way, with two or three sharp bends."

PICTURES OF WORLD-WIDE INTEREST.

From every quarter of the globe comes the news that the popularity of motor cycle competitions is on the increase.

(1) A successful competitor in a race arranged by officers of the Japanese army in Nahayana. The rider's mount is a 4 h.p. chain-driven Triumph.
(2) A competitor at speed in a hill climb near Prague, Czecho Slovakia.
(3) Swedish owned motor cycles lined up at the Central in Orebro during the trial which is described on the following page.
(4) The joys of camping. Two American X's almost bogged in rough going near Salt Lake City, Utah, U.S.A.

Competitions all over the World.—

Durban-Johannesburg Race.

What is regarded as the South African T.T.—a race from Durban to Johannesburg—attracted fifty-nine entries in the solo (handicap) and twelve for the sidecar (scratch) event. Locally built, British and American machines were represented, and the handicapping was apparently on a very fair basis.

E. Blackburn, a nineteen year old rider on a 7.9 h.p. Harley-Davidson, secured a very popular win in the solo class in the net riding time of 10h. 12m. 19s.—an average speed of 40 m.p.h., breaking all previous records.

A. Hildebrandt (2½ Hilda) was second, and L. R. Cohen (4 Triumph) ran into third place.

An 8 h.p. American X sidecar, ridden by A. Long, was first in the sidecar class with a 7.9 h.p. Harley-Davidson sidecar a good second.

British Machines in Toronto Hill-climb.

Triumph motor cycles made a good showing in the recent hill-climb of the Toronto M.C.C. In the 1,000 c.c. classes, however, American machines had things all their own way, and Kipp's ascent, when he made fastest time on his Indian, was spectacular to a degree. Results:

600 c.c.—1. C. Tockey (4 Triumph), 13½s.; S. Orange (4 Triumph) and W. St. George (4 Triumph), 17½s. tied for second place.
PRIVATE OWNERS.—1. W. Ward (7.9 Excelsior), 13½s.; 2. T. Cassidy (7.9 Indian), 15½s.; 3. T. Brown (7.9 Harley-Davidson), 15½s.

AMATEURS (Open).—1. G. Orange (7.9 Reading), 10s.; 2. T. Brown (7.9 Harley-Davidson), 12½s.; 3. A. Shuttleworth (7.9 Jefferson), 14½s.
OPEN.—1. H. M. Kipp (7.9 Indian), 9½s.; 2. T. Eisenbise (7.9 Reading), 10½s.; 3. A. O. Donnell (7.9 Harley-Davidson), 10½s.
SLOW CLIMB (Open).—1. T. Eisenbise (7.9 Reading), 6½s.; 2. C. Tockey (4 Triumph), 56½s.

Hill-climb at Prague.

Post-war roads in Eastern Europe are not all that might be desired, but nevertheless Czecho-Slovakia is going ahead with a strong programme of competitive events.

Over the well-known Prague-Jiloviste-Koenigsal course the first annual motor cycle race meeting was held on May 22nd by the Automobile Club of Czecho-Slovakia. An immense crowd of spectators was attracted to the picturesque course (of approximately three and a half miles) on the hills just outside Prague.

It was splendidly managed by the progressive and enterprising club, which, although its chief interest lies in the car world, exerts every resource to make the motor cycle classes a success and to propagate the movement. Results:

SCOOTERS.—Reckzeugel (C.A.S. scooter).
MOTOR CYCLES.

350 c.c.—1. Krzmar (2½ Douglas); 2. Smikal (2½ Moser); 3. Deyl (2½ Diamond).
500 c.c.—1. Desensky (Frera); 2. Gerget (N.S.U.); 3. Michel (Orion).
600 c.c.—1. F. Marik (Indian Scout); 2. Gut (Frera); 3. Spatny (Indian).
750 c.c.—1. Boehm (James); 2. Knapp (A.J.S.); 3. Wanek (Walter, a Prague make).
1,000 c.c.—Chlad (Indian).
OVER 1,000 c.c.—1. Hartmann (Sascha); 2. Stibral (Henderson).
1,000 c.c. SIDE CARS.—1. Pan Dietz (Frera sc.); 2. Konecny (N.S.U. sc.).

Justice requires us to point to the fact that the British-built machines participating in the race were all in the hands of private owners, and mostly were war-worn 1913 and 1914 models.

Four-day Swedish Trial.

Sixty competitors supported the big event of the year in Sweden—the trial organised by the *Svenska Motorcykel Klubben*. Approximately 1,000 miles were covered in four days.

Although the intention of the ruling club was to make the event an international one, owing to the difficulties in getting the rules ready in time only two (Norwegian) riders supported the trial from outside. A.B.C., B.S.A., Royal Enfield, O.K., and Rudge machines were represented, but American makes were in the majority.

Starting from Stockholm, the route included many of the most difficult test hills in Sweden, and, incidentally, practically all the country was visited by the competitors. A 23 m.p.h. schedule was set, and proved very difficult to maintain. Results:

250 c.c. CLASS.—Sarnmark (O.K.).
350 c.c. CLASS.—Lundgren (Wanderer).
500 c.c. CLASS.—Kleine (Invicta).
750 c.c. CLASS.—1. Larsson (Indian Scout); 2. Westerberg (Harley Sports).
1,000 c.c. CLASS.—Forssing (American X).
OVER 1,000 c.c. CLASS.—Lindholm (Henderson).
PASSENGER MACHINES (1,000 c.c. Class).—Westerberg (Harley-Davidson).
PASSENGER MACHINES (over 1,000 c.c. Class).—Svanback (Henderson).

WEATHER PROTECTION ON TWO WHEELS.

Seeking Car Comfort on a Solo Mount.

In this illustration the driver's hand is resting on the lever which raises and lowers the side wheels.

Showing how the trailer wheels adjust themselves to road inequalities.

FOR years the motor cycle has been accused of lack of weather protection for the driver; therefore, any attempt, such as that we describe, to give the rider something approaching "limousine comfort" must be regarded seriously.

Messrs. Brown and Roper's vehicle is rather difficult to classify, but the design is easily followed from the illustrations. A 4 h.p. Douglas engine and frame form the basis, but the wheelbase has been lengthened and a form of chassis attached to take the two trailer wheels. These wheels may be raised or lowered instantaneously by means of a single hand lever. An im-

portant point about these wheels is that the axle to which they are attached is pivoted centrally, thus allowing automatic adjustment on corners and uneven

surfaces. The body is readily removable to allow access to the engine or transmission. A very low seating position also tends to give freedom from skidding.

Steering is by wheel connected by rods in tension to the front fork. Beyond the fact that the gear box is set further back than usual, the transmission is the same as on the original Douglas machine. Side shields and footboards are so designed that an adequate current of air reaches both cylinders. These shields are not shown in the illustrations.

The designers and makers are Messrs. Brown and Roper, engineers, 43, The Canal, Salisbury, Wilts.

An impression of what the monocoque illustrated above will look like when completed with bodywork, hood, and screen.

A Commentary based upon Practical Experience and a Study of Overseas Opinions.

Lack of Information for Overseas Buyers. THAT the majority of motor cycle and accessory manufacturers' advertisements are far from informative is an increasingly common complaint from readers in distant corners of the world. Yet it should not be difficult for the advertisement writer in his office in England to realise how irritating it is for the motor cyclist in, say, Siam to see advertised apparently just the article he requires, but with some vital descriptive point omitted.

In six cases out of seven the missing factor will be price; but the other may be any equally essential item of specification. Most probably the makers' catalogue contains all the desired information, but a three months' wait for a list on the top of the inevitable three months' wait for the article itself is calculated to discourage the most enthusiastic potential buyer.

This may appear a minor point, but the many references to the subject contained in our overseas post bag indicate that a change would be much appreciated by both exiled British riders and the majority of motor cyclists abroad. It has been suggested that, say once a month, manufacturers should substitute veritable catalogues for their present artistic, if bald, page and half-page efforts to convince the public of the supremacy of their goods.

Steel Sidecar Bodies for the Tropics. AUTOMOBILE manufacturers discovered some time ago that coachbuilt bodies were not ideal for cars intended for tropical and sub-tropical areas. Ordinary coachwork splits and ordinary varnish peels when subjected to prolonged exposure to a blazing sun; as a consequence cars with aluminium and all-steel bodies are becoming increasingly popular for export, particularly to India and the Far East.

What applies in this respect to cars also applies to sidecars, and already American sidecars with steel bodywork are freely available on the near and far eastern markets. Standard British sidecar outfits, however, are almost invariably equipped with coach-built bodies, and in most cases the makers are very loth to depart so greatly from their catalogue specification as to substitute a special weather-resisting body.

Of course, British aluminium and steel sidecars can be obtained, but the average buyer of a sidecar outfit naturally prefers the attachment to be that supplied by the makers of the machine, and his choice is therefore limited to the one or two firms who offer steel bodies.

It is in details such as this that the greater enterprise and closer study of specific conditions by the American maker gain for him a secure position in many overseas markets.

Representative British Machines in a Six-mile Climb.

It is not unusual nowadays to hear it remarked that the average British motor cycle engine of 1921 is no more efficient than, and is no improvement on its prototype of, 1914. How erroneous is this widely held supposition was amply proved this month, when the Scottish Six Days Trials included the six-mile Tornapress-Applecross climb for the first time for seven years.

In 1914 this long mountain pass—perhaps more nearly approximating certain overseas conditions than any other in Great Britain—proved the Waterloo of more than 50% of the entry; this year it was monotonous to watch the long procession of machines—including a $3\frac{1}{2}$ h.p. and a $2\frac{3}{4}$ h.p. sidecar—simply toying with the gradient.

Those of our readers who have been somewhat out of touch—except on paper—with the progress of the modern British motor cycle and who are now riding pre-war machines in out-of-the-way corners of the world do not realise how wonderfully efficient the 1921 motor cycle is. Externally there may be little change in pre-war and post-war power units; actually the improvement is immense.

Such comparative data as that referred to above help to convince even the most remote backwoods settler of the efficiency of the modern British motor cycle.

Effects of the Tourist Trophy.

VISITORS from overseas who were able to witness this year's Tourist Trophy races in the Isle of Man agree that it has been the finest test of the year, both from the sporting and manufacturing viewpoint. They have been much impressed by the amount of energy and care displayed by both riders and entrants, and by the lessons learned, which have a direct bearing on the products of the competing firms. Parts which have stood up to normal wear and tear at home and abroad have given trouble in the Isle of Man, and a rectification of these faults is all to the good of the user, especially of the rider who dwells in out-of-the-way places, where repairs are difficult and spares take many weeks to arrive. Engines and transmissions which can stand 200 miles of race driving with constant and violent accelerations and decelerations, will withstand any work that is likely to be encountered

Overseas Section.—

throughout the world. For the benefit of those who are not familiar with the Manx course, it should be explained that, roughly speaking, there is a corner for every mile, that there is a seven-mile climb, and that two of the corners are real hairpins—the road doubling back on its tracks in each case. Consider then the fact that the winning machines averaged about 54 m.p.h., and some conception may be obtained of the strain on man and machine.

That a 350 c.c. A.J.S. should be able to defeat a field of picked 500 c.c. machines is a wonderful tribute to the manufacturers, but, without wishing to detract from this wonderful performance, it is only fair to

add that many crack machines experienced bad luck. The element of luck enters largely into a race of this description, and Sunbeam, Triumph and Indian were all close contestants for the lead at various points. To cut an hour off last year's "Junior" times is no mean performance, and gives some indication of progress made; but, when the lessons of this year's race have been duly assimilated, it is safe to conclude that we shall witness even better speeds in the 1922 event. Overhead valves were successful in both Junior and Senior events, and it is to be hoped that in the interests of efficiency and economy, even more attention will be paid to a study of this important feature of design.

A Selection of Letters from Readers scattered all over the World.**Conditions in Nigeria.**

A Nigerian reader, "WELLWISHER," speaking of tyre sizes, says:

"I am very glad to note, in your excellent journal, which I read constantly, that the English makers are fitting larger tyres to their machines. There is a large and increasing demand for motor cycles in Nigeria, not for racing, but for getting about on business, and it would be an excellent thing for them, and for us, if some of the makers specialised on machines for the Colonies, bearing in mind that riders are generally many miles from any sort of garage or motor mechanic; and that large tyres are necessary for any degree of comfort. There are many American machines in use here, their chief attraction being the size of the tyres."

"Roads" at Mossel Bay, South Africa.

Writing from Mossel Bay, South Africa, "JACOBUS" sends the following interesting commentary on one species of overseas road: "Having read various bewailings and bemoanings in the correspondence columns of your paper, anent the atrocious surface of the roads in England, I feel it incumbent upon me to unburden myself of a monologue on *real* Colonial roads.

"We have three kinds of roads in this country. (1.) Rotten. (2.) Darn rotten. (3.) Asterisk, blank rotten. Most of them are in categories (2) and (3).

"To state my own distressing case. One evening, while riding the sturdiest of sturdy 4½ h.p. singles, a machine which

I have always considered the ideal mount for this country—your readers have probably guessed the make, so I will leave it at that—I experienced an unbelievable thing. I fractured the fork in *all four down tubes*. I was travelling at about 25 m.p.h. on a lonely (and, therefore, atrocious) road, when, wallop! Mark you, it was no fault of the bicycle. It has been the faithfulest of faithful friends, but it met a road the awfulness of which the makers had never dreamed of.

"Seriously, though, your riders in England have nothing to wail about. Take any two miles of Colonial road and see what horrors it contains. First, drifts. Not nice polite water-splashes such as figure in the big trials in England, but perhaps thirty yards of water with a descent down a bank of 1 in 3, of unknown depth and bottom surface, and an ascent of 1 in 3 on the other side.

"Take sand. Sometimes two miles of thick white sand, which traversed on a real karroo, windless day, travels with you in a species of smoke screen, filling your eyes and nose and ears and aggravating the skidding sliding tenor of your course. Take mud. A cousin of mine was recently bogged up to his axles in slimy ooze. Your trials are, to us, tours over our usual roads, and therefore to be laughed at. One photograph in a recent issue tickled me immensely. The hill in a certain club event was in such good condition that barricades of boulders had been placed on the good surface to drive riders into the rough. Out here, barricades of boulders would have to be placed on the sides of the roads to prevent competitors taking to the smoother veldt."

TYPICAL CONDITIONS IN THE ILKLEY OPEN TRIAL.

A characteristic panorama on the Yorkshire moors, showing C. R. Waddington (Morgan) on the lower portion of The Stake.

Letters to the Editor

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

BRITISH MACHINES IN SWITZERLAND.

Sir.—In *The Motor Cycle* of June 30th you quote a correspondent from here who says there are very few English motor cycles in Geneva and only one agency. In town recently I noticed the following makes, viz.: Hobart, Clyno, New Imperial, Royal Ruby, Scott, Norton, Douglas, Enfield, Omega, and three or four Triumphs, big and little, all of which have their agents here in Geneva. Your correspondent is not exactly *au courant*. EDMUND CANBY.
Geneva, Switzerland.

FASCINATING BELT DRIVE.

Sir.—As a rider of a Zenith Gradua for the past two years, I too, like "Medicus," have often wished for some form of handle-bar control for this type of gear change, and it may be of interest to him and other users to know that I have devised and partly constructed a means whereby this is possible from a thumb and finger lever on the handle-bar.

At the present time I have not got the opportunity nor the accommodation to complete the model for experiment, and its only drawback, so far as I can see, will be its costly construction. ERNEST LEWIS.

BRITISH BIG TWINS.

Sir.—The 500 mile race was recently held at Brooklands, and no British big twin put up any performance to compare with that of the leading American machines.

I know many motor cyclists who have been waiting for the Brough-Superior to distinguish itself, and they are surprised that one or two were not entered. If they are guaranteed to do 80 m.p.h., as I understand is the case, surely they should put up a good performance in expert hands. May we hope to see some of these machines during this season's racing? G. WAKE.

Sir.—In your issue of July 14th, "Ixon," under the heading of "Wanted, a British Super-twin," laments that there is not a British-built machine able to come into this category.

Possibly the heat wave is connected with the fact, that in this instance, "Ixon's" memory is not "revving" up to its accustomed standard. There is a British super-twin, and its name is "Brough-Superior." A fledgling admitted, but a remarkably precocious infant withal. Give it a season in which to shake its feathers, and we shall then probably see the Yankees leaving Brooklands somewhat depressed. CLIFFORD WILSON.

WHERE TO GO FOR SUMMER.

Sir.—As a reader of *The Motor Cycle*, I should like to take this opportunity of telling your London and district readers of a county in England really worth visiting.

Residents of London most probably take their motor cycle rides in such counties as Surrey, Sussex, Essex, and others. Though I must admit that the scenery there is very beautiful, yet I fully believe that Derbyshire stands foremost as England's most beautiful county.

In spite of its hills, Derbyshire is a very pleasant county in which to motor cycle; in fact, nearly all the hills have an "opposite," before and after, so they may be easily "rushed."

Such places as Haddon Hall, Chatsworth House, and all places round Buxton and Matlock are perhaps the best parts of Derbyshire.

Finally, the moors are not, as everyone supposes, the northern lands corresponding to the southern downs. On the contrary, they are very picturesque, having a beauty of their own. They are also very healthy, and have an ideal summer temperature.

I strongly advise anyone who has not been to this county, prior to reading this, to go. A. R. INNES-SMITH.

HEAVY HAULAGE WORK BY A SIDECAR.

Sir.—Noticing in a recent issue of *The Motor Cycle* that a 7-9 h.p. Indian sidecar, driven by Mr. Hugh Sharrock, towed a 44 ton barge a distance of one mile on the Leeds-Liverpool canal, it may be of interest to your readers to hear that I recently towed a Sizaire-Naudin two-seater motor car (having a broken shaft), weighing about 15 cwt., with its driver, Mr. H. J. Palmer, weighing 13½ stone, with my 1915 7-9 h.p. Harley-Davidson sidecar, from Fenny Stratford to Streatham Hill, a distance of fifty-five miles.

We had to invite the kind assistance of motorists with high-powered cars up four hills, but, with these exceptions, the H.D. was quite equal to its difficult task, and is none the worse for its "day out." My own weight is nearly 12 stone and the outfit over 3 cwt., so that the entire load was over 1 ton, and for a considerable part of the journey we were doing twenty miles per hour, and at times reached twenty-three.

I think the performance says volumes for the power and reliability of the Harley-Davidson. I might mention that I have no interest in the Harley-Davidson Motor Co.

FREDK. S. HENNIKER.

LEVER-OPERATED FLASH LAMPS.

Sir.—With reference to "Ixon's" remarks on the repair of lever-operated flash lamps, I experienced the same trouble on dismantling mine, but found that if the lever is allowed to remain out, instead of pressed home, the pressure on the

This diagram explains Mr. Henderson's remarks in reply to "Ixon's" query regarding hand-operated flash lamps.

spring inside will be removed, allowing the cover to be dismantled easily without the movements jumping out. The chief trouble is in the free wheel gear, which is of poor design, no doubt for cheapness sake. I wear one out in a fortnight, but retailers, I understand, repair these free for twelve months, so buyers should see that they keep their receipt. The magnets used are of the permanent type, and after much use may need remagnetising. The lamp has severe usage due to the excessive voltage at times when the lever is worked hard, so a new lamp might be necessary after a time, otherwise candle-power should not drop with use as batteries do. A new type of lever flash lamp has a flywheel which keeps the light going for thirty seconds after one has pressed the hand lever.

S. HENDERSON.

THE CHAIN DRIVE TRIUMPH ON THE ROAD.

Sir,—I fear Mr. Heath has misread my letter.

I have every reason to believe that my gear box is not "mechanically wrong" in the sense in which your correspondent uses the expression.

It is a fact that: (a) I found a clutch lever quite soon after receiving the machine.

(b) I cannot change down without using the exhaust lifter. The Triumph instruction book definitely tells one to use the exhaust.

(c) I cannot move the gears into neutral when the engine is running and the machine stationary. Mr. Heath says the last statement is "ridiculous," which is, I think, not very courteous of him.

I must point out that your correspondent's ideas on changing down are a little hazy. He says: "When using the exhaust . . . the action . . . is too quick to cause any check in the acceleration of the machine."

Now,

(1.) One does not change down when the machine is accelerating.

(2.) The shock which occurs on changing down "on the exhaust" is due to the sudden speeding up of the engine by the machine. In order to change down without a shock the speed of the engine must be increased about 70% whilst the gear is being moved. It is obviously impossible to obtain this increased engine speed by raising the exhaust. As I pointed out before, it would be fairly easy to change down if a neutral position could be obtained between the gears.

It would certainly appear that Mr. Heath's machine is of later date than mine and that the obvious defect has been removed. It certainly was present in some of the S.D. machines, and I still think it is incomprehensible that the manufacturers should have overlooked it.

As to gear ratio, Mr. Heath misses the point entirely.

A 4.75 to 1 gear is not comfortable on a solo single-cylinder machine. It is a question of engine balance and not of chain snatch. I feel sure that the Triumph drive is so excellent that it would easily stand a 4.25 to 1 ratio, and, after all, there is the gear box for very low speed work.

I think I expressed my admiration of the Triumph Co.'s products (I have ridden them since 1906), but I do not think that honest adverse criticism should be withheld or considered unfair.

The use of the exhaust lifter for changing down (unless an inter-gear "neutral" be possible) is absolutely wrong and in direct opposition to the most elementary principles of gear box operation.

C. H. STEPHENSON.

Sir,—Mr. Heath seems rather scornful of Mr. Stephenson's remarks *re* gear changing in the chain drive Triumph, and I would like to support Mr. Stephenson in what he says. I have ridden a chain-driven Triumph every day for the last six months, pottering around mostly in hilly country (I am a doctor). I find that gear changing with the clutch may be managed occasionally, but is not to be depended on, and until I found this out I was baulked on many a hill and corner. The Triumph depot informed me that the clutch is only meant for starting away on. One can change through neutral into second on the clutch, but, apart from that, one must depend on the exhaust lifter, which gives a harsh change in changing down, so harsh sometimes (depending on one's speed) that the spring drive will not take it all up, and the tyre can be heard to "rip"—a momentary skid. If one wishes to coast downhill one cannot come from top to neutral without coming through second; the engine "revs." furiously then for a few seconds; then the gears subside into neutral. This with the clutch well out.

I am sorry I have not been so fortunate as Mr. Heath or Mr. Stephenson with my chain case, which leaks oil steadily, and has done since the first day I filled it.

But even with these drawbacks I would not change my mount for another.

Leeds.

DOC.

Sir,—With reference to Mr. H. Heath's letter, I should like to endorse thoroughly his remarks *re* the absolute reliability of this machine. I have now had my machine some four months, having covered in that time nearly 4,000 miles without any mechanical trouble whatever, and the machine still runs as well as ever.

During Whitsun week I made the journey from Birmingham to Aberdovey and back four times, including

trips around some stiff portions of the Welsh roads, and the outfit took me there and back each time in five and a half hours, without trouble or effort.

I experienced a little trouble with changing down the gears when the machine was new, but by adjusting the clutch to pull well out I can now change down very easily, using the exhaust lever for starting purposes only. To ease the gears when the machine was new, I always pulled the lever from high to neutral and then into middle in one back and forward motion, *i.e.*, no stop in neutral.

I find, however, that my machine makes carbon very quickly, although I only give it a half pump of oil each five miles; and shall be glad if any of your correspondents can give me any tips *re* this. Possibly using the machine for constant town work with much stopping and starting, and the resultant rich mixtures, may account for this.

Like Mr. Heath, I find the chain drive wonderfully sweet and efficient, whilst the brakes are excellent, and such little items as the decompressor, sprung footboards, absence of vibration, etc., are boons that can be thoroughly appreciated. I may say that, pulling a well-laden Cooper sidecar, I average seventy-five miles per gallon. I have no connection with the Triumph Co. beyond being another satisfied user of their productions.

A. V. BASE.

THE T.T. RACES.

Sir,—Your correspondent Mr. H. G. Kelley, writing about the T.T. races, makes the common error in condemning the races as valueless to the ordinary purchaser, simply because in many cases the T.T. models bear very little external resemblance to the model sold to the public.

The races are undoubtedly a means of testing the efficiency and reliability of new designs, portions of which will find their way into the touring models.

Surely the firm able to produce a design capable of the performance of the little A.J.S. in the T.T. races is also capable of benefiting by such experience, and putting on the road a touring machine of equal reliability.

Mr. Kelley would have our manufacturers stick in the rut, and evidently conduct no experiments in public, which is surely the correct use of the T.T. Usual disclaimer.

T. F. GROOCCOCK.

Sir,—I have been keenly interested in the T.T. races, both Junior and Senior, but have come to the conclusion that they are rather more like speed races than efficiency tests.

In most cases the motor cycle entered is manufactured especially for the occasion, and as soon as the race is over the machine is forgotten (except for advertising purposes), and the manufacturers go on making the same old type, with no improvements whatsoever, which points that they enter their machines just for the advertisement. How, therefore, can this make machines more efficient?

Why not make it a rule to have a stock machine only, also have riders not quite so expert, but by all means capable of the job? Then, perhaps, several machines will be improved.

CHARLES SANDERS.

MATCHING THE TANK—ON A SCOTT SIDECAR!

Sir,—In a recent number of *The Motor Cycle* there appeared an illustration of a Wooler motor cycle with sidecar designed

A sidecar body "design."
(See letter from Mr. W.
Stanley Sykes.)

to match the tank. I enclose a sketch showing the idea applied to a Scott.

W. STANLEY SYKES.

JOURNAL BEARINGS FOR HUBS.

Sir,—We have been interested to read the letters in recent issues of *The Motor Cycle* dealing with the question of ball bearings in motor cycle hubs, and we are sure that your correspondents will be interested to hear our experience as bearing manufacturers with this particular type of application.

In the first place, there is no reason at all why the recognised type of ball bearing as used in gear boxes should not be a success for this purpose; and, in fact, it is infinitely superior.

The cup and cone type of bearing is wrong in design and principle, and in addition to this is usually made of inferior material and not made by a ball-bearing manufacturer.

We feel sure that if the average motor cyclist who takes a personal interest in his machine once had standard bearings fitted he would never consider buying a machine fitted in any other way.

The results of our own experience will undoubtedly be of interest to your readers, and we give you as follows particulars of an experimental test which we recently completed with an 8 h.p. 1921 side-car outfit.

This machine was delivered to our works fitted up with the old-fashioned type of cup and cone ball bearings in all three wheels. After 1,500 miles these had worn badly, and we replaced them with the same type of bearing which

failed again at a further 1,400 miles. We then dismantled the hubs in question, and fitted them up with our standard ball bearings on the lines which we recommend to all our customers who are interested. This last set of bearings, which were of our standard single row type, have now completed nearly 4,000 miles, and their condition is as perfect as the day in which they were put in.

In addition to this, we have never oiled or lubricated the hubs in any way, and the amount of vaseline grease which has worked out during this period is practically negligible.

We are enclosing a drawing on which we show the way in which we mount our bearings for this purpose, and in conclusion we would state that there are three main conditions which are necessary to obtain good results, namely: (1) The bearings must be fitted correctly, both with regard to the inner and outer races; (2) the thrust should be taken on one race only; and (3) ample and adequate provision must be made for excluding road dirt and water, and retaining the original pure mineral grease which we use for ball bearings.

If these conditions are complied with there is no reason whatever why the hub fitted in this way should not run for the life of the machine without any attention whatever. Not even lubrication is necessary, which frequently does more harm than good.

If any of your correspondents would care to send their bearing problems to us we are ever ready to give the best of our advice and experience.

RANSOME AND MARLES BEARING CO., LTD.

Sir,—Your correspondent "G.M.R." is, I notice, an ardent supporter of the cycle-type design of ball bearing.

Applied to cycles, and made of the best materials, and to fine limits and finish, this type of bearing will give good service, in such an application. The design is all right.

This type often suffers because the nature of the bearing—with its adjustability and accommodating nature—is apt to invite a degree of coarseness in manufacture, which would either prevent assembly or give rise to an unacceptable slackness in the journal type. It is not uncommon to find unground cups on some of the cheaper cycles, cones are out of truth relative to the spindle, hardening is "doubtful," and the bearing is handicapped from the start. The journal bearing, on the other hand, is most precisely made by specialists who have evolved it and its manufacturing processes through many years of tedious experimenting.

A journal bearing hub described by Ransome and Marles.

Your other correspondent "Draughtsman," in expressing his view that the motor cycle designer has not sufficient ability to design journal bearings, errs chiefly in the use of the word "ability" in place of "experience," although the lack of ability, characterised by many designs, is certainly apparent.

Every engineering and motor car firm, and even aero engine manufacturers, are content to purchase their journal ball-bearings from specialists, and glad they haven't got to make them.

It is unfortunate for the arguments of "G.M.R." that, of the firms listed in his very superior manner, the very first, the A.J.S.—which was so consistently brilliant in the T.T.—was equipped with Skefko ball-bearings, and not with the cycle type.

The extraordinary care and ability displayed in the preparation and design of these machines appear to indicate that their experienced manufacturers had their doubts about the suitability of the cup and cone type.

I have no axe to grind for A.J.S. or Skefkos, neither am I prejudiced against people from Dalmeir, but I have suffered much from the defects of cup and cone bearings on push bicycles, motor cycles, and the stub axles of cars. R.M.

West Hampstead.

FROM THE MECHANICAL ENGINEER'S POINT OF VIEW.

Sir,—I agree with "Aileron's" remark about two-stroke machines being a "breed" of "cycle." May I say that motor cycles should be designed to be driven by the average man along the King's highway, not coddled and driven by men with technical knowledge. It is an advantage to have such knowledge, but should not be a necessity.

I should like to see a 26in. x 2 1/2in. wheel standardised for lightweights, using the new type Dunlop cover (with flat base rim detachable flange) and fitted with the Schrader valve, thereby enabling the tyre to be pumped to the correct pressure by using the Schrader pressure gauge.

With the use of this rim comes the problem. Which spoke system should be used? The illustration (fig. 1) shows the round base pattern. This type supports the rim well, but is not so strong laterally as the "cycle" type (fig. 2), which type, however, does not support the rim well.

Is it possible that it would be found better to construct the wheel as in fig. 3, thereby making the wheel stronger. Fig. 4 shows the R.W. detachable wire wheels.

Salford.

DRAUGHTSMAN.

[Specialists in wire wheel building have found the type suggested to be prone to rim buckling.—Ed.]

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from LILFEE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

CONVERTING MAGNETO TO DYNAMO.

? Would it be possible and require much alteration to convert an ordinary single magneto into a dynamo to change a six-volt 80 amp. accumulator?—J.K.

Possibly the magneto can be converted into a charging dynamo, but it is doubtful whether it would be suitable for charging a six-volt accumulator, as the H section armature and permanent magnets are not particularly efficient for this purpose. A commutator would also be required in order to rectify the alternating current, and this has to be of special design to avoid shorting the battery at certain positions.

M.E.P.

? Will you advise me what is meant by "the mean effective pressure" of an internal combustion engine?—W.J.C.

The expression "mean effective pressure" refers to the average pressure in lb. per square inch exerted on the piston throughout the complete cycle of operations. The formula giving m.e.p. at any r.p.m. is:

$$\frac{16,520,000 \times \text{B.H.P.}}{D^2 \times S \times N \times \pi}$$

Where D = cylinder bore, S = stroke, N = r.p.m., and π = number of cylinders.

VALVE TIMING AND ADJUSTMENTS.

? (1.) What is the correct timing of the 1914 single-cylinder 3½ h.p. Rover? (2.) The two cam wheels which operate the rocker arms are not quite alike; one lifts the rocker arms for a longer period than the other. Which one belongs to the inlet and which to exhaust? (3.) After two or three miles running, a grating, unpleasant sound develops in or about the inlet valve or tappet. Could you suggest a remedy?—R.W.

(1.) Time the valves so that the exhaust is just closing and the inlet just about to open when the piston is on top dead centre. (2.) The cam which gives the shorter period of lift is the inlet. (3.) The noise is probably due to the unlubricated state of the valve stem or the tappet; if the latter, a cure should be effected by introducing oil to the tappet guide. If the noise arises from the valve stem itself, it may best be lubricated by the addition of a small quantity of lubricating oil to the petrol; very little should be used, merely sufficient to give the petrol a pale yellow colour.

TWIN FIRING ON ONE CYLINDER.

? A 2½ h.p. Douglas recently refused to run with the air control open, and misfires on the front cylinder, which makes the machine noisy, excessively hot, and lacking in power. I have had the engine down, decarbonised cylinders, piston heads, and inside piston, scraped piston rings, reground all valves, adjusted tappets, and can confidently state that there are no leaky joints. The carburetter is a 1921 Amac, recently fitted; the magneto has been examined, and the collector ring and carbon brush cleaned. After reassembling, the same misfiring and refusal to take air occurred.—W.H.D.

If you are quite sure that there are no air leaks between the carburetter and the cylinders, it would appear that the jet is too small, or that the fuel supply is restricted. These details should be carefully checked. We presume that the carburetter is one specially made to suit the Douglas engine, as it is very necessary that it should have the correct size of choke. The details you give are so complete that there is apparently nothing wrong with the engine, and it is, therefore, extremely difficult to suggest even a possible cause of the trouble. You

might, however, verify the petrol supply and see that it is unrestricted. A tight fitting tank filler cap, causing air lock, a partially choked filter in either pet tap or float chamber union, would doubt cause the trouble.

GEAR RATIOS FOR SMALL TWIN SIDECAR.

? What number of teeth required on an engine sprocket of a 4 h.p. twin Precision engine to get a 5 to 1 top gear with Sturmey-Archer gear box, ¾" x chain, 8in. pulley, and 16in. belt wheel on a 26 x 2½in. tyre? I drive a coach sidecar, and if you think this gear high or low, will you say what would be best?—F.K.

Preferably, the top gear should be a 5½ to 1; but if you must use the belt pulley with back wheel you require a 12 T. sprocket on the engine in order to obtain a gear of 5 to 1, and is inadvisable to use a smaller sprocket. We would recommend you to use a much larger belt drum on the back wheel. We assume, of course, that your gear has a 30 T. sprocket on the chain, although you do not mention it. Instructions as to the determination of gear ratios will be found in the latest edition of "Motor Cycles and How to Manage Them."

T.C. Greenwood (4½ Sunbeam) making fastest time of the day at the Birmingham M.C.C. hill-climb at Camden Hill, Ilmington.

HIGH PETROL CONSUMPTION.

[?] At Easter I purchased a new 2½ h.p. two-stroke machine, and, using a No. 25 jet, the petrol consumption has been 50-60 m.p.g. throughout. Can you tell me how to improve this? There is no flooding at the carburetter, and I always run with the air fully open. There is no undue friction in the machine, and the compression appears to be quite good.—F.C.W.

Two-stroke engines consume a greater quantity of petrol than four-stroke machines of similar size, and we do not think that you will improve matters by using a smaller jet, as the one you have is slightly smaller than the size usually used to give maximum power. It is, of course, necessary that the ignition should be as far advanced as possible; belt slipping also should be eliminated. Try the effect of lowering the level slightly.

AN UNEXPLAINED BREAKAGE.

[?] The engine of my 1916 3½ h.p. outfit was overhauled at the makers' works, and the machine then went splendidly for 700 miles with no trouble at all. I took the machine to a garage to have two new spokes in the back wheel. When driving it home, about a mile from the garage, there was a short preliminary grating, and then the engine stopped. I pushed it home, and, after dismantling, it was found that the ball bearing on the timing side of the engine was disorganised (broken balls and ball races). On examining the back wheel, it had been replaced at quite an appreciable distance behind the usual position, thus tightening both chains. Do you think this is the cause of the broken ball bearing? There was plenty of oil inside the engine.—NOVICE.

We fail to see how the readjustment of the back wheel could in any way affect the tension of the front chain and so cause the damage to the engine, unless the gear box also was moved. Probably the trouble is one of the variety which occasionally arises, and for which there is no satisfactory explanation. It would be best to return the broken ball race to the manufacturers for their inspection.

EXPERIENCES WANTED.

"F.C.C." (Leeds).—A.B.C. (1920 model), valve and ignition timing, most suitable gear oil and chain lubricant; possibility of obtaining an instruction booklet.

"C.V." (Highgate, N.19).—Raleigh used with sidecar, especially the comfort of spring frame.

READER'S REPLY.

VIBRATION AND LACK OF POWER.

Regarding "H.P.W.'s" query concerning the 3½ h.p. 1911 Humber, I am also in possession of one, and I always ride with one passenger (sometimes two), and often with a quantity of luggage in the sidecar, which is coachbuilt. I never got out of my way to avoid a hill, and have had no overheating trouble; only once, at midnight, on a strange hill, have I failed. I have never had the lightest trouble with vibration. Are our querist's ball races on mainshaft in

 Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.
 Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.
 Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.
 Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.
 Thurs. Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.
 Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.
 Thurs., Sept. 8th—Norfolk M.C.C. and L.C.C. Open Speed Trials.
 Sat., Sept. 10th—North-Western Centre A.C.U. Open Speed Trials.
 Sat., Sept. 17th—Grand Prix Race for Cycle Cars.
 Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.
 Sat., Sept. 24th—M.C.C. Sporting Trial.
 Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

good order? I time my inlet to open ¼ in. before top centre, and I use a Senspray carburetter, paying no special attention to the make of oil, and using any brand of petrol.—C. CLARK.

RECOMMENDED ROUTES.

GRANTHAM TO GUILDFORD.—J.H.B.
 Grantham, Colsterworth, Stamford, Wansford, Peterborough, Norman Cross, Stilton, Alconbury Hill, Buckden, Eaton Socon, Biggleswade, Baldock, Stevenage, Welwyn, Hatfield, St. Albans, Radlett, Elstree, Bushey Heath, Harrow and Wealdstone Station, Sudbury, Ealing Common, Gunnersbury Avenue, Gunnersbury Lane, Kew Bridge Station, Kew Bridge, Kew, Richmond, Petersham, Kingston-on-Thames, Esher, Cobham, Ripley, Clandon Cross Roads, Guildford. Approximately 148½ miles.

LEICESTER TO PORT SUNLIGHT.—AY 5979.

Leicester, Groby, Hugglescote, Ashby-de-la-Zouch, Burton-on-Trent, Tutbury, Sudbury, Uttoxeter, Longton, Stoke, Newcastle-under-Lyme, Betley, Nantwich, Tarporley, Tarvin, Chester, Eastham, Port Sunlight. Approximately 104 miles.

KING'S NORTON TO CATFORD.—P.E.P.

King's Norton, Studley, Alcester, Stratford, Wellesbourne, Kineton, Warmington, Banbury (near edge of) Adderbury, Aynho, Souldern, Bicester, Waddesdon, Aylesbury, Wendover, Great Missenden, Amersham, Beaconsfield, Farnham Common, Farnham Royal, Salthill, Eton, Windsor, Staines, Sunbury Common, Hampton, Hampton Court, Kingston, Norbiton Church, New Malden, Worcester Park Station, Cheam Common, Cheam, Sutton, Carshalton, Wallington, Waddon Station, Coombe Lane Station, Addington, Bromley, Catford. Approximately 140½ miles.

Sidecar Taxis for Northampton.

A County (B.S.A.-Canolet) taxi-sidecar outfit has received the approval of the Watch Committee and the Chief Constable of Northampton.

Tyre Successes in Racing.

After successes in the T.T. and the 500 miles race at Brooklands, Hutchinson tyres were used with success at St. Andrews, when they were fitted to all three machines, winning the various Scottish speed championships.

Over One and a Half Million Sparks.

A twin-cylinder machine which completed the 500-mile race at Brooklands would require approximately 1,698,750 sparks from its magneto. This quantity was evidently delivered by the M-L magnetos on each of the three Martinsyde machines which comprised the only team to finish complete. How was the number arrived at? We did not count, but perhaps the riders relieved the monotony by working it out!

Chain Improvements.

Chains would not seem to be capable of much improvement, but Hans Renold, Ltd., of Manchester, have found means to better their products, which are already accepted as a standard of quality all over the world. A considerable increase in the breaking strength of all the chains has been effected, and a much improved form of spring connecting clip has been standardised. The latter was illustrated in our Olympia Show reports last December, when it was first shown to the public. Chain users should make application for the latest price lists, and the recently published leaflet entitled "Progressive Design."

A Lightweight Sidecar.

In response to requests from riders of Silver Prince lightweights, the makers (the Tryus Cycle Co., of Johnstone Street, Birmingham) have introduced a suitable sidecar, equipped with apron, small celluloid screen, and lamp-bracket; quickly detachable fittings are included. Legshields to suit these motor bicycles also are now available.

Makers of a Popular Flat Twin.

The Coventry-Victor motor cycles are manufactured by the Coventry-Victor Motor Co., Ltd., of Cox Street, Coventry, and not by Morton and Weaver, Ltd., who are associated with them in the production of the Coventry-Victor flat-twin engine only.

Catalogues Received.

Wulfruna Engineering Co., Ltd., Wolverhampton: A new catalogue of Wolf motor cycles announces that the model fitted with 2½ h.p. Blackburne engine, Sturmev-Archer two-speed gear, clutch, kick-starter, and long exhaust pipe, is reduced in price by £15 15s.

Club News

A popular Midland "works" event is the Humber Trial, held annually for the Humber Challenge Trophy. The illustration depicts some of the 69 competitors at the start.

Manchester M.C.

The postponed trial for the Ferodo Cup was held on July 10th. There were thirty-five entries for the run over a course of seventy-six miles. Of the twenty survivors the best performance was put up by O. E. Carter (3½ O.C.-J.A.P. sc.) with an error of 8s.; E. F. Gunton (3½ Duzmo) came second with an error of 21s.; and M. Gavson (4 Triumph) third with an error of 50s. The Orr gold medal for the best "novice" was won by H. Scholes (4 Triumph) with an error of 1m. 39s.

Lewes and District M.C.C.

A reliability trial on the 13th inst. followed a sixty-mile secret course. There were several observed hills and secret checks. Results:

1, Lewis Humphries Cup, G. Patrick (3½ Bradbury); 2, silver medal, E. Jenner (2½ Royal Ruby); 3, bronze medal, V. H. Danes (2½ Alldays Alloy).

Taunton and District M.C. and L.C.C.

A hundred miles reliability trial was held on a recent afternoon. The course was divided into two sections; the first included the famous Brendon and Elworthy Hills, whilst the evening course took the competitors up Snowdon and across the top of the Blackdowns. There were six checks, and the awards were given on points. Twenty competitors started, including one light car, and fifteen checked in at night. Provisional results: Silver medal, S. Goodman (3½ Sunbeam); bronze medals, S. H. Easton (3 A.B.C.) and W. T. Drayton (3½ Triumph). Drayton was the only competitor to ride a pre-war machine, his mount being a 1914 hub gear model.

On the evening following the A.C.U. general meeting, which was held at Taunton, the members of the committee were taken for a run by members of the club, after which they were entertained to an enjoyable musical evening at the local headquarters, Col. Brereton presiding.

Scarborough and District M.C.

The results of the trial held at the beginning of the month are as follows:

CLASS 1 (up to 350 c.c.).—1, G. Jackson (3½ Beardmore-Precision); 2, M. Huntrod (2½ Sun-Villiers); 3, D. Brigham (2½ Omega-Jap).

CLASS 2 (Solo Machines, any c.c.).—1, B. Wilson (4 Blackburne); 2, H. Blackburn (4 Triumph); 3, P. H. English (4 Triumph).

CLASS 3 (Sidecars and Runabouts up to 1,000 c.c.).—1, F. Waters (8.7 G.N.); 2, W. Marriott (4 Norton sc.); 3, J. Horner (3½ Norton sc.). Waters and Marriott tied, but the former wins on secret check.

Week-end Club Events.

July 30.—Harley-Davidson M.C.C. Run to Margate.
July 30.—Saltcoats and District M.C.C. Sporting Trial.

July 30.—Bishop Auckland and District M.C. Run to A.C.U. Hill-climb.

July 30.—Public Schools M.C.C. Night Trial.

July 30.—Deesbury and District M.C.C. Picnic.

July 30.—North Lindsey A.C. Run to Rosedale Abbey.

July 30-Aug. 1.—Berwick and District M.C. Three Days Trial.

July 30-Aug. 1.—Northern M.C. (Newcastle). Week-end at Edinburgh.

July 30.—Wollington and District M.C.C. Reliability Trial.

July 31.—Bridgnorth and District M.C.C. Rally.

July 31.—Hull and District M.C.C. Run to Morecambe.

July 31.—Central London M.C.C. Run to Fensham Ponds.

July 31.—Essex M.C. Picnic.

July 31.—Kidderminster M.C.C. Social Run.

July 31.—Canterbury and District M.C.C. Hill-climb.

July 31.—Eccle M.C. and J.C.C. Run to Dulverton.

July 31.—Helensburgh M.C.C. Club Run.

July 31.—Shepley and District M.C. Club Run to Snake and Glossop.

July 31.—Wakefield and District M.C.C. Club Run to Skegness.

July 31.—Woolwich, Plumstead and District M.C. Club Run to Hastings.

July 31.—Basingstoke and District M.C. and L.C.C. Club Run to Alms Hill.

Aug. 1.—Ikley M.C. and L.C.C. Social Run and Gymkhana.

Aug. 1.—Liverpool M.C. Impromptu Programme.

Aug. 1.—Bristol M.C.C. Club Run and Picnic.

Aug. 1.—York and District M.C. York-Edinburgh-York Trial.

Aug. 1.—Taunton and District M.C. and L.C.C. Inter-club Reliability Trial.

Aug. 1.—Doncaster and District M.C.C. Third President's Cup Trial.

Aug. 1.—Neath and District M.C. Reliability Trial.

Surbiton and District M.C.C.

On the 6th of this month, as reported in our issue of the 14th inst., a reliability trial for the Butler Cup was held. In the paragraph in question, the name of this award was inadvertently referred to as the Briller Cup.

Abergavenny and District M.C. and L.C.C.

On August 11th this club is holding a hill-climb at Plough Hill, near Abergavenny, open to members of affiliated clubs of the South Wales Centre A.C.U. Mr. W. H. Powell, The Garage, Abergavenny, is joint hon. secretary for the event.

West Fife M.C.

Over ninety entries were received for the very successful hill-climb, held under the auspices of the above club at Powmill. The hill is approximately 600 yards long with a gradient of 1 in 14. Some excellent times resulted.

SOLO CLASSES.

350 c.c.—Confined: 1, J. Inglis (2½ H.B.); 2, D. Douglas (2½ H.B.). Open: 1, W. Peet (2½ H.B.); 2, C. Cardosi (2½ Douglas).

600 c.c.—Confined: 1, J. Morgan Phillips (3½ Sunbeam); 2, J. Reid (3½ Norton). Open: 1, J. Morgan Phillips (3½ Sunbeam); 2, J. Reid (3½ Norton).

1,000 c.c.—Confined: 1, J. Morgan Phillips (3½ Sunbeam); 2, J. Reid (3½ Norton). Open: 1, J. Morgan Phillips (3½ Sunbeam); 2, R. Stewart (3½ Norton).

SIDECAR CLASSES.

Confined: 1, C. Cardosi (7-9 Harley-Davidson sc.); 2, M. Matroni (7-9 Harley-Davidson sc.). Open: 1, C. Cardosi (7-9 Harley-Davidson sc.); 2, M. Matroni (7-9 Harley-Davidson sc.).

Humber M.C. (Coventry).

Results of the trial referred to last week are now to hand, and are as follows:

WINNER OF CHALLENGE CUP.—C. Gore Brown (4½ James).

CLASS A: SOLO MACHINES.—1, W. Sleat (2½ Sun-Precision); 2, C. Merrett (4½ Humber); 3, E. Marshall (4½ Humber).

CLASS B: SIDECARS.—1, F. Arbuckle (4½ Humber sc.); 2, A. Edwards (4½ Humber sc.); 3, F. W. Norris (4½ Humber sc.).

MEDAL for Best Performance on a Lightweight.—N. W. Drake (2½ Allon).

All decisions arrived at as results of two secret checks. Eighteen lost marks.

A Section devoted to Club Announcements will be found on Supp. xliii.

Club News.—

Sheffield and Hallamshire M.C. and L.C.C.

On Friday midnight sixteen competitors started from Sheffield for Holyhead and back; they were faced with a gusty wind and a promise of rain, which rendered the journey a strenuous one.

North London M.C.C.

A merry little party left the "Cherry Tree," Southgate, during last week-end, for a run to Epping Forest. An enjoyable picnic was held beneath the shady trees, and after a "look round" the route home was taken through Waltham Cross and Enfield.

Ulster M.C.C.

The two-day open speed trials held on Magilligan Sands on the 15th and 16th inst. attracted a large entry, and some very keen racing was witnessed. Friday's three scratch races resulted as follows:

FIVE MILES SCRATCH RACE (350 c.c.)—1, H. Chambers (2½ A.J.S.), 2, J. Calder, Edinburgh (2½ New Imperial), 3, F. J. Newell (2½ Beaumont).

FIVE MILES SCRATCH RACE (UNLIMITED)—1, J. W. Shaw (3½ Norton), 2, S. J. Redmond, Dublin (3½ Indian).

FIFTY MILES CHAMPIONSHIP OF ULSTER.—1, H. Chambers (2½ A.J.S.), time 55m. 25s.; 2, J. W. Shaw (3½ Norton), 56m. 5s.; 3, J. Calder (2½ New Imperial).

On the following day H. R. Chambers (2½ A.J.S.) was again successful, winning the 350 c.c. mile handicap. J. W. Shaw (3½ Norton) won the other two events—the unlimited flying mile and the fifty miles handicap.

Rochester, Chatham, and District M.C. and L.C.C.

Among the 500 or so spectators who witnessed the recent hill-climb was a char-a-banc party, making it appear that the day tripper is getting interested in "things motorish." There were seventy competitors, including one lady, Mrs. Lawson (4 Triumph), who made quite a good performance. Results:

CLASS 1: 350 c.c.—1, A. Ernens (Ivy), 36s.; 2, B. Ball (Douglas), 39s.; 3, C. Watson (A.J.S.), 40s.

CLASS 2: 600 c.c.—1, E. Newman (Sunbeam), 29s.; 2, A. J. Clarke (Triumph), 32s.; 3, E. Vills (A.B.C.), 32s.

CLASS 3: TOURING.—1, G. Skinner (Triumph), 33s.; 2, A. J. Clarke (Triumph), 34s.; 3, H. Bradley (Indian), 36s.

CLASS 4: SIDECARS.—1, D. Potts (7-9 Harley-Davidson), 39s.; and A. J. Clarke (Triumph), 39s., tied; 3, B. Ball (Indian), 40s.

CLASS 6: UNLIMITED SOLO.—1, E. Newman (Sunbeam), 28s.; 2, G. Maund (A.B.C.), 29s.; 3, B. Ball (Indian), 31s.

Stafford and District M.C.C.

The results of the hill-climb held on July 9th at Cromber Hill, Milwich, are as follows:

275 c.c. CLASS.—1, N. Savage (2½ Sun-Villiers), 38s.; 2, T. Venables (2½ Sparkbrook), 44s.

350 c.c. CLASS.—1, D. Amies (2½ Hoskison), 36s.; 2, K. Amies (2½ Royal Ruby), 38s.

600 c.c. CLASS.—1, E. H. Bunn (3½ Norton), 27s.; 2, R. Simpson (4 Triumph), 32s.

UNLIMITED SOLO.—1, E. H. Bunn (3½ Norton), 28s.; 2, R. Simpson (4 Triumph), 30s.

SIDECARS (600 c.c. CLASS).—1, R. Spooner (4 Triumph), 51s.; 2, R. H. Leech (4 Douglas), 54s.

SIDECARS (UNLIMITED).—1, H. D. Clewlow (4 Blackburne), 36s.; 2, R. Bassett (5-6 Zenith), 38s.

The Pyrah Challenge Cup for two-strokes under 275 c.c. was won by N. Savage (Sun Villiers) in 38s. Fastest time of the day was made by E. H. Bunn (Norton) in 27s., thus winning the President's Prize, also the Attwood Challenge Cup for solos under 600 c.c.

North-western Centre A.C.U.

On the 7th prox. a hill-climb will be held on Axe Edge, near Buxton, commencing at noon. Mr. G. E. Watts, Balmoral House, Mottram Road, Stalybridge, is secretary for the event.

Evesham M.C.C.

There were between thirty and forty entries for the first reliability trial of this newly formed club, held on Friday evening. The course, which was over some rough Cotswold country, included Sudeley Hill and a watersplash, and was of about thirty miles in length. The results were:

LIGHTWEIGHTS.—1, G. C. Hill (2½ Spartan-Blackburne), 95 points.

UNLIMITED SOLOS: 1, Tim Robbins (4½ B.S.A.), 100 points; F. G. C. Phillips (4 Triumph), V. Morrall (4½ B.S.A.), A. Haines (4½ B.S.A.), D. W. Knott (3½ Scott), and J. A. Chadwick (4 Wilkin-Blackburne), 99 points each.

SIDECARS UP TO 5 H.P.—1, A. Sharp (4 Triumph), 99 points.

SIDECARS OR LIGHT CARS UP TO 10 H.P.—1, J. M. Bacon (8 Enfield).

Ipswich and District M.C.C.

The club held its first speed trials at East Bergholt on July 9th. There were seventy-seven entries, but the electrical timing apparatus failed at the last moment, and this caused some delay. The distance was 1,093 yards over a straight and level course. The surface was rather loose in places. Results:

600 c.c. SIDECARS.—1, R. F. Fenn (3½ Triumph sc.), 45s.; 2, E. C. Rose (3½ N.U.T. J.A.P. sc.), 45s.; 3, C. O. Rose (4½ Dunell sc.), 51s.

750 c.c. SIDECARS.—1, R. F. Fenn (3½ Triumph sc.), 47s.; 2, E. C. Rose (3½ N.U.T. J.A.P. sc.), 47s.; 3, G. Goddard (4 Triumph sc.), 50s.

1,000 c.c. SIDECARS.—1, C. Dansie (7-9 Harley-Davidson sc.), 41s.; 2, A. G. Mann (5 Zenith sc.), 45s.; 3, D. Cornell (8 New Imperial sc.), 46s.

SOLO TWO-STROKES.—1, J. F. Rose (4½ Dunell), 47s.; 2, C. O. Rose (4½ Dunell), 50s.; 3, B. Adams (2½ Excelsior), 52s.

350 c.c. SOLO.—H. R. Keer (2½ Douglas), 45s.; 2, D. Potter (2½ Douglas), 47s.; 3, H. B. Pick (2½ Douglas), 51s.

600 c.c. SOLO.—1, B. A. Hatcher (4 Triumph), 34s.; 2, L. C. Solomon (3½ Norton), 35s.; 3, F. K. Portway (3½ Norton), 36s.

750 c.c. SOLO.—1, B. A. Hatcher (4 Triumph), 34s.; 2, L. C. Solomon (3½ Norton), 34s.; 3, A. G. Mann (5 Zenith), 37s.

C. Dansie (7-9 Harley-Davidson sc.) secured the special prize for fastest sidecar time, and L. C. Solomon (3½ Norton) was awarded the special prize for fastest time on a gear box model.

Triumph Club (Motor Section).

Over 150 employees of the Triumph Co. and their friends attended the inaugural run of this club. Several interesting competitions were held during the afternoon, which concluded with tea at the Round Tower, Edge Hill. Mr. Harold A. Smith is honorary secretary.

West Birmingham M.C.C.

Results of the trial for the Hereford Cup, held on the 17th inst., have now been confirmed.

THE HEREFORD CUP.—T. A. Mackenzie (3 A.B.C.), with 100% marks and first on acceleration.

OVER 450 c.c.—Silver medal: 1, R. G. Smith (3½ Sunbeam). Bronze medal: 2, J. A. Ainscov (4 Triumph).

UNDER 450 c.c.—Silver medal: 1, T. A. Mackenzie (3 A.B.C.). Bronze medal: 2, Mrs. H. G. Gale (2½ Velocette).

BEST SIDECAR PERFORMANCE.—Silver medal: 1, S. H. Brand (4 Indian Scout).

Doncaster and District M.C.C.

Closed speed trials were held recently on the Sandall Beat Road, Doncaster—the same course as will be used for the open speed event on October 1st—with results as under:

250 c.c. SOLO MACHINES.—1, A. Dodds (2½ Lewis), 42s.; 2, H. Dodds (2½ Radoel), 47s.; 3, T. Hillary (2½ Triumph), 50s.

300 c.c. SOLO MACHINES.—1, A. Dodds (2½ Lewis), 44s.; 2, E. Sayles (2½ Triumph), 46s.; 3, H. Dodds (2½ Radoel), 47s.

350 c.c. SOLO MACHINES.—1, R. S. Gray (2½ New Seal), 34s.; 2, H. Thomas (2½ Douglas), 35s.; 3, C. Wilson (2½ Douglas), 40s.

550 c.c. SOLO MACHINES.—1, J. E. Claybourn (4 Triumph), 28s.; 2, E. Keyzer (3½ Sunbeam), 29s.; 3, F. B. Leach (3½ Scott S.), 30s.

750 c.c. SOLO MACHINES.—1, J. E. Claybourn (4 Triumph), 27s.; 2, E. Keyzer (3½ Sunbeam), 28s.; 3, J. H. Wilkinson (3½ Norton), 29s.

UNLIMITED SOLO MACHINES.—1, J. E. Claybourn (4 Triumph), 28s.; 2, E. Keyzer (3½ Sunbeam), 29s.; 3, F. B. Leach (3½ Scott S.), 30s.

550 c.c. SIDECAR MACHINES.—1, H. Uppadine (4 Triumph sc.), 40s.; 2, E. Sayles (4 Triumph sc.), 44s.; 3, J. L. Brown (3½ B-Metric sc.), 45s.

750 c.c. SIDECAR MACHINES.—1, J. H. Wilkinson (4 Norton sc.), 38s.; 2, H. Uppadine (4 Triumph sc.), 46s.; 3, E. Sayles (4 Triumph sc.), 46s.

UNLIMITED SIDECAR MACHINES.—1, J. H. Wilkinson (4 Norton sc.), 37s.; 2, H. Uppadine (4 Triumph sc.), 38s.; 3, J. L. Brown (3½ B-Metric sc.), 46s.

*Fastest solo time of the day.

†Fastest sidecar time of the day.

A scene at last Saturday's rally at Stratford-on-Avon, which was organised by the manufacturers of the Easting windscreens.

Times to Light Lamps.

July 28th	9.24 p.m.
" 30th	9.21 "

" 3rd	9.14 "

The Grand Prix for Cars

To-morrow's issue of *The Autocar* is a special number containing a full report of the Grand Prix race in France. Readers of *The Motor Cycle*, who are also interested in this big event, will recognise *The Autocar* by the artistic three-colour cover.

Important Northern Hill-climb.

Next Saturday the Newcastle and District Motor Club will hold an open hill-climb at Muggleswick Common, Stanhope, Co. Durham. Some excellent sport is anticipated.

Careless Driving in Ealing.

An Ealing resident writes us drawing attention to the increase of careless and thoughtless driving through that place. As the imposition of a ten-mile limit is under consideration, it is in the interest of all to exercise greater road caution in future.

A Change of Mounts.

One of the most successful riders in the country, latterly on Royal Ruby machines, Hugh Gibson has now joined the Raleigh Cycle Co., making his *début* with the big flat twin (and sidecar) in the International Six Days Trial next week.

96 m.p.h. in Italy.

On the Monday morning, after the Circuit di Cremona, described elsewhere in this issue, Nazzaro, riding a 7.9 h.p. Indian, attempted the flying kilometre mean speed record. His best times were 23.2s. and 23.4s., an average of 23.3s., and equalling a speed of 95 m.p.h. Although not a world's record, this is certainly a marvellous performance for a road attempt.

Scottish Trials Addendum.

K. M. Quaile (8 New Imperial sc.) has now been officially accredited a silver medal winner.

Open Trial in North Wales.

No fewer than thirteen trophies adorn the prize list for the open trial to be held by the North Wales M.C.C. on the 6th prox. Entries nominally closed on the 23rd, but may be accepted at double fee until next Saturday. Mr. J. Howard Davies, 1, Ruthin Road, Denbigh, N. Wales, is secretary for the event.

Current "Chat"

Invalid Vehicles.

There are now 240 invalid vehicles licensed, bringing in a revenue of £60 to the Ministry of Transport.

Another Welsh Hill.

A reader in British East Africa writes that he knows of a hill in Wales even more difficult to climb than Screw Road.

Police Activity on the North Road.

For such offences (according to a local newspaper, sent us by a reader) as "allowing the exhaust gases to escape", a number of motor cyclists have recently been fined at the Weatherby Police Court.

87.76 Miles in an Hour!

At Brooklands on Friday last C. F. Temple, riding a 7.9 h.p. Harley-Davidson, beat the following records:

50 miles, 33m. 6.8s. = 90.59 m.p.h.
100 miles, 1hr. 8m. 22.1s. = 87.52 m.p.h.
1 hour, 87 miles, 922 yards = 87.75 m.p.h.

C. F. Temple, who broke three long distance records at Brooklands last Friday on a 7.9 h.p. Harley-Davidson.

Special Features.

THE GRAND PRIX.
AN ITALIAN T.T.
ROUND THE "SCOTTISH."

Overseas Visitor.

Mr. W. Stewart Wilson, president of the Motor Traders' Association of Wellington, New Zealand, is on a six weeks' visit to this country. Letters to the Overseas Club will reach him.

Body Design.

During this month a series of three long articles by Gordon Crosby on the harmony of outline in car bodywork has been published in *The Autocar*. Many of the arguments advanced apply equally to sidecar body design.

The Novice on the Road.

"Every time a new licence is issued, the recipient of the authority to drive should also receive a list of instructions and hints clearly setting forth the ordinary rules of the road. It may sound puerile to suggest this, but the fact remains that the majority of the accidents are caused either by indifference to or a want of knowledge of the common rules of the road."—*Express and Star*, Wolverhampton.

Metal Discs for Licences?

Writing regarding the many cases recently of faded licence cards, a reader, Mr. Ian R. MacIntyre, of Glasgow, suggests that if these were stamped on metal discs they would not become indecipherable from prolonged exposure to the elements. Additionally, licence holders might be entirely dispensed with. The idea appears to be an excellent one.

Presentations.

The T.T. winners this year came in for even more than the usual amount of lionising. At a recent T.T. dinner, given by the directors of the A.J.S. firm, H. R. Davies, the Senior winner, received a handsome dressing-case from A.J.S. agents, a shaving set from Mr. H. Taylor, a gold cigarette-case from Mr. Osborne (of Druid forks fame), and a silver rose-bowl from Mr. P. J. Evans.

Eric Williams, the Junior winner, received an alabaster clock and ornaments from A.J.S. agents, a silver cigarette-case from Mr. H. Taylor, and a gold cigarette-case from Mr. Osborne. Mr. Alec Ross presented a cheque for twenty guineas, to be divided among the A.J.S. riders who did not win.

The ITALIAN "T. T."

All Records Broken in the Circuit di Cremona. British Successes.

The start of the Circuit di Cremona. British, French, American, Swiss, and Italian machines lined up preparatory to the most important Italian event of the year.

THE most successful and important motor cycle race ever held in Italy took place on the 10th inst., this being the Circuit di Cremona, a road race of 160 miles, run off on a flat, triangular course of approximately forty miles. One hundred entries, representing the products of five countries—England, France, Italy, Switzerland, and America—and Swiss riders besides the Italians, gave an international character to the event.

English machines were most numerous, there being Douglas, Wooler, Verus, Calthorpe, and Excelsior machines in the 350 c.c.; Sunbeam, Ariel, Norton, and Douglas in the 500 c.c.; and Hazlewood and Douglas in the 750 c.c. classes; whilst the 1,000 c.c. class was a duel between the two strong teams of Harley-Davidsons and Indians, representing America.

Italy's Most Famous Rider.

Great interest attached to the re-appearance of Italy's most famous rider, Carlo Maffei. It was, therefore, expected that long-standing records would be beaten, especially the one for the fastest lap, which, established in 1914 by MacDonagh on a Rudge, in 39m. 19s., had never been beaten, even by the 1,000 c.c. machines.

This prophecy was soon realised, because, a few minutes after all the riders had started, Maffei (3½ Bianchi), who started twentieth, arrived at a tremendous speed, having passed all the other competitors who had left before him. In a few seconds his time (37m. 15s.) went up on the board, and was greeted with great enthusiasm by the public in the stands. The long-standing record had been beaten by 2m. 4s. at a speed of 63.3 m.p.h. This was the fastest lap of the day for this class, but more surprises were in store, for, in the second lap, Winkler (on a 7-9 Harley-Davidson)

created another record by covering the lap in 31m. 25s. at a speed of 75 m.p.h.—a speed never before attained during an Italian road race.

The whole race was sternly contested from start to finish, riders changing positions at almost every lap. The final results were as follows:

1,000 c.c. CLASS.

	h. m. s.	Ave. speed.
1. Winkler (7-9 Harley-D.)	2 17 17	68.64 m.p.h.
2. Maffei (7-9 Harley-D.)	2 20 50	
3. Malvisi (7-9 Harley-D.)	2 21 49	

Fastest lap: Winkler, 31m. 25s. (speed = 75 m.p.h.).

Eighteen riders started in this class, and thirteen finished.

750 c.c. CLASS.

	h. m. s.	Ave. speed.
1. Rava (4 Indian) ..	2 46 10½	56.7 m.p.h.
2. Tanzi (5 Motoasacco) ..	2 57 8½	
3. Piacadori (5 Frera) ..	3 8 25½	

Fifteen started, and six finished. Fastest lap: Rava, 39m. 44½s. (speed = 59.3 m.p.h.).

500 c.c. CLASS.

	h. m. s.	Ave. speed.
1. Vailati (3½ Sunbeam) ..	2 42 11	58 m.p.h.
2. Bassini (3½ Norton) ..	2 42 39	
3. Maggi (3 A.B.C.)	2 50 26	
4. C. Maffei (3½ Bianchi)	2 54 29	

Fastest lap: Maffei, 37m. 15s. (speed = 63.6 m.p.h.). Both fastest lap and whole distance times bettered the 750 c.c. class. Forty-two started, and twenty-one finished.

A characteristic Italian street scene, showing Vailati (3½ Sunbeam) rounding a bend during the Circuit di Cremona.

The Italian T.T.—

350 c.c. CLASS.

		h.	m.	s.	Ave. speed.
1. Francoi (2½ Motosacoche)		3	10	6	50 m.p.h.
2. Gambini (2½ Douglas)		3	18	12	
3. Garanzini (2½ Verus)		3	22	11½	

Fastest lap: Francoi, 44m. 19s. (speed = 53 m.p.h.).

Despite the large number of competitors and the dust on the roads owing to the dry weather, no serious accidents happened.

The Italian Championship.

This race was the seventh for the Italian championship, a much-coveted

honour, which is now decided on points over twelve events, instead of a single race as previously. All these events, being officially supported by the Italian Union of Motor Cycle Manufacturers and Traders, are naturally very keenly contested and followed with great interest by the press and public.

Franconi (2½ Motosacoche), winner of the 350 c.c. class

Vailati (3½ Sunbeam), who won the 500 c.c. class.

Rava (4 Indian), victor in the 750 cc. class.

Winkler (7-9 Harley-Davidson), winner of the 1,000 c.c. class.

THE INTERNATIONAL SIX DAYS TRIAL.

AS the Swiss team last year won the manufacturers' trophy in the International trials, this year the trial will be held in Switzerland from August 1st to 6th, starting from Geneva. The following entries (thirty-three solo and eleven sidecars) have been received:

MOTOR BICYCLES.

1. Morand (Condor).
2. Willemin (Condor).
3. Clerc (Condor).
4. Eric Williams (A.J.S.).
5. Bally (Hobart).
6. A. Denoot (New Imperial).
7. Magnin (New Imperial).
8. Jean Wolteuengel (Condor).
9. Three Viratelles (drivers not specified).
10. Dawson (E. and M.).
11. Guigniet (Motosacoche).
12. J. G. Neher (Motosacoche).
13. Pictet (Norton).
14. Staub (Norton).
15. Tschudy (Norton).
16. F. P. Dickson (Brough).
17. E. H. Lees (Sunbeam).
18. Egger (Triumph).
19. Cossetto (Douglas).
20. Huzli (Douglas).
21. Schlee (Douglas).
22. Gafner (Indian).
23. Wiedmer (Indian).
24. Nussle (Moto-Réve).
25. Alfieri (Scott).
26. — (Scott).
27. — (Scott).
28. Leslie Guy (Scott).
29. Haseler (Triumph).
30. Zysset (Triumph).
31. Bolthausen (Triumph).
32. Bersetti (Motosacoche).
33. Rothenbach (Motosacoche).

SIDECARS.

34. H. Dinkel (Condor).
35. Henry (Indian).
36. Moelius (Indian).
37. Verlet (Janoir).
38. Chappaz (Janoir).
39. Penet (Janoir).
40. Hugh Gibson (Raleigh sc.).
41. Gex (Motosacoche).
42. Bonvia (Motosacoche).
43. Rolland (Motosacoche).
44. H. R. Davies (6 A.J.S. sc.).

S.E. CENTRE (A.C.U.) SPEED TRIALS AT BROOKLANDS.

NO fewer than 400 entries were received for the South-Eastern Centre A.C.U. speed trials held at Brooklands on Saturday last.

The Surbiton and District Club, who, incidentally won the team race, were responsible for its promotion, and may be congratulated on its success.

Time results printed below show that speeds over the kilometre were particularly good for a club meeting. Results:

CLASS 1 (Touring machines not exceeding 250 c.c.)—Standing start: 1. S. M. Greening (2½ Francis-Barnett-Jap), 47½.

CLASS 2 (Touring machines not exceeding 350 c.c.)—Standing start: 1. J. Vivian Prestwich (2 Massey-Arran-Jap), 49s.

CLASS 3 (Touring machines not exceeding 500 c.c.)—Standing start: 1. G. A. Vandervell (3½ Norton), 40s.

CLASS 4 (Touring machines not exceeding 750 c.c.)—Standing start: 1. G. A. Vandervell (3½ Norton), 38½.

CLASS 5 (Touring machines, unlimited)—Standing start: 1. G. A. Vandervell (3½ Norton), 38½.

CLASS 6 (Touring sidecar machines not exceeding 600 c.c.)—Standing start: 1. H. H. Beach (3½ Norton sc.), 48s.

CLASS 7 (Touring sidecar machines not exceeding 750 c.c.)—Standing start: 1. H. H. Beach (3½ Norton sc.), 47½.

CLASS 8 (Touring sidecar machines, unlimited)—Standing start: 1. B. S. Allen (3½ Norton sc.), walk over.

CLASS 9 (Sidecar machines not exceeding 600 c.c.)—Standing start: 1. D. R. O'Donovan (3½ Norton sc.), 47½.

CLASS 10 (Sidecar machines not exceeding 750 c.c.)—Standing start: 1. D. R. O'Donovan (3½ Norton sc.), 47½.

CLASS 11 (sidecar machines, unlimited)—Standing start: 1. W. D. Marchant (8 Zenith), 40½.

CLASS 12 (Solo machines not exceeding 250 c.c.)—Standing start: 1. H. A. Reyre (2½ Reyre-Newson), 44½.

CLASS 13 (Solo machines not exceeding 350 c.c.)—Standing start: 1. Kaye Don (2½ Massey-Arran), 41½.

CLASS 14 (Solo machines not exceeding 500 c.c.)—Standing start: 1. G. A. Vandervell (3½ Norton), 38½.

CLASS 15 (Solo machines not exceeding 750 c.c.)—Standing start: 1. G. A. Vandervell (3½ Norton), 38½.

CLASS 16 (Solo machines, unlimited)—Standing start: 1. G. A. Vandervell (3½ Norton), 38½.

CLASS 17 (Touring machines not exceeding 250 c.c.)—Flying start: 1. J. Vivian Prestwich (2 Massey-Arran-Jap), 43½.

CLASS 18 (Touring machines not exceeding 350 c.c.)—Flying start: 1. A. A. Prestwich (2½ Dot-Jap) and H. F. Edwards (2½ Coulson), 40s.

CLASS 19 (Touring machines not exceeding 500 c.c.)—Flying start: 1. G. A. Vandervell (3½ Norton), 31½.

CLASS 21 (Touring machines, unlimited)—Flying start: 1. G. Packmao (8 Sunbeam-Jap), 30s.

CLASS 22 (Touring sidecar machines not exceeding 600 c.c.)—Flying start: 1. H. H. Beach (3½ Norton sc.), 36½.

CLASS 24 (Touring sidecar machines, unlimited)—Flying start: 1. E. A. Bridgman (7 Indian sc.), 41½.

CLASS 25 (Sidecar machines not exceeding 600 c.c.)—Flying start: 1. D. R. O'Donovan (3½ Norton sc.), 37s.

CLASS 26 (Sidecar machines not exceeding 750 c.c.)—Flying start: 1. D. R. O'Donovan (3½ Norton sc.), 37s.

CLASS 27 (Sidecar machines, unlimited)—Flying start: 1. W. D. Marchant (8 Zenith sc.), 33s.

CLASS 28 (Solo machines not exceeding 250 c.c.)—Flying start: 1. W. Julian (2½ Lewis), 32½.

CLASS 29 (Solo machines not exceeding 380 c.c.)—Flying start: 1. Kaye Don (2½ Massey-Arran), 33s.

CLASS 30 (Solo machines not exceeding 500 c.c.)—Flying start: 1. G. A. Vandervell (3½ Norton), 30½.

CLASS 31 (Solo machines not exceeding 750 c.c.)—Flying start: 1. C. G. Pullin (3½ Douglas), 31½.

CLASS 32 (Solo machines, unlimited)—Flying start: 1. F. C. Townshend (8 Zenith), 29½.

CLASS 57 (Ladies' class, sports cycle cars up to 1,500 c.c.)—Standing start: 1. Miss D. Addison (10½ Douglas), 49½.

CLASS 58 (Ladies' class, sports cycle cars up to 1,500 c.c.)—Flying start: 1. Miss D. Addison (10½ Douglas), 40½.

CLASS 59 (Three-wheeled touring cycle cars up to 1,100 c.c.)—Standing start: 1. E. B. Ware (8 Morgan-Jap), 60½ (walk over).

CLASS 60 (Three-wheeled touring cycle cars up to 1,100 c.c.)—Flying start: E. B. Ware (8 Morgan-Jap), 56½ (walk over).

CLASS 61 (Three-wheeled racing cycle cars up to 1,100 c.c.)—Standing start: E. B. Ware, walk over.

CLASS 62—Ditto.

TEAM RACE.—1. Surbiton and District M.C.C.; 2. Brighton and Hove M.C.C.; 3. Ealing and District M.C.C.

MOTOR CYCLE WINNERS' HANDICAP.—Standing start: 1. Kaye Don (2½ Massey-Arran), 19s.

FASTEST CAR v. FASTEST MOTOR BICYCLE.—1. A. F. Nash (8.7 G.N.) wins 1½s. ahead of G. A. Vandervell (3½ Norton).

A KILOMETRE IN 24³/₅ secs.

North Country Norton Rider makes a Game Second to G. Dance on the Sunbeam, in East Midland Centre Speed Trials.

OUTSTANDING impressions given by the East Midland Centre (A.C.U.) speed trials in Clipstone Park, near Mansfield, on Saturday, were that such events tend to become unwieldy, and that there appear to be few really top notch speedmen.

In a seemingly interminable succession of contestants, running from 1.40 in the afternoon until 9.30 in the evening, George Dance, with his 2³/₄ h.p. and 3¹/₂ h.p. Sunbeam, was unquestionably the premier rider of the day. His supremacy was never seriously challenged, but R. T. Cawthorne, a Yorkshire rider of a 3¹/₂ h.p. Norton, struggled hard to equal Dance's performances. Cawthorne did not even make the second fastest time of the day; but his consistent attempts merit special comment. H. R. Davies (2³/₄ A.J.S.) seemed just short of the necessary "last ounce"; but it appears doubtful if the peculiar riding position he adopted in the passenger classes had any serious justification.

In the matter of riding attitude, Dance is worthy of study. He sits his machine to perfection, and, incidentally, his manner of returning down the course is exemplary. Mary Jennison (2¹/₄ Velocette), T. C. Greenwood (4 Sunbeam), and R. Flint (3 A.B.C.) made good times; the first mentioned rode her machine with great skill and judgment. The remainder of the entrants, who comprised the 550 and upwards, who ran during the proceedings, were chiefly local riders whose performances, while no doubt excellent in club events, served to show by contrast how really fast the experts were; this is specially true of the high-powered twins, which, with a single exception—R. Stacey (7-9 Harley-Davidson)—were quite outclassed by the smaller singles.

First and second places are given below in the classes which were run off before darkness came on and ended the meeting. A slightly falling gradient and a following wind assisted the riders to some extent.

Sidcar Classes (Standing Start).

CLASS 1 (under 500 c.c.)—General: 1. L. Padley (3¹/₂ Norton sc.), 41s.; 2. E. Searle (3¹/₂ Sunbeam sc.), 44s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 37s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 40s.

CLASS 2 (under 550 c.c.)—General: 1. J. Haslam (3¹/₂ Douglas sc.), 43s.; 2. L. Padley (3¹/₂ Norton sc.), 46s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 37s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 41s.

CLASS 3 (under 750 c.c.)—General: 1. T. C. Greenwood (4 Sunbeam sc.), 40s.; 2. C. Bullough (3¹/₂ Norton sc.), 46s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 36s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 40s.

CLASS 4 (Unlimited).—General: 1. T. C. Greenwood (4 Sunbeam sc.), 39s.; 2. P. Barron (7-9 Indian sc.), 41s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 37s.; 2. H. R. Davies (2³/₄ A.J.S. sc.), 42s.

Sidcar Classes (Flying Start).

CLASS 5 (under 500 c.c.)—General: 1. J. Haslam (3¹/₂ Douglas sc.), 34s.; 2. E. Searle (3¹/₂ Sunbeam sc.), 35s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 28s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 31s.

CLASS 6 (under 550 c.c.)—General: 1. L. Padley (3¹/₂ Norton sc.), 34s.; 2. J. Haslam (3¹/₂ Douglas sc.), 35s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 29s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 32s.

CLASS 7 (under 750 c.c.)—General: 1. L. Padley (3¹/₂ Norton sc.), 35s.; 2. C. Bullough (3¹/₂ Norton sc.), 35s. Expert: 1. G. Dance (3¹/₂ Sun-

At the starting line in Clipstone Park. G. Dance (3¹/₂ Sunbeam sidecar), who was first in every class in which he ran. On the same machine solo his best speed exceeded 91 m.p.h. over the flying kilometre.

beam sc.), 29s.; 2. H. R. Davies (2³/₄ A.J.S. sc.) and G. Stobart (5-6 James sc.) tied, 35s.
CLASS 8 (Unlimited).—General: 1. T. C. Greenwood (4 Sunbeam sc.), 31s.; 2. R. Stacey (7-9 Harley-Davidson sc.), 32s. Expert: 1. G. Dance (3¹/₂ Sunbeam sc.), 29s.; 2. R. T. Cawthorne (3¹/₂ Norton sc.), 32s.

Solo Classes (Standing Start).

CLASS 9 (Two-strokes under 350 c.c.)—General: 1. J. R. Sylvester (2¹/₄ Velocette), 46s.; 2. F. Wilkinson (2¹/₄ Cedros), 54s. Expert: 1. R. E. Pugh (2¹/₄ Lewis), 42s.; 2. Mary Jennison (2¹/₄ Velocette), 45s.

CLASS 10 (Two-strokes, unlimited).—General: 1. J. R. Sylvester (2¹/₄ Velocette), 46s.; 2. F. Wilkinson (2¹/₄ Cedros), 54s. Expert: 1. G. Mills (3¹/₂ Scott), 41s.; 2. R. E. Pugh (2¹/₄ Lewis), 45s.
CLASS 11 (under 275 c.c.)—General: 1. J. N. Roberts (2¹/₄ New Imperial), 43s.; 2. N. Black (2¹/₄ Omega), 44s. Expert: 1. B. Kershaw (2¹/₄ New Imperial), 39s.; 2. R. E. Pugh (2¹/₄ Lewis), 42s.

CLASS 12 (under 350 c.c.)—General: 1. R. Lucas (2¹/₄ Coulson B), 41s.; 2. J. N. Roberts (2¹/₄ New Imperial), 42s. Expert: 1. G. Dance (2¹/₄ Sunbeam), 34s.; 2. B. Kershaw (2¹/₄ New Imperial), 42s.

CLASS 13 (under 500 c.c.)—General: 1. R. G. Flint (3 A.B.C.), 35s.; 2. F. Hatton (3¹/₂ Douglas), 37s. Expert: 1. G. Dance (3¹/₂ Sunbeam), 32s.; 2. T. Simister (3¹/₂ Norton), 35s.

CLASS 14 (under 550 c.c.)—General: 1. R. Flint (3 A.B.C.), 36s.; 2. F. Stevenson (3¹/₂ Brough), 37s. Expert: 1. G. Dance (3¹/₂ Sunbeam), 32s.; 2. R. T. Cawthorne (3¹/₂ Norton), 36s.

CLASS 15 (under 750 c.c.)—General: 1. T. C. Greenwood (4 Sunbeam), 34s.; 2. R. Flint (3 A.B.C.), 35s. Expert: 1. G. Dance (3¹/₂ Sunbeam), 32s.; 2. R. T. Cawthorne (3¹/₂ Norton), 35s.

CLASS 16 (Unlimited).—General: 1. T. C. Greenwood (4 Sunbeam), 34s.; 2. R. Carter (7-9 Indian), 36s. Expert: 1. G. Dance (3¹/₂ Sunbeam), 31s.; 2. H. R. Davies (2³/₄ A.J.S.) and H. Petty (3¹/₂ Norton) tied, 36s.

Solo Classes (Flying Start).

CLASS 17 (Two-strokes under 350 c.c.)—General: 1. J. Sylvester (2¹/₄ Velocette), 36s.; 2. S. Clarke (2¹/₄ Lewis), 44s. Expert: 1. Mary Jennison (2¹/₄ Velocette), 35s.; 2. R. E. Pugh (2¹/₄ Lewis), 36s.

CLASS 18 (Two-strokes, unlimited).—General: 1. G. Mills (3¹/₂ Scott), 32s.; 2. J. Sylvester (2¹/₄ Velocette), 37s. Expert: 1. Mary Jennison (2¹/₄ Lewis), 35s.; 2. R. E. Pugh (2¹/₄ Lewis), 40s.

CLASS 19 (under 275 c.c.)—General: 1. J. N. Roberts (2¹/₄ New Imperial), 34s.; 2. N. Black (2¹/₄ Omega), 35s. Expert: 1. J. N. Roberts (2¹/₄ New Imperial), 34s.; 2. Mary Jennison (2¹/₄ Velocette), 35s.

CLASS 20 (under 350 c.c.)—General: 1. R. Lucas (2¹/₄ Coulson B), 30s.; 2. N. E. Jones (2¹/₄ Blackburne), 32s. Expert: 1. G. Dance (Sunbeam), 26s.; 2. H. R. Davies (2³/₄ A.J.S.), 28s.

CLASS 21 (under 500 c.c.)—General: 1. R. Flint (3 A.B.C.), 28s.; 2. H. N. Barron (3¹/₂ Norton), 30s. Expert: 1. G. Dance (3¹/₂ Sunbeam), 24s.; 2. R. Cawthorne (3¹/₂ Norton), 27s. *Fastest time of day (90.94 m.p.h.).

CLASS 22 (under 550 c.c.)—Cancelled.
CLASS 23 (under 750 c.c.)—Cancelled.
CLASS 24 (Unlimited).—General: 1. R. Stacey (7-9 Harley-Davidson), 25s.; 2. T. C. Greenwood (4 Sunbeam), 26s. Expert: 1. R. Cawthorne (3¹/₂ Norton), 27s.; 2. H. Petty (3¹/₂ Norton) and T. Simister (3¹/₂ Norton) tied, 28s.

THE OVERSEAS MOTOR TRADE CONFERENCE.

THE universal preference for British-made machines, which, by their high quality, finish, and general design, prove more suitable for overseas conditions, was the ruling theme of the First Overseas Motor Trade Conference, held on Thursday last at the Hotel Cecil.

This innovation, which was heartily appreciated by both the British manufacturers and the overseas delegates, was convened by our contemporary *The Motor Export Trader*, for the purpose of establishing greater co-operation between the Home and Overseas markets.

In his speech on behalf of the Department of Overseas Trade, Sir Philip Lloyd-Greame, K.B.E., emphasised the great importance of bringing the manufacturers of home products in close touch with the representatives of the foreign markets, and wished to congratulate the conveners of the conference.

From 1913 to 1920 the importation of motor vehicles had exceeded the export figures, and that position must be reversed. To do this, he pointed out, it was essential to study closely the requirements of this particular market, and not, as hitherto, be satisfied with the identical machine as sold in this country. Some interesting figures were quoted, which showed that to each British vehicle registered there were also licensed thirty foreign machinees.

Major H. R. Watling, whilst limiting his views to those pertaining to motor cycles, was convinced that we have closely studied the requirements of the overseas buyer.

French Classic Race over the Circuit de la Sarthe results in Win for Great Britain.
Record Lap at 62.48 m.p.h.

FIFTY-TWO motor cyclists competed in the Grand Prix race, organised by the Union Motorcycliste de France on Sunday last. The circuit de la Sarthe, over which the race was contested, measures $10\frac{1}{2}$ miles, the 500 c.c. and the 350 c.c. riders being called upon to cover eighteen circuits ($193\frac{1}{2}$ miles), and the 250 c.c. lightweight riders fifteen laps ($161\frac{1}{4}$ miles). Le Mans attracted thousands of visitors for the motor cycle race and the car race on Monday. Although the course had been excellently treated, it was, perhaps, natural that the 100 m.p.h. cars had cut up the surface badly in practice, patches of sharp flints being encountered at intervals. Except for half-a-dozen or so difficult turnings, the course is extremely fast, with its long straight stretches, higher gears being possible than on the Manx T.T. circuit.

A striking success was scored by British riders and machines, representatives of the home country occupying the first five places in the chief class for 500 c.c. machines, France claiming honours in the 350 c.c. event, and a French rider mounted on a machine assembled from British components winning the 250 c.c. category.

The race opened in dull weather, a southerly breeze tempering the atmosphere. Interest in the race was strikingly evident. The decision to start all the 500 c.c. competitors in a bunch, the 350 c.c. men a minute or so later, and the 250 c.c. class next will no doubt cause consternation in Britain, particularly as the difficult bend came in three kilometres. But the practice has much to recommend it. Actually it worked splendidly, for at the fall of the flag all the riders shot away, and a most impressive spectacle was the result, for all but one rider got their engines going immediately. There was a hubbub among the crowd as the men jockeyed for positions, No. 7, Naas (A.B.C.), forging ahead of the rest; the unfortunate one

THE LE MANS CIRCUIT.

The Grand Prix course, each lap of which is $10\frac{1}{2}$ miles. The 500 c.c. and 350 c.c. classes covered the course eighteen times—a total distance of $193\frac{1}{2}$ miles. The 250 c.c. class went round fifteen times: $161\frac{1}{4}$ miles.

left behind was Borgoli (Griffon). There were but eight in the 350 c.c. class, as against the twenty-eight senior starters.

Another interval, at the very fine total of thirteen 250 c.c. lightweight riders

got under way, Milner (Levis) making a sluggish start. But two or three minutes elapsed before a procession of riders was seen proceeding at speed nearly a mile distant. Twos, threes, then a long string, followed by other bunches sufficed to work up enthusiasm thus early.

The first man past the grandstands was Bennett (Sunbeam), followed at 100 yards interval by Edmond (Triumph) and de la Hay (Sunbeam). A further interval, and Naas (A.B.C.), Finzi (A.B.C.), and Jolly (Alcyon) passed at a good pace. The advantage of a scratch start for all riders was now appreciated, for there was no subtracting of time or doubt as to the correct order. Walker (Norton) was the first to pull in at the depots for some adjustment.

Of the 350 c.c. riders, Meunier (Alcyon) led on the first lap, Gambini (Douglas) being second, and Isodi (Douglas) third, whilst among the 250 c.c. riders, Milner (Levis), notwithstanding the seconds he lost at the start, had forged ahead of his *confrères* and led past the stand, closely pressed by Bauer (Yvels) and Vernisse (Yvels-Jap).

From the beginning, it was evident that there was to be no flagging of interest, for the riders in one or other of the classes were almost continually in sight, the leaders of the 500 c.c. class by the end of two laps being on the tails of the miniatures.

First Lap Order Maintained.

Bennett (Sunbeam), Edmond (Triumph), and de la Hay (Sunbeam) had maintained their order at the end of two laps, and, indeed, Bennett was virtually acting as pacemaker, for less than forty yards separated the trio. Bennett's time for two laps—20m. 57s.—equals a speed of 61.54 m.p.h. Others maintained their positions, except Hassall (Norton), who, though speedy at the

Contour of the Grand Prix course, which reveals the totally different conditions from those prevailing on the T.T. course in the Isle of Man.

Partez! It would be difficult to imagine a more animated scene than the simultaneous start of 28 machines in the 500 c.c. class.

stands, had evidently stopped, for he was last. Le Vack (Indian), of whom much was expected, despite a damaged leg sustained in practice, was well up.

First Lap Order and Times.

500 C.C. CLASS.

	Time.
1. A. Bennett (Sunbeam) ..	20m. 57s.
2. F. G. Edmond (Triumph) ..	20m. 58s.
3. T. C. de la Hay (Sunbeam) ..	21m. 1s.
4. Naas (A.B.C.) ..	21m. 21s.
5. F. W. Dixon (Douglas) ..	21m. 30s.
6. Jolly, sen. (Alcyon) ..	21m. 34s.
7. H. Le Vack (Indian) ..	21m. 38s.
8. Kinzi (A.B.C.) ..	21m. 37s.
9. A. H. Alexander (Douglas) ..	22m. 16s.
10. Pinney (Triumph) ..	22m. 42s.
11. Borgotti (Griffon) ..	22m. 43s.
12. J. L. Emerson (Douglas) ..	23m. 1s.
13. Vuillamy (Griffon) ..	23m. 8s.
14. Sgonina (Triumph) ..	23m. 9s.
15. Desvaux (Alcyon) ..	23m. 28s.
16. Gillard (Peugeot) ..	23m. 49s.
17. Bartlett (A.B.C.) ..	24m. 7s.

7. Cottin (Moto-Solo) ..	29m. 34s.
8. Coudert (Griffon) ..	29m. 38s.
9. Nel (Velocette) ..	29m. 40s.
10. Denley (Velocette) ..	30m. 46s.
11. Runtun (Velocette) ..	31m. 3s.
12. Colombel (Griffon) ..	33m. 10s.

Gaps now began to appear, but were not nearly so pronounced as in the T.T., for, with machines of such varying speeds, the riders were bound to be scattered over the short circuit, and frequent passing occurred. News arrived that Maffei, the Italian champion, riding a Bianchi, fell at the acute bend at Pont-lieu, buckling his front wheel and hurting himself rather badly.

The leaders on the third lap now appeared in sight, and it was observed that de la Hay (Sunbeam) now led the procession, another Sunbeam rider, A. Bennett, was second, and Edmond (Triumph) third, though he had lost but 200 yards or so. Vuillamy (Griffon) stopped twice at his depot in the first three laps, experiencing difficulty in restarting.

A short interval, and once again six machines appeared in sight on the red ribbon of road in the distance, Emerson (Douglas) passing one or two. The two Ricardo-engined Triumphs could always be detected by their clean, soft note, and they, too, were running very consistently. From the stand, the speeds were not impressive, due, no doubt, to the very wide course.

Speeds on the Fast Stretches.

The 500 c.c. leaders were averaging about 10m. per lap, so that, approximately, they passed the stands at 70 m.p.h.

Bennett again changed places with de la Hay for leadership after four laps, Edmond still lying third, two or three

hundred yards away. After five laps Bennett and de la Hay (Sunbeams), having thoroughly grasped the position, shot by almost abreast, though neither apparently was coaxing his machine to the full.

O. Feeny (Verus-Jap) stopped at his depot for adjustments, but was soon off again. A French machine going well was a side-by-side twin-cylinder Peugeot ridden by Gillard. Stops at this stage were infrequent. For instance, twelve of the thirteen 250 c.c. riders had completed four laps, likewise six of the seven 350 c.c. men. The missing 250 c.c. man, Cottin (Moto-Solo), fell without hurting himself at Hunandières and retired.

De la Hay and Bennett on Sunbeams were now due on their seventh lap, and

Bennett, on the right, and de la Hay (first and second, on $3\frac{1}{2}$ Sunbeams) exchange mutual congratulations after the race.

The Grand Prix.—

pulled in side by side for replenishments; but Edmond (side-by-side Triumph), ever on their heels, elected to continue, and so led the throng. The Sunbeam men were away again in double quick time. Le Vack (Indian) also halted a few seconds to replenish his tank. The telephone announced that Dard (Thomann) was in difficulties near Mulsanne corner. Later he came into the depot to retire. Six laps were evidently sufficient to cause anxiety about petrol, for Alexander (Douglas) stopped, and then Walker (Norton) walked in, pushing his machine, with a cigarette in his mouth, evidently having retired. Meanwhile, J. Meunier (Alcyon) was leading the 350 c.c. group, and Milner, going strong on his Levis, had established a two minute lead among the babies. Milner, ever dogged with ill-luck in racing events, had broken the platform

of his magneto clean off during practice, and had arranged a clever makeshift repair by fixing another platform for the magneto behind the cylinder. Clearly, it was serving splendidly. Mud on the riders, considering the heat and sun, caused some surprise, and it appears that the calcium chloride used to prevent dust was so thick in parts as to resemble porridge.

Edmond (Triumph) was round first after seven laps, and, after he had gone, one saw a pair of riders at full speed in the distance. As expected, they were 2 and 16 (de la Hay and Bennett), riding wonderfully and ready to take up the leadership, when Edmond found it necessary to stop for petrol. But they had nearly a mile to make up. In another minute, Le Vack (Indian) came along, followed by Sgonina (o.h.v. Triumph). Horsman (Norton) was hot on their trail, but Alexander (Douglas) stopped for

petrol, also Denley (Velocette) and Dupont (Griffon). Delabre (Rover with Philipson pulley) was going well, always conspicuous in his primrose "wooly." Colombel's two-stroke Griffon was making an excellent impression. Agnero (A.B.C.) toured in on one cylinder and stopped at his depot, Perrin on another A.B.C. going great guns, though he was about to be lapped by the leading men.

British Supremacy.

Again Edmond led, this time with Bennett (a mile behind), having left de la Hay a hundred yards or so. It was remarkable that the same three had led throughout, an excellent example of British supremacy, which was not lost upon the spectators. In close company, F. W. Dixon (Douglas) and Sgonina (Triumph) dashed up, the latter halting to replenish his tank. He was quickly away again.

(Left) Naas (A.B.C.), first away at the start from the big bunch of 500 c.c. riders; he had subsequently tyre trouble.
(Right top) Riding position of British and French riders compared; short v. long wheelbase.
(Bottom) Bennett and de la Hay, first and second, rode abreast for many laps.

The Grand Prix.—

When Meunier (350 c.c. Alcyon) passed, still leader of his class, with eight laps, Edmond (500 c.c. Triumph) was hot on his heels, leading the whole van after ten laps accomplished non-stop. The inevitable Sunbeams were as usual but a mile behind with tanks almost full. Harveyson (350 c.c. Douglas) rode in slowly, his back tyre flat, and reported an accident to Kickham. Walker (Norton) was now creeping up. A.B.C. hopes began to vanish when Verpault (A.B.C.) toured in on a flat back tyre. There was a thrill when Le Vack (Indian), doing nearly eighty miles an hour, passed Sgonina (Triumph) in front of the stands. In a minute or two Milner came along still leading on his game little Levis—French official Lewis! Pinney on his silent running o.h.v. Triumph followed, at a faster speed, of course. Vernisse (Yvel's) seemed to be misfiring, but was going excellently.

After Twelve Laps.

At the end of twelve laps, de la Hay led by quite a mile, so that he no doubt knew the fate of Edmond, of whom news had not reached the stand. Second in order was Bennett (Sunbeam). Pean (Peugeot) was in close company, though a complete lap in arrears. Walker (Norton), occasionally misfiring, now passed, followed by a trio composed of Dixon (Douglas), Perrin (A.B.C.), and Sgonina (Triumph)—who had crept up to third place.

After thirteen laps, with almost monotonous regularity, de la Hay came along and in less than 30s. Bennett on the other Sunbeam—thus, barring ill-luck, with but

A characteristic snap of C. Sgonina, who piloted a 3½ o.h.v. Triumph into third place. His total time was 3 hrs. 24 min. 58½ secs.—56.96 m.p.h.

five laps to go, a victory appeared to be a certainty for England, but the Sunbeam-Triumph duel was clearly at an end, as Edmond did not observe the signals for him to stop for petrol.

Le Vack (Indian), much overdue, now toured in, and proceeded leisurely to remove his gloves, which suggested abandonment; it transpired that an exhaust roller had broken. Sgonina's prospects thereby brightened considerably, for he flew past, going better than ever. The regrettable news was now posted that E. Kickham (Douglas) had fallen, breaking his leg at the turning to Arnage.

Still leading, de la Hay dashed in to replenish after fourteen laps, his usually inseparable companion, Bennett, continuing, and thus taking up the lead once again. One of the French experts, Pean (Peugeot) was still lapping consistently, though noticeably more slowly than the leading Britishers. Milland (350 c.c. Douglas) followed, with Perrin (A.B.C.) hard on his heels. Emerson (500 c.c. Douglas) halted for petrol.

Leadership Unchanged.

Bennett was round first again, and 1m. 35s. later de la Hay (Sunbeam) came along. Some idea of the weeding out process now proceeding may be gained from the fact that of the fifty-two starters forty-six completed two laps, forty-one covered four laps, thirty-six six laps, and thirty-two eight laps. Delabre (Rover), going much better, completed a fast lap, also Milland and Thorpe (Douglases).

The leader of the 350 c.c. section, Meunier (Alcyon) halted after thirteen laps for replenishments. In five seconds Bennett (Sunbeam), still ahead of the field, came along, followed by Marc (Alcyon).

Edmond (Triumph) now toured into his depot with another competitor sitting on his carrier. The hope of the Triumph entry was thus dashed through nothing more serious than running short of petrol.

Horsman (Norton) arrived on a flat back tyre and retired, completing the Norton cup of bitterness, for their team's chances generally had been jeopardised by tyre troubles. In this connection the numerous sharp flints on the course proved a great trouble to the riders. A record lap by Bennett increased his lead over de la Hay (Sunbeam), and there was great enthusiasm and cheering when an official announced that Bennett had beaten the record, averaging over 62 m.p.h. French chances rested with the Alcyon, A.B.C., and Peugeot riders. Their machines were noticeably of much lighter construction than the British mounts, and their short wheelbases did not enable their riders to lie down along the top tube in the businesslike way that Britishers adopt.

With the end near, Bennett (Sunbeam), and a mile or so behind de la Hay on a duplicate mount, formed the vanguard once again, with their engines as fresh as ever. Officials announced that they were on their last lap, and two others stepped forth with huge red and yellow flags to signal them to stop.

Amidst a yell of cheering, Alec Bennett dashed over the finishing line on his

Vernisse, who won the 250 c.c. class on a 2½ h.p. Yvels-Jap, a machine closely following British lines, and constructed from British units.

Winner of the 350 c.c. class—Meunier, on an overhead valve twin Alcyon.

J. L. Emerson (3½ Douglas) overtaking a French competitor at Le Maison Neuve. Emerson finished fifth.

3½ h.p. Sunbeam, scoring a magnificent British victory. Of course, he received the inevitable embraces, and was immediately surrounded by an army of photographers and cinema operators.

Sgonina (Triumph) meanwhile passed on his last lap, and in three minutes or so, T. C. de la Hay (Sunbeam) finished amidst cheering to occupy second place. Both Sunbeam men enjoyed no trouble runs, though Bennett fell once in passing a French rider on a corner. Still another rider of a British machine occupied third place—Sgonina (on a Triumph with Ricardo four-valve engine), who is a Welshman, not Italian as many supposed. The remarkably consistent running of the Sunbeams, which we have indicated in this narrative, is emphasised by the fastest lap times, for de la Hay on the second and third laps clocked 10m. 21s., A. Bennett recording precisely the same time on the fifteenth lap, average speed 62.48 m.p.h.

Of the 350 c.c. riders, Meunier (Alcyon), who rode excellently and, indeed led throughout, was 32m. 1s. slower than Bennett after the fourteenth lap.

Albert Milner (250 c.c. Levis) stopped on the twelfth lap with a flint clean through the back tyre. A gaitered repair would not pass the chain stays, and so he had to withdraw. Jolly (250 c.c. Alcyon) now assumed the lead in this class, having an 8m. advantage over the next man—Vernisse (Yvel's). Meanwhile Dixon (3½ Douglas) arrived home in fourth position, 24m. behind Bennett, whilst Emerson finished fifth on another Douglas.

The thinning out process was perhaps naturally more evident among the smaller mounts, for only four times were posted for fourteen laps in the 350 c.c. class and six in the 250 c.c. section. As was generally expected, Meunier (Alcyon) arrived home a comfortable winner of the 350 c.c. section, scoring a deserving victory, his time, 3h. 55m., being 42m. 36s. slower than the winning 500 c.c. mount.

Vernisse Yvel's-Jap)—a French machine of British components—was first home of the 250 c.c. riders, Clech (Moto-Solo) gaining second place, with Jolly (Alcyon) as a close third.

Thus, Great Britain scored a decisive victory among the 3½ h.p. machines,

France claiming premier place in the 350 c.c., and a combination of interests in the 250 c.c. categories.

Order and Time of Finishers.

500 c.c. CLASS.

	Time.
1. A. E. Bennett (Sunbeam) ..	3h. 13m. 24s.
2. T. C. de la Hay (Sunbeam) ..	3h. 15m. 51s.
3. T. Sgonina (Triumph) ..	3h. 24m. 58s.
4. F. W. Dixon (Douglas) ..	3h. 38m. 14s.
5. J. L. Emerson (Douglas) ..	3h. 48m. 35s.
6. Perrin (A.B.C.) ..	3h. 58m. 20s.
7. Jacquin (Griffon) ..	4h. 3m. 32s.
8. Delahre (Rover) ..	4h. 18m. 24s.
9. Rolly (A.B.C.) ..	4h. 21m. 10s.
10. A. H. Alexander (Douglas) ..	5h. 2m. 12s.

350 c.c. CLASS.

1. Meunier (Alcyon) ..	3h. 55m. 0s.
2. Milland (Douglas) ..	4h. 14m. 01s.
3. H. R. Harveyson (Douglas) ..	4h. 38m. 40s.

250 c.c. CLASS.

1. Vernisse (Yvel's-Jap) ..	3h. 44m. 49s.
2. Clech (Moto-Solo) ..	3h. 48m. 39s.
3. Jolly (Alcyon) ..	3h. 49m. 18s.
4. Condert (Griffon) ..	3h. 57m. 13s.
5. Denley (Velocette) ..	4h. 1m. 04s.
6. Colombel (Griffon) ..	4h. 6m. 22s.

After the race the leading machines were examined and measured. The Sunbeam riders used 4 to 1 gears and aluminium pistons, whilst the four-valve Triumph had a Ricardo aluminium piston.

A CHAT WITH THE WINNERS.

First in the 500 c.c. Class.

"It certainly is a wonderful old engine, this Sunbeam," remarked Bennett, as he dismounted and wiped the oil and dust out of his eyes.

It was easier to get the winner of the Grand Prix race to talk of his machine than of himself. He quickly remarked, however, "I am not an American, as some of you seem to think. I was born in Canada, raced an Indian on the Canadian tracks, came over with the Canadian Army in 1915, and, well, I married an English girl, and that is sufficient reason for staying, even if I did not like the country so well as I do."

"Yes, it is harder than the T.T., for the speed is so consistent; but I do not think that it requires so much skill. Undoubtedly, it is harder on the engine, for there is no 'let up' from beginning to end. I knew I was in the lead for the first six laps, but after that I was not quite so sure of my position. However, I was

satisfied to run on three-quarter throttle until I had covered fourteen laps, and for the last four ran all out." His Sunbeam was equipped with Dunlop 26 x 2½in. heavy tyres, K.L.G. plugs, Amac carburetter, M-L magneto, Brooks saddle, Pedley knee grips, and used Castrol oil.

A Popular Second.

De la Hay, who came in second a little more than two minutes behind his team mate, was bubbling over with enthusiasm for his mount. "I blew a cylinder in practice, you may be interested to know," he said, "but had no trouble in the race. I made two stops for petrol, but had no need to stop the second time, and might have won if I had gone on. But what do I care, so long as a Sunbeam got the Grand Prix?"

Leader of the 350 c.c. Mounts.

Paul Meunier, on a twin-cylinder overhead valve Alcyon, remarked that he led

the race from beginning to end. "Although I do not think I was ever seriously threatened," he said, "I drove hard, getting all the speed I could out of my machine, according to the road conditions. Except when I overtook them I never saw the competitors in my class. I made two stops for petrol and oil, and never touched my tyres."

The winning Alcyon was equipped with Dunlop 26 x 2½in. tyres, used Claude carburetter, Renold chains, John Bull handle-bar grips, and Brooks saddle.

Anglo-British 250 c.c. Success.

The Yvel's, which won the 250 c.c. class, is a comparatively new machine of the French market, and is built up of English components, the engine being J.A.P. (side-by-side valve) with B. and F. carburetter, Enfield gear, and Drui forks. Dunlop tyres, K.L.G. plugs, Renold chains, and Castrol oil, were used in the race.

THE GRAND PRIX.

An impression of competitors at Le Tertre corner by "The Motor Cycle" artist on the course.

Features of This Year's A.C.U. Six Days Trial.

Team Prizes for each Class. Higher Speeds for 25 Laps at Brooklands.

PRELIMINARY regulations for this year's Six Days Trial, organised by the Auto Cycle Union, have now been issued, and reveal that the trial will be of a more technical nature than hitherto.

Starting from Brooklands on Monday, August 29th, there will be a preliminary test on the track before setting out, on the first day's route, which will be as follows:

FIRST DAY.—Brooklands, Staines, Maidenhead, Oxford, CHIPPING NORTON, Cirencester, Malnesbury, Slaughterford, Colerne (*Ditteridge*), Bath—138 miles.

SECOND DAY.—Bath, Weston (*Weston Lane*), Toghill, Dursley, Wickwar, Chipping Sodbury, Keynsham (*Darley Hill*), Whitechurch, Bishops-worth (*Dundry Hill*), Chewstoke, CHEDDAR, GORGE, Bridgewater, Spaxton (*Collier's Hill*), Kingston (*Cotterstone Hill*), Cromcombe, Stogumber (*Pitsford Hill*), Wiveliscombe (*Azford Hill*), Taunton—155½ miles.

THIRD DAY.—Taunton, Wiveliscombe (*White-field Rocks*), Haleigh's Cross, Luccombe (*Porlock*), Lymmouth (*Lynmouth*), (Lynton Station Hill),

(*Parracombe*), South Molton (*Ash Mill*), (*Frank-hill*), TIVERTON, (*Newtes Hill*), Honiton (*Station Hill*), Sidford, Lyme Regis, Morcombelake (*Baker's Cross*), (*Thistle Hill*), Axminster (*Sector Hill*), (*Stammerly Hill*), Marshwood, Broadwindsor, Chard (*Coombe Head*), Taunton—178 miles.

FOURTH DAY.—Taunton, Blagdon Hill, Wellington Hill (*Monument Hill*), Dunkeswell, Honiton, Crewkerne, YEOVIL, Sturminster Newton, Shaftesbury, Warminster (*East Knoyle*), Frome, Radstock, Bath—135½ miles.

FIFTH DAY.—Bath, Trowbridge, Maddington, Castle Hill, WINCHESTER, Petersfield (*Wheat-ham Priors Dean*), Alton, Binstead (*Crooksbury Pagle Hill*), Guildford, Ripley, Brooklands—132½ miles.

SIXTH DAY.—Twenty-five laps on Brooklands at minimum speeds varying from 30 m.p.h. in Class A to 45 m.p.h. for the largest solo machines. These speeds are approximately 5 m.p.h. faster than those set for the corresponding test last year, but are generally slightly below the average speed that was reached by those who completed the test in 1920.

Note.—The names given in italics and parentheses are test hills over 1 in 7 gradient. Those in capitals, luncheon stops.

The order of starting will be varied each day, and all fuel and oil replenishments

will be carried out by the Union in the presence of a member of the trade.

Five team prizes will be offered. One each for solo lightweights, solo medium-weights, and solo heavyweights, and also one each for light and heavy sidecar outfits.

The awards will be made on a machine's general reliability, hill-climbing, silence, brakes, economy, and condition, but the regulations are so framed that it is deemed impossible for a machine to qualify unless it reaches a certain standard on all counts.

Maximum rates of consumption of petrol and oil vary in each class, from 100 m.p.g. petrol and 1,800 m.p.g. oil for solo light-weights, to 45 m.p.g. petrol and 500 m.p.g. oil for the heavy sidecars.

No freak hills such as last year's Park Rash and Summer Lodge are included.

OFFICIAL RESULTS OF THE ILKLEY TRIAL.

OFFICIAL results of the one day sporting trial of the Ilkley M.C. and L.C.C., described in *The Motor Cycle* of the 21st, have now been announced. They are:

ILKLEY TROPHY (to be held for one year, together with gold medal and first-class certificate, for the best individual performance).—F. W. Giles (7 A.J.S. sc.).

SCOTT TROPHY (to be held for one year, together with gold medal and first-class certificate, for the best individual solo performance).—E. H. Wheatley (4 Triumph).

PALMER TROPHY (to be held for one year, together with gold medal and first-class certificate, for the best performance with a passenger machine).—H. Pattinson (8 New Imperial sc.).

OLAI TROPHY (to be held for one year, together with gold medal and first-class certificate, for the best amateur performance).—J. R. Wilkin-son (5-6 Rover sc.).

TRIUMPH TROPHY (to be held for one year, together with gold medal and first-class certificate, for the best trade performance).—W. Backhouse (4 Triumph).

WATSON TROPHY (to be won outright, for the best performance in the 1,000 c.c. classes).—R. A. Stacey (7-9 Harley-Davidson).

TEAM PRIZE (solid silver cigarette cases).—Leeds Motor Union: R. Horsley (2½ New Imperial), W. N. Clayton-Russell (4 Norton sc.), and H. Pattinson (8 New Imperial sc.).

GOLD MEDALS AND FIRST-CLASS CERTIFI-CATES (FOR THE BEST PERFORMANCES IN THE FOLLOWING CLASSES).

SOLO CLASSES.—250 c.c.: E. Manday (2½ New Hudson). 350 c.c.: F. E. Palmer (3 Ivy). 500 c.c.: W. L. Fincher (4 Triumph). 1,000 c.c.: A. K. Fitton (8 Brough Superior).

PASSENGER MACHINE CLASSES.—Sidecars, 1,000 c.c.: G. W. Wilkin (6 Martinsyde sc.). Three-wheeled runabouts: C. R. Waddington (9 Morgan).

FIRST-CLASS CERTIFICATES.

SOLO CLASSES.—G. Hill (3¼ Scott), E. Hawks (2½ Excelsior), A. R. Naylor (3¼ Sunbeam), G. S. Boston (3¼ Sunbeam), E. L. Boston (3¼ Scott), R. C. Bennett (2½ Federation), C. F. Hollyoak (2½ Federation), G. W. Shepherd (2½ Beaumont), C. B. Haigh (3¼ Scott), S. Parker (3¼ Sunbeam), J. P. Vickers (3½ Norton), J. Whalley (3¼ Sunbeam), H. S. Moorhouse (3¼ Scott), W. Cough (3¼ Scott), H. E. Ellis (3¼ Scott), F. E. Palmer (3 Ivy), S. A. Pearnley (3¼ Scott), R. Horsley (2½ New Imperial), B. B. Bointon (2½ Conlon-B.), A. Mercer (3¼ Scott), W. L. Gay (3¼ Scott), G. Hanson (3¼ Norton), and J. Whitley (4 Norton).

PASSENGER MACHINE CLASSES.—R. P. Rumsome (5 Lea-Francis sc.), W. N. Clayton-Russell (4 Norton sc.), W. E. Grange (6 Bradbury sc.), H. Read (8 Dot sc.), and W. Marriott (4 Norton sc.).

SECOND-CLASS CERTIFICATES.

SOLO CLASSES.—W. Bell (2½ Hudson), H. M. Batten (3½ Brough), E. W. Sunfield (3¼ Scott), W. Johnson jun. (3¼ Sunbeam), J. E. Slater (3¼ Sunbeam), A. Jackson (3¼ Norton), and G. A. Cox (2¼ O.K.).

PASSENGER MACHINE CLASSES.—W. Mitchell (7-9 Harley-Davidson sc.).

THIRD-CLASS CERTIFICATES.

SOLO CLASSES.—G. Clapham (3½ Scott) and Miss Dent (3¼ Scott).

POSITIONS FOR THE TEAM PRIZE.—1, Leeds Motor Union, 595 marks; 2, Harrogate M.C.C., 590 marks; 3, Scott Motor Cycle Co., 588 marks; 4, Bradford M.C. and L.C.C., 580 marks; 5, Ilkley M.C. and L.C.C., 570 marks.

STIFF TRIAL IN IRELAND.

THE Leinster Club ran off a trial for the Patland Cup on Saturday over a course of exceptional severity in the neighbourhood of Dublin. It was significant that only two entrants elected

to run sidecar machines, and both were non-starters. The proportion of non-finishers was high. The following completed the course: Greene (Enfield), Hill (Douglas), McGlade (Triumph), Parkes (Triumph), Carville (Triumph), Gilmour (Douglas), Murphy (Triumph), Rogan (—), Johnston (New Scale), Hemfren-shall (Rudge), Tracey (Sparkbrook), Fagan (Indian), Slevin (Velocette), Woods (Harley), Thompson (N.U.T.), and Daly (Triumph).

WESTERN CENTRE A.C.U. ELIMINATING TRIAL.

TO find a winner of the event, several interesting features were included in the Western Centre A.C.U. Trial on Saturday. The object of the trial was to find a "champion" for the centre.

First, two difficult circuits, of approximately fifty miles, and including eight test hills, had to be ridden non-stop. There were thirty-five entries, but only eleven qualified in the initial test. They were: L. Blick (7-9 Harley-Davidson), E. Jellyman (3¼ Norton), V. Austie (3 A.B.C.), S. Lewis (6 B.S.A.), F. S. Barnes (3¼ Sunbeam), J. A. Newman (7 A.J.S.), L. Paynter (3¼ Norton), F. Morgan (2½ Cotton-Blackburne), Eric Williams (3¼ Sunbeam), C. H. Dickens (4 Dene), E. Colmer (3¼ Norton), and H. M. Goddard (4 Triumph).

Finding a Winner.

Next came six circuits of a short route, with one test hill to be covered without removing the feet from the footrests. Finally a formula, based on petrol consumption, horse-power, and weight, was used.

J. A. Newman (7 A.J.S.) gained the honour, with L. Paynter (3¼ Norton) and H. M. Goddard (4 Triumph) as runners up.

The team prize went to the Stroud club, with Gloucester and Stourbridge second and third respectively.

Members of the winning team were L. Blick (7-9 Harley-Davidson), E. Jellyman (3¼ Norton), H. M. Goddard (4 Triumph), and N. W. Smith (4 Triumph).

An ordinary side-by-side B.S.A. converted to the overhead valve type by W. J. Chambers, of Belfast, who made the new parts necessary for the conversion, including the cylinder head.

GAMAGES.

The
Ideal Garment
for
Summer Wear

**THE
SHOWER-DUST™**
Motor Cyclists' Garment

The cloth from which these garments are made is specially manufactured for us, and is far more durable than rubber, and much better in appearance. It is so a great improvement on the Holland garment.

THE JACKETS are fitted with elastic winduffs in the sleeves, and the overalls are just slipped on, there being no fastening at the side whatever. They are put in position by an elastic cap under the boot, and can therefore be put on and off much easier, and in half the time of those made with buttons or button fasteners. All sizes in stock. Pattern and self-measurement forms sent free on request. Illustrated.

Townshend
PILLION SEAT.
(PATENTED.)

NOTE THE
HANDLE
AT REAR

**DESIGN—The Secret
of its Comfort and Safety**

In design, the TOWNSHEND Pillion Seat is "different"—in comfort and safety, superior—completely solving the problem of perfect Pillion riding.

Its difference is here emphasized. Note the rocker arms at each corner, which work in conjunction with strong lateral springs—forming a springing action which permits the seat to move VERTICALLY only, eliminates all danger of steering wobble and makes end or side sway, bouncing or bumping, impossible.

Seat is well padded on stout metal base, with handle at rear. No sharp edges, or moving parts to pinch the fingers. Strong, double-action clip fastening. Fitted on any carrier in 3 minutes.

Write at once for full particulars. Obtainable of all Dealers and Garages.

The Leatheries Ltd., Sampson Rd. North, Birmingham.

THE SADDLE THAT WON THE SANGSTER CUP & 3 GOLD MEDALS IN THE LAND'S END TRIALS.

Model 10 as illustration, £4 10 0.

ABSOLUTELY SHOCK PROOF.

Read what Mr. Short says—

Having ridden your Tan-Sad "No Hurts" Saddle in the recent Land's End Trials and being awarded 2 gold medals and the Sangster Cup, I feel it my duty to tell you again what I think of the Saddle. Having covered well over 600 miles in 2 days' riding, I think it is the most comfortable seat I have struck and I can honestly say I did not have the least sign of soreness, or stiffness in the back, nor did I receive a bad jolt the whole journey.

Wishing you every success,

Yours faithfully (signed) F. SHORT.

And what Mr. Boynton says—

I have pleasure in informing you that I used one of your "NO HURTS" Saddles through the Land's End Trials this Whitsuntide and have much to thank same for. Although some of the roads were absolutely vile, the comfort was a revelation unimaginable, and unless one had the actual experience of riding one of your saddles is almost unbelievable.

BENETFINKS, 107, CHEAPSIDE, LONDON, E.C.2.

In answering these advertisements it is desirable to mention "The Motor Cycle."

MISCELLANEOUS ADVERTISEMENTS.

PRICES.

ADVERTISEMENTS in these columns—first 12 words 3/-; and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **LIFFE & SONS Ltd.**, and crossed **& Co.**

Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Gentry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue.

Letters relating to advertisements should quote the number which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. Readers, who reply to Box No. advertisements are invited against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons in deal in perfect safety by availing themselves of our Deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt. The time allowed for a decision after receipt of the deposit is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays the postage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 10/-. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Liffe & Sons Limited. The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally anxious, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the notice as an indication that the goods advertised have already been disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

A.B.C.

A.B.C. late 1920, little used, fully equipped, licensed; £85, bargain.—Moss, Wem. [X6107]

ENGLEBERT TYRES

Super-reinforced

THE cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make. These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

The

Burlington

MOTOR CYCLE CO. LTD.

The Reason Why—

THE BURLINGTON SIDECARS

are so popular is to be found in the clever, distinctive design, honest workmanship, and elegant finish embodied in every model. They are thoroughly sound value and our recommendation is backed by hundreds of satisfied owners. Write for full particulars of all models including

'THE BIRDCATCHER'

No. 2 Speedy Model
(Illustrated)

Price, complete with apron

£28 10s.

That Douglas Drawbolt

in the 1915-1918 4 h.p. Models has a nasty habit of breaking. Our Douglas clutch conversion set entirely eliminates the "snag"—ask us how.

Your TRIUMPH

will be handier if converted into a foot as well as hand operative clutch model. We supply a neat, easily fitted pedal to achieve this. Price 4/4 including postage.

SANDUM DUAL PURPOSE SIDECAR

(PATENT.)

Approved by all the leading manufacturers, and suitable for any make of motor cycle. Finished in colours to suit.

A scientific production of a Single or Double Sidecar at will. By moving the seat back to the forward position and opening the back locker-lid a further spring back and spring seat are disclosed, suitable for a six-foot passenger.

The only family sidecar which is at the same time comfortable, elegant, inexpensive, and carries the weight in correct position, i.e., over the rear axle.

Insist that both your passengers shall ride in comfort, and not on make-shift dickey seats. A six-foot man can occupy either seat.

**42 Guineas (complete).
TO FIT ANY MOTOR CYCLE.
Body only, 21 Guineas.**

When ordering your Sidecar specify **SANDUM Patent SCREEN** for comfort, protection against rain, and simplicity of movement.

Ask for our Catalogue, which gives a complete range of **SIDECARS**, and prices, from **£16-16-0 upwards.**

Sole Distributors for

SENSATIONAL READING-STANDARD OFFER

17

Slightly Transit Soiled Tourist Solos with "Full Standard Guarantee." £140 NETT CASH.

Inclusive of usual Reading Standard equipment, Dynamo Lighting, Electric Horn, Luggage Carrier, Front Stand Pump, Tools, etc.

THE NUMBER CANNOT BE INCREASED. THE OFFER CANNOT BE REPEATED.

The guarantee given with each machine is precisely that given with the perfect machine at the ordinary price. There is no reservation of any kind.

The machines are complete in every respect and, except that the enamel and plating have suffered in appearance from the action of sea water and faulty packing, the machines are in no way below that pitch of excellence, efficiency, and durability which has made the Reading-Standard predominant in quality and performance.

17 Machines only. £140 each nett cash. CALL AND INSPECT REPRESENTATIVE MACHINES.

CURRENT PRICES.

marked the conclusion of another strenuous SCOTTISH SIX DAYS TRIAL.

One can imagine the relief of each Competitor when our last Milestone was in view, and the goal reached.

While making due acknowledgment to *John Bull Tyres* from whom we got the idea at Isle of Man Races, we trust that our Milestones, which were distributed over the course each day, were of some slight service to Competitors in this Trial, if so—we are satisfied.

MILESTONES
are like chapters in a book, or events in a lifetime.

ALEXANDER MILESTONES

will continue to be stepping stones towards that goal of perfection in

SERVICE TO OWNERS

which we are ever aiming to achieve. Each day we are adding another Milestone, and presently, extensive buildings in workshops and showrooms are being erected with the one aim of giving satisfaction to our many clients.

MEANTIME—CAN WE BE OF FURTHER SERVICE TO YOU?

SIDECAR Body Designs for the trade only. Working, coloured, pencil, or line drawings of original designs, also working drawings, full-sized or to scale. Cooper's Vehicle Journal, Ltd., established design to the coach trade for over 80 years. Consult us for designing new ideas.—20, Tudor St., London, E.C. [04]

SIDECAR ATTACHMENTS.

S
FOR

- SANDHAM, the smartest sidecar specialists.
- SANDUM Sidecars.—Best value in Olympia Show.
- SANDUM Chassis.—Insist on having our enclosed wheel type of chassis for safety.
- SANDUM Models.—The Exquisite 25 gns. and 26 gns. are of distinctive appearance.
- SANDUM Elite Sidecar, 27 gns.; the smartest car on the road; highly recommended in "The Motor Cycle".
- SANDUM Dual Purpose Sidecar (patented). A one or 2-seater sidecar as required in 5 seconds. 8 of body as our single-seater Elite. Luxuriously comfortable seating for 2 adults, with the weight in correct position over rear axle. Finished in colours, suit any make of machine, 42 gns.; bodies of 21 gns. The latest development of the 2-seater, designed by us, and approved by the recognised experts.
- SANDUM Featherweight Streamline Body, smart, racy, weight 18 lbs.; price £4/17/6.
- SANDHAM Engineering Co., Ltd., 336, Gray's Inn Rd., W.C.1. Phone: Museum 3427. Factory, 162 to 165, Pentonville Rd., N.; and British Works, Britannia St., W.C. [04]
- MIDDLETON'S Patent Spring Wheel Sidecars guaranteed 3 years.
- MIDDLETON'S Patent Unbreakable Chassis high-powered machines: Zenith, Harley Indians, New Imperials, Sunbeams, Blackburnes.
- INDIANS with kick starter on left present difficulty with Middleton's special model.
- MIDDLETON'S specialise in frame repairs of all kinds. Twisted motor cycle frames and promptly corrected.
- SECOND-HANDS of various makes for sale. 1 old sidecar taken in part exchange.
- MIDDLETON'S Spring Wheel Sidecars are not safer and more comfortable, but are later bad roads than rigid. They give to the bumps, dash into them.
- MIDDLETON'S, London's oldest established car makers, wholesale, retail, and export, Stroud Green Rd., Finsbury Park (near Tube). Phone: Hornsey 1584. [06]
- £22.—Few 2-seater side-by-side sidecars.—Boswell, 591, Foleshill Rd., Coventry. [X10]
- P. and M. Millford Chassis, good tyre and £6.—1, Bellingham Ter., Catford. [04]
- COACHBUILT Sidecar, new, underslung, complete £12/10.—2, Appian Rd., Bow, London. [06]
- SIDECAR, wicker, all complete, good condition; £4.—Mugridge, 225, Franciscan Rd., Tooting. [06]
- EDWARDES Sidecar Chassis, underslung, see hand; £5/10.—277, Camberwell Rd., S.E. [04]
- BARGAINS.—Shop-soiled high-class coachbuilt cars; cheap.—Booths Motories, Halifax.
- BARGAINS.—Shop-soiled underslung sidecar chassis; cheap.—Booths Motories, Portland Place, 1 fax.
- BARGAINS.—High-class coachbuilt bodies, colour.—Booths Motories, Portland Place, 1 fax.
- BARGAINS.—Shop-soiled £27/10 sidecar, Triumph or B.S.A.; £18/15.—Booths Motories, Halifax.
- BARGAINS.—Nearly new Henderson sidecar, Rudge, £16/15; Millford 27 gns. sidecar, new, £16/10.—Booths Motories, Halifax.
- BARGAINS.—New full-size coach body, locker seat, £6/19/6; cane body, 25/-.—Booths Motories, Halifax.
- SEVERAL Sidecars for sale, cheap; room wanted 57, Kenbury St., Camberwell, London.
- EDWARDES Sidecar Chassis, new, complete with fittings; £7.—277, Camberwell Rd., S.E. [04]
- SMART Sidecar, off Zenith, roomy, spring upholstered £7/15.—Pearston, 1, Station Rd., Epsom. [04]
- 4 h.p. Douglas, special bulbous back sidecar, 1 body; £18.—Osborne, Campbell Rd., Bedford. [04]
- UNDERSLUNG Coachbuilt Sidecar, 5-point construction; bargain, £9.—1, Bellingham Ter., Catford. [04]
- SIDECAR (Douglas) for sale, excellent condition; bargain, £15.—Slater, Adlethorpe, Bury, L. [04]
- EDWARDES Sidecar Chassis, underslung, new any machine; £9/15.—277, Camberwell, S.E. [04]

The A.C.U. Six Days Trials.

IT is unfortunate in many respects that this year's A.C.U. Six Days Trials will not receive the full support of motor cycle manufacturers. It is the most important event of the year, and the publicity accorded it brings before the public the capabilities of the modern motor cycle. For this reason, it is natural that the manufacturers hesitate when the regulations are considered to be of a nature tending to place their productions at a disadvantage.

It is the feeling that A.C.U. Six Days Trials have become too technical, and awards have been lost on technical grounds which are not understood by the public. We refer to this matter more fully on page 156 of this issue.

A Paradox.

A LONG letter from a prominent manufacturer, which appears elsewhere in this issue, shows very clearly in what way speed trials may become, from a spectator's point of view, the "slowest" of competitive events.

Such affairs do, indeed, tend to become unwieldy, especially if they are open to all, as the usual multiplicity of classes in which the same riders figure in each becomes a monotonous procession in which interest rapidly wanes; while, if the meeting is marred by defective organisation or unwillingness to undertake a proper share of the work on the part of officials, the affair may rapidly fall into chaos, and the results be valueless or the continuation of the meeting dangerous to riders and public.

The latter state of affairs may easily arise if the spectators become bored and restive, for it rapidly becomes increasingly difficult to keep them off the course; the lack of value in the results likewise may easily be the result of a protracted meeting, especially if hand timing be employed, for no one can expect a timekeeper to remain in the state of mental activity necessitated by his duty when at his post upwards of eight hours.

A wise ruling in all open speed trials would be that no rider should make more than three attempts on a machine of given capacity, no matter what number of classes he enters; his best time would then be counted. The running of both standing and flying start classes is surely unnecessary.

Too Much Running-in Required?

THAT every new motor cycle should be delivered to its buyer in a condition in all ways ready for road use is an ideal that is becoming daily more generally fulfilled.

Only in rare cases nowadays is "delivery tune" a legitimate subject for complaint by disgruntled riders who have discovered slack nuts or tappets out of adjustment during the maiden voyage of a glittering outfit, just uncrated. Careful workshop inspection systems, rigorous road tests, and, usually, the maker's keen regard for his reputation, save the 1921 rider from most of the post-delivery tuning that, rather less than a decade ago, formed the common lot of the enthusiastic buyer.

There is one detail, however, that still calls for improvement if motor cycling is to be the pastime of the million. We refer to the somewhat prevalent practice of delivering engines with very tight pistons and bearings, and relying on the commonsense and patience of the buyer to run them in with care—a process that may extend over nearly a thousand miles before the risk of seizure is entirely absent.

Admittedly, an engine made to fine clearances eventually becomes a far more efficient unit than one which is sent out in a condition popularly termed "sloppy"; the point is, however, that the running-in should be done, preferably, by some external mechanical means, before the engine leaves the works. One or two firms do this; but others, just as highly placed in the industry, are notorious for the long period of careful driving that must elapse before the throttle of one of their new machines may be opened with impunity.

A Prop Stand.

SOME while ago I pointed out that many utilitarian riders, especially doctors, would appreciate a single-leg prop stand for their solo mounts. Mr. Alfred Chater, of 90, President Street, Johannesburg, manufactures such a stand, employing a ball joint at the top of the near side rear fork, and a spring clip near the fork ends to hold the stand when out of use. Does any South African reader know this stand?

Instep Straps.

I KEEP a special cubby hole for motor cycling garments, which are normally too filthy to be stored in an ordinary wardrobe. The other day I sorted them over in search of wear for a trip which promised to need protection. The corner contained half a dozen pairs of waterproof leggings, and every single pair had at least one dud instep strap. Manufacturers still make these straps of leather. The strap is subjected to much friction in every case; to the maximum of wet whenever rain falls; and very often to heat and oil as well. No sane man would advise leather for such conditions; and the result is that the straps always give out long before the leggings themselves need be written off. Can no genius devise some more durable method of hitching the leggings to the insteps?

The Temple of the Sword.

AN old Roman religious cult maintained a solitary temple in a lonely grove, where an armed priest lived alone, sleeping and eating with a drawn sword ready to his hand. It was the law of the cult that whoever could vanquish the priest in fair fight might succeed to his post and the offerings of the faithful. Which things are a parable. There was a time when the Excelsior motor bicycle had the British market at its feet. Then came a time when Quadrants easily outnumbered all their rivals alike in competition entries and in private sales. Even to-day there are firms who, because their market has been good for a year or two, fancy that the agents will always compete frantically for their output. The real fact is that a

short period of unparalleled competition is at hand in the motor cycle industry, and that some of the young and newer firms are evincing unsuspected brains and enterprise. *No firm's market is assured for next summer.* Let them sleep with a drawn sword across their knees, or their temple will fall to another.

Those Long Exhaust Pipes.

THERE is a painful burn across all my fingers, so manufacturers will pardon the somewhat a tone of this paragraph. I have been riding a trade 'bus of first-class make, and for some miles was worried by a grinding squeak which defied location. Ultimately (I like that word, it can cover a lot) I found that the long exhaust pipe had a lot "give" in it, and was designed to clear (a) a leg of the stand and (b) the belt rim by $\frac{1}{8}$ in. respectively. Needless to say, it waggled against one or the other, against the spinning belt rim for preference, whereupon the friction created a whining suggestion of a main bearing on the verge of seizure. No remedy was possible, except to wire the fishtail to the stand leg for the period of the loan.

Pot-holes and Backache.

I AM no longer a blithe boy of twenty, and a paragraph must be taken as the opinion of a weak, timid old man. I am sitting hunched to write it. I have just done 210 miles of pot-hole main roads on one of our best standard touring machines—that is to say, a machine with a first-class fork, a standard saddle, and a rigid rear frame. Every twenty-five miles my spine developed such an ache that I was fain to dismount and smoke a pipe whilst my vertebrae settled back into their sockets. This is not good enough. Our roads are not likely to get better. Keen surveyors do their best, and the taxpayer finds millions of money, but the fast, heavy traffic of to-day only takes three months to batter the best road we can make into the semblance of a beach after a short-ripple tide has ebbed. The future of motor cycling will be largely restricted unless

Casual Comments.—

ade tackles the comfort problem good and hard. I could go so far as to say that it is the outstanding problem of motor cycle design. It is not for me to say whether we need spring frames, or softer saddles, or bigger back tyres. But I am quite emphatic on the principle—the modern road is far too rough for the modern machine.

Wanted, a Freak Hill for Practice.

WONDER if any hotel proprietor in the home counties has a really steep hill-side at the back of his house? What fun we could have if some enterprising person would lay out a short fancy freak hill with about eight hairpins in quick succession in the locality easily reached by the big clubs. Club meets could then include a pattern ascent by one of our rough-riding experts, followed by a sweepstake climb among the ordinary members. If such a hill could be laid out at Brooklands, say up to the popular stands near the members' bridge, we should be able to add a fresh attraction to club meets on the famous track.

Clean Ascent "With Palms."

IN the war various wangers secured sundry foreign decorations with such extras as palms or oak leaves or crossed swords. When I see a trial go up a freak hill, I always think that the 5% of the country who go up with their feet on the rests ought to have a little extra credit. The common or garden motor cyclist plunges and wobbles about, with his legs waving madly and thrusting his machine back to the perpendicular. The super-expert steers with his feet where they ought to be. In the official results both climbs figure equally as "clean cents." The difficulty of distinguishing between wobbling (to steady the machine) and foot-slogging (to assist a weary engine) is eternal, and made for trouble at the Scottish Six Days. So did the old bugbear of trying to differentiate between wheelspin and a good old-fashioned conk out. To my mind, whether a side-slip or a solo mount is concerned, there are just two sorts of climbs which are fit to be recognised, viz. (1.) Any old way of going up, provided your machine

never becomes even momentarily stationary. (2.) An ascent with your feet on the rests from start to finish.

The first might qualify for a gold medal; the latter deserves a gold medal with palms. Wheelspin ought not to be accepted as a mitigating circumstance. It is always due to one of three things—bad driving (too much throttle), bad path-picking, or bad design of the machine. In either case it deserves no mercy. If it is acute enough to bring the machine to a standstill, let the climb be recognised for what it is—a failure. If a club adopts some such principles, it will save itself no end of trouble, it will set its observers a simple task, and it will encourage good machines and good riding.

An Old Problem.

A BEGINNER has written me a rather priceless letter in which he enquires what road troubles he may expect. He has done pretty well in his first three months, except that his magneto switch shorted one day—*why* do people fit magneto switches anyhow? They are not the least use, and can puzzle a novice tremendously if they go dud. His main trouble has been lamps—of the gas variety, with side and tail specimens which jolt out at the least provocation. He has my hearty sympathy, especially as they now compel him to terminate his trip before moonrise, and convey his fairy to her parental domicile two miles away on the back step of his push bicycle. Does anybody know a really guaranteeable method of keeping these tiny gas burners alight on rough roads? I once got so pessimistic on the subject that I converted all my small lamps to the dry battery. On the other hand, I have had fairish service from D.A. and eke from using three separate generators—a big fellow for the head lamp, and toy sizes for the small lamps. But I have now been on electricity so long that my memories are rather blurred. Will somebody give my young friend sound advice?—that push bicycle step business is *too* heartrending, especially in a heatwave. [Yes. Let your friend fit one large generator for all lamps. At least two members of *The Motor Cycle* staff use gas lamps, and are just as keen on them as "Ixion" and others are where electrical installation is concerned.—ED.]

ENTHUSIASTS IN ADEN, where roads are few and far between, where riding is done at night because of the intense heat during the day, and where vegetation is so scarce and the only example in the neighbourhood is so prized that the riders shown insisted upon it being included in the picture! The motor cyclists shown are members of the Eastern Telegraph Co.'s staff. Their names, from left to right, are: Salt (4 Triumph), Taylor (4 Douglas sc.), Wilkinson (6 Zenith), Chambers (4 Triumph), Insall (2½ Royal Ruby), Blunder (2½ New Imperial), Fox (2½ Douglas), Laycock (4 Triumph), Redman (Triumph Junior), Gordon (2½ Indian), Moores (3½ Norton), Wilkin (4 Douglas sc.), Dobie (4 Triumph), Saunders (2½ Douglas), Jeffery (2½ Wolf), Kime (3½ Indian), Drucquer (Triumph Junior), and Loveday (2½ Royal Enfield).

THE POSSIBILITIES OF THE LIGHTWEIGHT FOUR-STROKE

A 350 c.c. Lightweight for Go-anywhere Service—Its Charms and Advantages.

SOME weeks ago the writer "covered" the Western Centre Two-day Open Trial in Wales on a 350 c.c. two-stroke machine with much less fatigue than would have been experienced with any but the most manageable of higher-powered mounts.

That experience made a great impression, and, when another occasion presented itself wherein the advantages of a small machine would be desirable, he decided to avail himself of the opportunity of testing a four-stroke of similar capacity.

The opportunity arose during the recent T.T. Races in the Isle of Man, for the writer's assignment in connection with that event was to be responsible for *The Motor Cycle* photographs over the "far" side of the course, from Kirkmichael, through Ramsey, and up to the Bungalow on the summit of the Snaefell Road. Such a roving commission demanded great mobility, for, as the races promised to be run off in shorter time than ever, as

little of the precious hours as possible would have to be lost in moving from point to point, thus ruling "foot-slogging" out of the question.

To shorten a long story, it suffices to say that a 234 h.p. sports model Royal Ruby with three-speed gear box was taken out from Liverpool to Douglas where it commenced a really hard week's service.

Exploring Forgotten Tracks.

In order to determine the best plan of campaign two days were spent in exploring the various roads over the Snaefell mountain: there are two roads

normally used, but having severe gradients, bad surfaces and a number of gates to be opened and closed, but, in addition to these the Ordnance maps indicate a number of tracks now fallen into disuse, every one of which was tried.

The buffer which the Royal Ruby received on the tracks was equivalent to the rough of "find-a-win-

The actual machine mentioned in this article was piloted through the Scottish Six Days, and obtained a gold medal. As a "one factory" product, the 234 h.p. Royal Ruby appeals to those who do not favour machines assembled from proprietary components.

The Possibilities of the Lightweight Four-stroke.—

trials, and on one particular track, over which it is doubtful whether a motor cycle has ever been before, there was great danger of the machine being lost altogether, because the road had degenerated into a watery morass, into which a plunge was made in the effort to get across by sheer impetus. The machine stopped, of course, and commenced to sink until even the hubs showed signs of disappearing beneath the surface. Standing on a tuft of reeds, frantic efforts were made, and, in hauling out the machine by main force, both hands on the left handle-bar, the latter was pulled so far up that, finally, it cracked; however, the machine was rescued and dragged to firmer ground, but the next mile, driving with one hand, over boulders and moss and stopping every few yards with the footrests wedged at each side of a deep rut and the back wheel spinning high and clear (notwithstanding that the Ruby's clearance is greater than most) was a nightmare. In all, that particular stretch of road, five miles in length, occupied about three-quarters of an hour, during which the engine revved continuously on low.

the machine was by no means new, being a works "hack," which was destined to go through the Scottish Six Days, in Hugh Gibson's hands, as soon as it had served our purpose.

The only points we can criticise adversely are the possibility of missing the middle gear, and the lack of flywheel weight, which makes a generous throttle opening necessary when starting from a standstill. In

THE FOUR-STROKE LIGHTWEIGHT GOES EVERYWHERE.

As described, a 2½ h.p. Royal Ruby was used for visiting many points during the T.T. races. (Top) Sulby River, easily forded, despite belt drive. (Left) A hairpin bend on the Sulby-Snaefell road. (Bottom) Garwick Bay, reached by a rough footpath of severe gradients and hairpin bends.

On normal roads, the speed of the 350 c.c. machine need be little short of that of mounts with larger engines, and it was found that, on ve-and-take roads, an average of 30 m.p.h. could be attained when desirable, and that the maximum speed was about 42 m.p.h.; curiously enough, too, the steering improves as the speed creases.

Such an engine, too, is very economical, both petrol and oil consumption being extraordinarily good. The three-speed gear worked admirably, but the control is too low to be conveniently operated by hand, and so the foot was invariably used, and it was brought home to the rider that the middle gear location on-the quadrant was not sufficiently positive.

Not a New Machine.

In all, some 250 miles of roads were covered, many, probably a third, being of the freak variety, and, beyond repairing the damaged handle-bar, nothing was done to the machine in any way: this is satisfactory, because

other respects, the machine was as fast, reliable, smooth running, powerful, and economical as one could wish a solo machine to be.

Standard Gear Ratios.

Incidentally, the gear ratios are 5¾, 8, and 12 to 1, and the chain-cum-belt drive is smooth and apparently trouble-free; no belt slip was experienced even after crossing the many watersplashes which were encountered during the various explorations described.

THE GRAND PRIX IN RETROSPECT.

Successes by British Machines leave a Lasting Impression in the Minds of French Enthusiasts. A Mile-a-minute Average on Loose Roads.

QUITE the most convincing demonstration of British motor cycle efficiency occurred in the French Grand Prix race last week. The event was described and illustrated in *The Motor Cycle* last Thursday, and of which the outstanding facts were that the

500 c.c. winner averaged	59.9 m.p.h.
350 c.c. " "	49.4 "
250 c.c. " "	43.0 "

In the two larger classes eighteen circuits had to be covered—193½ miles—and in the 250 c.c. section fifteen circuits—161¼ miles.

Throughout the long race three or four British 500 c.c. machines led the field, Bennett and de la Hay, though riding within twenty yards of one another, alternating for first position. After two laps only

four seconds separated Bennett (Sunbeam), Edmond (Triumph), and de la Hay (Sunbeam). The pace was hot at all times, many of the fastest men averaging a mile a minute for the laps, notwithstanding three difficult corners and two "S" bends.

In the 350 c.c. class Meunier's twin Alcyon early forged ahead, and maintained its position to the end. His average speed was 10 m.p.h. less than Bennett's (49.4 m.p.h. for 193½ miles to be exact); but his performance was none the less a fine one. This is the first time for quite a considerable period that a small V twin has scored such a distinct success in a classic speed event. It was also a victory for overhead valves. Douglasses were second and third, but were unfortunate in losing Kickham comparatively early in the race, due to a bad fall as a result of which Kickham will remain in France for three months. H. R. Harveyson (third) is the erstwhile successful rider of Indians; he crossed the Channel as a spectator, and only decided to ride at the last moment, and had not, in fact, seen the course before the day of the race.

Small British Engine Does Well.

A. Milner (Levis) led the "two-fifties" for more than ten laps, but fate in the shape of a very large flint eliminated him on his twelfth circuit. The Yvel's J.A.P., which won this class, however, is as British as its name is not—being assembled almost exclusively from British components; the engine, in fact, was transported by aeroplane a few days before the race. It averaged 43.0 m.p.h.

Scot versus Frenchman—a duel between A. H. Alexander (3½ Douglas) and a Gallic competitor on an Alcyon. (Inset) An impression of Le Vack (3½ Indian) at speed.

To return to the big event of the day, both Sunbeams rode a wonderfully consistent race—noticeable even to the most disinterested spectator—and thoroughly deserved to win; but had Edmond (Triumph) not apparently forgotten that the largest tank does not hold sufficient petrol for nearly two hundred miles at 60 m.p.h. "there might have been" the closest finish known in

motor cycle racing history. Neck and neck finishes in long road races are a rarity, and it requires little imagination to picture the excitement of the French crowd had the two Sunbeams and the side-valve Triumph entered on their last lap in the same close formation that they held for so long. (What a pity that it is not possible to start the T.T. riders simultaneously as in the Grand Prix!)

Nortons at one time were well in the picture, but unluckily experienced tyre troubles, though one rider changed a piston during the race. Douglasses, too, were handicapped by tyres due to the stony nature of the course. A.B.C.'s were greatly fancied in France, as they had performed so well in practice. Actually their first man—Perrin—was sixth at the finish.

Fast Side-valve Engines.

Although fitted with aluminium pistons, the engines of two Sunbeams and Edmond's Triumph were of the standard side-by-side valve type, and the impression their exhibition made on the French spectators cannot be

Two French lightweight competitors rounding the acute bend at Pontlieue. The leading rider has slowed down, so much so that he has found it necessary to assist with his feet. Note the artificial banking on the right.

Douglas, since trouble with a back wheel bearing caused him several stops.

Apart from the Franco-British nature of the event, additional international flavour was supplied by the presence of a fast American machine—Le Vack's T.T. Indian. He was well in the running for third place when he broke an exhaust roller. Maffei, the Italian Bianchi rider, met his Waterloo at Pontlieue quite early, which minimised the international interest of the event.

Next year it is to be hoped that there will be an even larger entry from all four great nations, although, in that case, it is to be regretted that it might not be possible to employ the excellent simultaneous start!

(Left) Competitors lined up a few minutes before the start of the "Senior" class.

(Above) Replenishment depots for men and machines—the majority appeared to be fully licensed bars, but both J. Emerson (3½ Douglas) and H. Hassall (3½ Norton) are wisely intent on their mounts.

The Grand Prix in Retrospect.—

Noteworthy this year, also, was the large representation of 250 c.c. lightweight machines; France continues to appreciate and specialise upon the true lightweight, and that is why Milner's lead was so pleasing.

Many British readers and some British manufacturers do not, even now, realise the importance of the Grand Prix, the intense interest taken in it, and the enormous amount of preparatory work carried out on the course. For instance, very substantial barricades were erected by the mile, and literally regiments of soldiers kept the roads clear of casual civilians.

Practising Cars Maul the Roads.

It was not the fault of the organisers that the roads were covered with stones at many points; 100 m.p.h. cars practising for the car race on the succeeding day were responsible for that. Some idea of how rough the surface was in places may be gathered from the fact that the winning Sunbeam's back rim had one kink so huge as to show light under one side of the tyre beading! Apart from Bennett's one fall, the two Sunbeams enjoyed no-trouble runs. One well-known rider expressed the opinion that large tyres, ridden soft, were best for the existing conditions.

The spectators included many prominent Continental motorists—we noted Count Kolowrat, the well-known Austrian sportsman, following the proceedings keenly—and all were impressed by the sturdy and symmetrical appearance of the British machines in comparison with the squat and complicated-looking French mounts, no less than by their remarkably superior reliability as evidenced in the results.

* * *

BREVITIES.

Sunbeams used transparent filler caps; Edmond's Triumph did not; Edmond ran out of petrol. Is this a case of cause and effect?

* * *

Heard a little way down the course, the mingled sound of the exhausts in the massed start suggested an imminent attack by a very large swarm of bumble bees about the size of elephants!

* * *

How the race progressed may be gathered from the following tables of lap positions at various periods during the contest:

SIXTH LAP. 500 c.c. CLASS.

	Time.
1. A. Bennett (3½ Sunbeam) ...	1h. 3m. 33s.
2. T. C. de la Hay (3½ Sunbeam) ...	1h. 3m. 38s.
3. F. G. Edmond (3½ Triumph) ...	1h. 3m. 47s.

350 c.c. CLASS.

	Time.
1. Mequier (2¼ Alcyon) ...	1h. 16m. 44s.
2. Milland (2¼ Douglas) ...	1h. 19m. 51s.
3. Dubost (2¼ D.F.R.) ...	1h. 27m. 3s.

THE START OF THE 250 c.c. CLASS.

France has always shown affection for light motor cycles, the enthusiasm for these miniatures being exemplified in the entry of thirteen machines for this class as against seven for the 350 c.c. class.

TENTH LAP.

500 c.c. CLASS (All under two hours).

	Time.
1. F. G. Edmond (3½ Triumph) ...	1h. 46m. 42s.
2. A. Bennett (3½ Sunbeam) ...	1h. 47m. 56s.
3. T. C. de la Hay (3½ Sunbeam) ...	1h. 47m. 57s.
4. Marc (3½ Alcyon) ...	1h. 51m. 23s.
5. F. W. Dixon (3½ Douglas) ...	1h. 52m. 47s.
6. C. Sgonina (3½ o.h.v. Triumph) ...	1h. 53m. 58s.
7. H. Le Vack (3½ Indian) ...	1h. 54m. 0s.
8. Pinney (3½ o.h.v. Triumph) ...	1h. 55m. 58s.
9. Pean (3½ Peugeot) ...	1h. 58m. 46s.

350 c.c. CLASS.

	Time.
1. Meunier (2¼ Alcyon) ...	2h. 10m. 34s.
2. Milland (2¼ Douglas) ...	2h. 16m. 4s.
3. Dubost (2¼ D.F.R.) ...	2h. 33m. 6s.
4. H. R. Harveyson (2¼ Douglas) ...	2h. 48m. 47s.

FOURTEENTH LAP.

500 c.c. CLASS.

	Time.
1. T. C. de la Hay (3½ Sunbeam) ..	2h. 31m. 36s.
2. A. Bennett (3½ Sunbeam) ..	2h. 31m. 39s.
3. C. Sgonina (3½ o.h.v. Triumph) ..	2h. 39m. 12s.

IMPRESSIONS OF THE GRAND PRIX RACE.

The starting and finishing point on a fast stretch where the grandstands were arranged. The big scoreboard will be observed on the left. In the foreground is E. Kickham, on a Douglas.

(Centre, left) A. Bennett and T. C. de la Hay ($3\frac{1}{2}$ Sunbeams) as they rode—almost side by side for many laps. They finished first and second. (Centre, right) This huge cylinder of petrol awaited F. G. Edmond (Triumph), who was among the first three from the start, leading on the seventh lap, but ran out of petrol on the eleventh circuit. Edmond is seen at his depôt after his unfortunate retirement. Bottom) Froment ($2\frac{1}{2}$ Labor) negotiating the hairpin bend at Pontlieue at the Le Mans end of the course.

TOURING with a LIGHTWEIGHT SIDECAR

Through Nine Counties on a Small Two-stroke Outfit.

SO much have two-stroke lightweights improved of recent years that they are no longer regarded as purely solo mounts. Last Olympia Show revealed that many makers had sufficient faith in their little valveless engines to exhibit them fitted in small but sturdy frames to render them suitable for attaching a sidecar: what was more, they staged complete outfits at figures in the neighbourhood of £100.

All this was not due to any recent discovery on the manufacturers' part—private owners had tried the little machines with sidecars and had not found them wanting. The writer was one of these, and this spring a fortnight's tour through nine counties, including Devon and Dorset, was undertaken with success. This, I would remind the reader, with a motor cycle equipped with one of the much-maligned three-speed hub gears.

Unnecessary Luxuries Discarded.

Naturally, with so small an engine, we refrained from carrying spare tins of fuel and such luxuries as spare wheels. Nevertheless, there was quite a large amount of luggage in addition to the camera and its *etceteras*.

The weather—wet up to half-an-hour of starting—turned out gloriously, and we enjoyed complete immunity from even the smallest shower.

Our route from the Midlands was *via* Bromsgrove, Worcester, Tewkesbury, Gloucester, Cain's Cross, missing Stroud by bearing right for Nailsworth, where we purchased petrol at the only garage we encountered open that day (a Sunday), and very thankful we were to obtain it.

A delightful place is Nailsworth, with its terraced houses quaintly situated amidst trees of many hues; but the climb out of the place necessitated dropping into second ($8\frac{1}{2}$ to 1). At Bath we took the Newton road, turned left at the Globe Inn for Marksbury, Hallatrow, and Chewton Mendip, where we turned right for Cheddar.

The entrance to the Gorge from above was enthralling, the great towering rocks providing an in-

spiring spectacle. One goes down and down without a break for about three miles. Great care has to be exercised in rounding some of the sharp "S" and "hairpin" bends, and we confess to a feeling of relief when at last we arrived at the delightful village nestling at the

base, where we noted that the cyclometer registered 113 miles for our first day's run.

Off the Beaten Track.

The way out of Cheddar was nothing to be compared to the entrance *via* the Gorge, and nine miles soon brought us to Wells and its cathedral, at which we halted for some time before setting off again for Taunton and Exeter. About five miles beyond the latter town I took the wrong turning, and later, by means of Bartholomew, found that we were on a Roman by-road, which eventually led us up 700ft over Great Haldon Hill, and, fearing that bottom gear (11 to 1) was not low enough for the diminutive engine I jumped off near the top and ran for about thirty yards. It was the first occasion the engine had required assistance, and I realised that a lower bottom

gear would have been better for touring in Devon. The glorious five-mile run down into Newton Abbot, however, was ample compensation for the climb.

Our second day's run of ninety-two miles ended at Torquay, and as it was our first visit to this Devonshire resort we gave the engine a rest and thoroughly enjoyed a lazy day. The coast scenery, viewed from high up above Ansty's fair cove, was magnificent. With coloured rocks varying from white to deep red, interspersed with thick foliage and, above all, the great expanse of English Channel—truly, the scene was one to be remembered.

From Torquay our direction was north-east, and we hugged the coast as much as we could, thence along the cliff road to Shaldon, across the long wooden bridge to Teignmouth, then on through Dawlish, following the broad estuary of the Exe.

Near Exminster we crossed the river, and after passing through many charming villages we reached

The writer and his passenger on the two-stroke Regal-Peco.

Touring with a Lightweight Sidecar.—

Exmouth. Beyond this coming resort we managed to lose ourselves, and, in the process, discovered what must be Devon's loveliest village—Littleham. There was a long halt in that Devon Arcady.

Failure without Disgrace.

After pursuing our journey for some eight miles, we encountered Peak Hill, near Sidmouth. The passenger walked this—at least the last fifty yards of the hill. It was rough as well as steep, and the descent to Sidmouth on the other side was even worse. It will be remembered that this road, in the reverse direction, caused considerable trouble to competitors in the last London-Exeter-London Trial.

I may say that this portion of our tour was not according to the route provided by the A.C.U., but I have no regrets and would go the same way again, —but with a lower gear!

Trow Hill, the other side of Sidmouth, another of the "London-Exeter" test pieces, proved to be the steepest hill of all, and its hairpin bend halfway up made caution necessary—a hill I think I should omit from any future tour in that district, no matter what I am astride.

On reaching Lyme Regis we decided to cry a halt with only sixty miles to our credit for the day. It was here that a resident fell in love with my outfit and expressed a desire to purchase it, but there was no business done. My Regal-Peco-Watsonian is one of the family. He marvelled at the engine's capabilities, yet really wondered whether we should get through our tour! It was evident that his education on the power of modern two-stroke engines had been neglected.

Switchback Roads.

Rain fell in the night, but when we were ready to start at 9.30 next morning it had ceased, and, shortly after, the sun came out gloriously. The climb out of Lyme Regis was severe with a very greasy surface, but the Peco roared up tunelessly. To Bridport the road was of a switchback character, after which there was a steady five-mile rise to 716ft., followed by the most enjoyable "coast" of our run, down to Winterbourne Abbas, a Dorset village gem, that forced us to halt.

①

(3) 'Midst the crags at Cheddar.

Touring with a Lightweight Sidecar...

The usual crowd of village children gathered while a "snap" was being taken, and only one of them was not impressed with our junior passenger machine; this was a little boy whose father possessed "a Hindian," as he proudly informed us.

After an *al fresco* lunch, our route was through Dorchester and Bournemouth, to Lymington, and, after another toll, we crossed the silent Solent to Yarmouth, I.O.W. Although only $4\frac{1}{4}$ miles across, the fare was 3s. 6d. each for machine and sidecar and 2s. each for passenger and myself—11s. in all. Surely this will rank as the dearest four-mile journey in England! Within fifteen minutes of landing on the Island, we had reached the home of friends, with another ninety miles to the credit of our machine.

Three Up in the Isle of Wight.

Many of the Island's best "bits" were visited "three up," and having lowered the gear to $1\frac{3}{4}$ bottom no shedding was necessary. To Yarmouth (still another toll). Totland Bay, Alum Bay, Brook, Brighstone, and on to Carisbrooke was a wonderfully varied run. Yet the best is, without doubt, along the Undercliffe to Ventnor, Bonchurch, and the coast to Shanklin, Sandown, inland to Brading, and Ryde, returning *via* Old Newport and older Shalfleet.

The Island was destitute of motorists, and it is easy to guess the cause with such heavy fares staring

one in the face at the docks ticket offices. The Island roads were wonderfully improved since my previous visit, many bad corners having disappeared and the surfaces tarred.

We were sorry to leave the Isle, and sorrier still to part with another 11s.—for the crossing was rough!

Our return was through the New Forest, Salisbury, Amesbury, Park House, Collingbourne, Ducus, Savernake Forest (where we had to shelter from our first shower), Marlborough, Swindon, and Highworth—a total of ninety-two miles for the day.

Next day's route (and the last) was *via* Stow-on-the-Wold, Broadway, Evesham, Alcester, and home, the day's run being eighty-two miles.

Our total mileage was 600, and $7\frac{1}{2}$ gallons of petrol were used, working out at 80 m.p.g.; three pints of Vacuum A served for lubricating.

There were no punctures to record, but I used no fewer than four rear brake blocks! The original one I lost on the Wight, and three others I purchased proved absolute "duds," by the time home was reached the last one being a mere shred.

The desire to see those lovely Devon scenes again is very keen. We had no difficulty in finding suitable accommodation, and the charges were most reasonable. The Peco engine behaved splendidly, and once more proved the joy and success of touring on a lightweight sidecar.

A.A.S.

A 20 M.P.H. CATERPILLAR.

A Remarkable Machine Capable of Cross-country Service.

AT the conclusion of last year's A.C.U. Six Days Trials disgruntled competitors sarcastically opined that to emerge successfully from such a severe trial, a caterpillar track was a necessity. Little did these critics imagine that experiments were being made by the Department of Tank Design and Experiment, with a view to ascertaining whether it were possible to steer such a machine by deflecting the track. The principle adopted is that by laying down the track in a curve the machine follows the track.

A Flexible Track.

A pair of ordinary handle-bars are fitted, the centre line of which passes through the track near the point where it ceases to be in contact with the ground under normal conditions. The handle-bars control the movement of a front fork which carries the forward pulley wheel of the track, which is of flexible rubber, and it is obvious, therefore, that when the handle-bars are moved the track is deflected, the front portion of the track forming an obtuse angle with that portion of the track in contact with the ground. Actual demonstration has proved that the machine is easily steerable.

Balance, however, proved to be somewhat difficult at first, but once mastered the running of the machine was particularly smooth even over rough meadow-

ORGANISERS!

A caterpillar "scooter," engine with a $2\frac{1}{2}$ h.p. Douglas unit, capable of running at 20 m.p.h. over meadowland or broken country. It has been evolved at the Dept. of Tank Design and Experiment for the purpose of testing out the possibilities of employing flexible tracks, steering without braking and skidding.

land at 20 m.p.h., while small hard obstacles could be negotiated without transmitting any shock to the rider.

As a novelty the motor cycle caterpillar is distinctly interesting, and

might offer certain possibilities for military purposes, although the machine is built as a preliminary experiment in connection with larger vehicles of the caterpillar type.

PASSENGER MACHINE TOPICS.

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Collated by "Vedette."

IF sidecar owners are to be judged by the majority of sidecars on the road, one must classify them as four distinct types: (1) The "sporting" owner, who has an occasional passenger and a featherweight sidecar; (2) the more sedate driver with a wife and, perhaps, one child; (3) the family man with a large number of juveniles, for whom he has to provide accommodation; and (4) the man who buys a sidecar outfit purely for utilitarian purposes.

A five-seater outfit. The 8 h.p. Vindec-Jap with a sidecar built for three adults. With a pillion seat, five adults can be accommodated on the outfit.

of six without recourse to the pillion. Brown Bros., Ltd., of Great Eastern St., E.C.2, are also offering a "full size" Vindec outfit, which is illustrated. As will be seen, the outfit is very complete in its equipment, which includes hood, screen, side curtains, luggage grid, petrol tin carrier, rear locker for tools, Magdyno lighting and ignition set, and interchangeable

wheels with spare. The chassis is of pressed steel, and the sidecar body accommodates three adults.

(Top) A new 8 h.p. Trump-Jap sporting model.

(Left) The Tritube sidecar chassis used on a Hawker lightweight in the Scottish Six Days.

(Bottom) The "X" Company's limousine taxi.

In all these four main divisions there are the experienced and the inexperienced, the astidious faddist, and the happy-go-lucky, anything-will-do enthusiast, the comparatively wealthy, and the man to whom the cost of a new tyre or belt is a serious item.

* * *

There are now sidecars on the market for every class of buyer, including the man who requires seating accommodation for his wife and four or five children. We recently illustrated an Acme outfit which comfortably accommodates a family

Before the war Trump motor cycles were as well-known as most makes then on the market, and the revival of the old name is not without interest to motor cyclists of to-day. The newly re-formed company is located at Weybridge, and, among other models, markets a fast, J.A.P.-engined twin, which no doubt will appeal to the sporting sidecarist.

* * *

A lightweight chassis, consisting of three straight

Wood is largely used both in the cycle frame and sidecar chassis of this remarkable home-built outfit. (Above) How the timber frame is arranged. (Right) Mr. Beaumont's sidecar, with its full complement of passengers.

tubular members, was used in the little Hawker two-stroke in the Scottish Six Days. It is known as the Tritube. The lugs are of mild steel, and there are no bends in the construction, while the axle is of 2in. x 14 gauge tubing, provided with a spring and ball joint taking the front end of the body. The rear part of the body is suspended on two helical springs. The weight of the chassis is only 25 lb. and of the body 20 lb. It is manufactured by Messrs. Henry and Leslie, Ltd., 133, Clifton Road, South Norwood, London, S.E. 25.

* * *

The general use of the motor cycle and sidecar taxi in London has not yet materialised, although vehicles of this kind are being employed with success in the provinces. The "X" Motor Cycle Co., of Parkfield Road, Torquay, S.7, has, since July, 1919, carried 2,500 passengers in each of its taxi-sidecars, and has found this form of vehicle extremely popular. A large percentage of this mileage, however, has been covered on trips into the beautiful country surrounding Torquay. This firm has now produced the comfortable vehicle illustrated on the previous page. The body is mounted on a special chassis, marketed by the United Aircraft Co. A special feature of this chassis is the link plate which, connected to the rear fork of the motor bicycle, terminates the rear end of five tubes which form the main structure. The interior of the body is luxuriously uphol-

A32

stered, whilst the V shaped windows at the front can be opened, as also can those at the sides. Either the complete outfit or the sidecar and body can be supplied.

* * *

From time to time there appear in the pages of *The Motor Cycle* particulars of motor cycles assembled by readers, but very few have had the pluck to tackle the complete outfit. Mr. H. W. Beaumont, of Ipswich, has not only done this, but he has ideas of his own on methods of construction. His very praiseworthy effort is illustrated on this page, wood being used extensively.

The wood used is ash, with steel plates and bands to strengthen the joints, while the sidecar body is three-ply over a cedar frame. Sprung fore and aft, and with the sidecar wheel also sprung, the outfit, we are told, is roadworthy and comfortable. It has an 8 h.p. Rex engine, fitted with a Philipson pulley and a two-speed hub gear. Not the least interesting feature is its equipment of two carburettors—a small one for traffic driving with an ordinary B. and B. with W.S.R. jet for general running. So far the outfit has covered about 600 miles without trouble. Its weight is 460 lb.

* * *

A new type of windscreen known as the Coupé has recently been introduced by T. A. Simpson, 66 Gravelly Hill, Erdington, Birmingham. As will be seen from the illustrations, it may be used as an apron

The last in sidecar protection—the Coupé combination hood and screen

when the sidecar is empty, and forms a hood when in position. Side curtains are provided for stormy weather, and it appears to give most of the advantages of an enclosed vehicle without its weight. The hood is constructed on tempered spring

Passenger Machine Topics.—

steel, capable of straightening out when released from the semi-circular formation, and of sufficient strength to keep the hood perfectly rigid. The price with two side curtains is four guineas.

* * *

There are two kinds of sidecar bodies equally well-known as "sporting." The first of these is the slipper-like affair, usually fitted to lightweights. The second is much more commodious, and generally follows the outline of a torpedo. I have before me illustrations of two of the latter type, the first made by the well-known Bowser firm, and the second a Rennoc model No. 448, which is specially designed for heavyweight machines. Incidentally, a third sidecar following these outlines

A sporting Rennoc sidecar specially designed for heavyweight machines.

the illustration was photographed on the 1 in 4 section of the Brooklands test hill, where it was held by its brake without assistance from engine compression.

* * *

The present state of some of our roads brings the quality, or otherwise, of sidecar comfort into the minds of both driver and passenger. With a well-

sprung sidecar, well upholstered, the passenger rarely has cause to suggest to the driver that it is advisable to slow down for the very good reason that the driver, with only a pair of saddle springs between him and the road shocks, is the first to recognise the need. Probably 90% of drivers will be unanimous that the passenger has the best of it where shock-absorbing devices are concerned. Personally, I have found it so until quite recently, when I took delivery of one of the new Terry spring saddles. Now it is my pas-

A roomy two-seater Bowser model, and an attractive-looking sporting model sidecar by the same makers.

comes to my mind in the Watsonian R34, of which many are now seen on the road.

* * *

As multi-seated sidecars are now so popular, it is not without interest to know that Messrs. Bowser and Co., of Leeds, claim to have been the first firm to place such types on the market. This firm, therefore, should have had experience in the requirements of owners of this type of vehicle. An illustration is given on this page of one of the latest Bowser two-seaters, from which it will be seen that quite an attractive body has been produced to accommodate two adults.

* * *

Very few standard motor cycles are fitted with a brake which is held on permanently when required. The P. and M. is one of the exceptions. Such a brake is particularly handy if it is found necessary to leave the machine at a standstill on a gradient. The outfit shown in

senger who regulates the pace over pot-holed roads, for, to date, I have never enjoyed such real saddle comfort on a sidecar outfit.

* * *

It may be recalled that the Terry saddle consists of a number of light coil springs on a frame approximating in shape to that of a large leather saddle. These springs are covered by a felt pad with a leather cover. At present I am wondering how the pad will wear, but the prospect of having to renew this does not unduly worry me—the comfort provided makes it worth while.

* * *

When purchasing a proprietary sidecar, care should be taken to specify a wheel of the correct size; two cases of bad steering recently were traced to the use of $26 \times 2\frac{1}{2}$ (o.s.) sidecar wheels alongside machines with " $26 \times 2\frac{1}{2}$ for $2\frac{1}{4}$ " tyres; the latter are approximately $27\frac{1}{4}$ in. in diameter, therefore good vertical alignment is rendered difficult.

A P. and M. outfit held stationary on a 1 in 4 gradient by the ratchet brake.

The Future of the British Motor Cycle Overseas.

Extracts from a Paper Read at the First Oversea Motor Trade Conference.

By MAJOR H. R. WATLING, General Manager of the British Cycle and Motor Cycle Manufacturers' and Traders' Union.

I SHOULD like to say at the outset that there is now a strongly developed view that although there will still be a steady demand for British cycles and motor cycles in the United Kingdom, yet the real future (especially of the motor cycle industry) will lie in the ability of the British manufacturer to recapture the markets he had prior to the war, and the success with which he is able to establish himself in fresh markets.

What has been Done.

It must not be thought that the British manufacturers heretofore have been unmindful of the overseas markets, but one must be ready to admit at once that much ought to be done to improve trade practice so that the competition of foreign manufacturers may be adequately met. Lest we should depreciate our efforts too greatly, it is well to remind ourselves that in 1920, a year during which there was an abnormal demand for cycles and motor cycles for home consumption, the total value of the export trade of cycles, motor cycles, tyres, specialities and accessories thereof amounted to not far short of £10,000,000.

Another important point to remember is that, as far as can be ascertained, the approximate value of the overseas trade of the American cycle and motor cycle industry during 1920 amounted to £5,000,000. When it is remembered that American motor cycles and parts to the value of approximately £1,500,000 were imported from the U.S.A. in 1920 it can be seen that the British cycle and motor cycle industry as opposed to the American is yet in a fairly sound position. Nevertheless, we are not satisfied with the present position.

An Individual Industry.

One of the difficulties which has to be overcome is that, speaking generally of the British road vehicle industry, it is a young industry, and for that reason is yet a very individual industry, and manufacturers therefore find a larger number of points of individual interest than they do of collective or common interest, but I must approach the subject from the point of view of the Union, the only organisation in the cycle and motor cycle industry which represents a collective interest. Therefore, I am touching to-day upon the points which are being emphasised by the Union, and to which the earnest attention of British manufacturers is being called.

The following points are being urged:

- (a) A definite allocation of production for the overseas markets.
- (b) Proper agency representation.
- (c) Personal investigation of the special condition of the markets.
- (d) Proper appreciation of the trading points on which local agents lay stress, e.g., discounts, publicity, support of competitions, etc.
- (e) The carrying of stocks and adequate service to the user.
- (f) Making the best use of the Department of Overseas trade and the local consular officers.

The development of the overseas trade by the British motor cycle industry affects every motor cyclist—the more machines that are sold, the cheaper they will be; the greater our overseas trade, the better will be the nation's credit, and cost of living will be reduced. Apart from these two main facts, every patriotic rider wishes to see British motor cycles pre-eminent overseas—he likes to think that sister machines to his own are being used all over the world. This being so, the paper by the general manager of the British Cycle and Motor Cycle Manufacturers' Union will be read with interest. Major Watling is himself a keen motor cyclist, and attends most of the big trials to obtain first hand knowledge of their conditions, and the capabilities of the modern motor cycle.

I am pleased to be able to say that the last twelve months has shown a great stimulation of interest amongst all classes of manufacturers, and there is a real intention to sell in overseas markets.

Colonial Models.

The export trade is realised to be of such importance to both the technical and commercial aspects of the industry that the attitude of the designer has sustained a distinct modification in what is known as the "Colonial" model, for use where road transport and road facilities are less than they are in Western Europe.

It is often assumed that a large engine with heavy frame and equipment are the absolute essentials for what are popularly described as "colonial" conditions.

I freely admit that competitive machines from other countries generally achieve their purpose, principally because very heavy materials are used in a frame in which a very weighty and large engine has been incorporated.

I venture to suggest that the result has been to produce an unnecessarily heavy, over-powerful, and thoroughly uneconomical machine. Strength and power are not necessarily adequately obtained solely from weight and size.

At any rate, although this is my own personal opinion, I venture to think that the lighter, better constructed, smaller-engined British machine will in most cases achieve all that is required.

Selling versus Running Costs.

Perhaps somewhat too much stress is laid upon the question of the original selling price. I think that this point has become too much of a fetish, and too little regard has been paid to the subsequent running costs.

The British designer produces what I think is a thoroughly satisfactory and economical machine, and has not in mind the objective of producing a machine from the standpoint of cheap manufacture and low initial cost alone. I believe in the long run this view will be accepted

as right, and that the world's markets in due course will pay such attention to accuracy of design, finish, and low running costs as never before.

The day is rapidly passing (even in the countries where the spending power is still high) when the user will be content with paying the expenses entailed by the use of an unnecessarily powerful, weighty, and uneconomical type.

That the smaller British machine is capable of doing all that can be reasonably required of it under really bad conditions is amply shown by various competitions, including the recent International Tourist Trophy Races.

The Aims of the Manufacturers' Union.

May I, in conclusion, mention that although, as I say, we are an individualistic industry, and although we must at present leave individual manufacturers with power to deal with this matter as each thinks fit, yet the Union is not itself idle in the matter of overseas trade; and in connection therewith, may I say it is functioning in the following way:

(a) It is constantly in touch with the Department of Overseas Trade, the Foreign and Colonial Offices, etc.

(b) It represents the views of British manufacturers in connection with taxation, tariffs, and the general development of British interests.

(c) It works closely in touch with the Federation of British Industries, the press, and sister associations.

(d) It has sent representatives abroad to discuss with British representatives and foreign Governments the incidence of foreign tariffs.

(e) It is compiling a list of agents, clubs, garages, and similar societies and interests overseas who are likely to buy British products.

(f) It organises an annual show, to which foreign buyers are invited, and particulars of the show are circulated broadcast throughout the world in four languages.

(g) It disseminates in various ways information as to current problems of the industry for insertion in the technical and general press throughout the world.

(h) It distributes trade catalogues of interested manufacturers to chambers of commerce, foreign trade buyers, and the like.

(i) It has under consideration a scheme of general publicity by means of newspaper advertisements, posters, and the like.

(j) It has under consideration co-operative publicity abroad, and co-operative selling schemes by a group of non-competitive manufacturers.

(k) It prepares reports upon general trading conditions in foreign countries, distributes particulars of tariffs, trade opinions, etc.

Amongst other schemes which are under consideration, but have not yet been definitely formulated, is the proposal to send a trade ambassador to various of the world's markets.

Cooling the Plug.

TO cool the plug of a two-stroke engine is the aim of the deflector designed by S. Oddy, 48, Sussex Street, Middlesbrough. Although somewhat

A device for cooling plugs of two-stroke engines.

clumsy in appearance, it has proved most efficient in action. It is made of sheet aluminium.

Detachable Sparking Plug.

WITH a brass body copiously drilled, the Molla plug, it is claimed, cannot overheat. It has two porcelain insulators (the main one being also drilled), which are taper fits in the plug body, and are held together by a small

An easily dismantled sparking plug—the Molla

nut and spring washer on the central electrode. The plug points are adjustable, and the whole assembly is easily dismantled. (E. James and Co., 24, Regent Street, Piccadilly, London, W.1.)

A useful route-card holder sold by the Ashgate Garage and Engineering Company, Ashgate Lane, Glossop Road, Sheffield.

A spare bulb case sold by the English Electric and Siemens Supplies, Ltd., Brook House, 191, Tottenham Court Road, London, W.1. The case is suitable for any type of bulb provided with small bayonet caps.

The neatly-made "Celerio" pedal for converting the clutch of Sturmey-Archer gear boxes to both foot and hand control. It is sold by Brown Bros., Ltd., Great Eastern Street, London, E.C.2.

The Victor tyre pick, a handy little tool for digging flints out of outer covers. Sold by the Victor Tyre Co., Ltd., New Malden, Surrey.

Shock Absorber for Cycle Cars.

LIGHT cycle cars present difficult suspension problems, and auxiliary shock absorbers on simple lines are certain to command the interest of owners. The M.P. device—shown in de-

The M.P. shock absorber.

tail: (below) dismantled, (above) in position, and (inset) sectionally—has been designed specially for the front axle of the G.N. by Murden, Page, and Co., 2, Halkin Place, Belgrave Square, London, S.W.1. It is meeting with considerable success.

Compression Tap Design.

EXTREME simplicity is the chief point of the M.P. compression tap, which consists of the usual plug and cup, the valve being a vertical screw, grooved for a portion of its length. When this

A simple design of compression tap.

is screwed right down, the tap is sealed. Two models are shown. (Murden, Page, and Co., 2, Halkin Place, Belgrave Square, London, S.W.1.)

LETTERS TO THE EDITOR

The Editor does not hold himself responsible for the opinions of his correspondents.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

POUNDS, SHILLINGS, AND PENCE PREFERRED.

Sir,—Walking through Manchester last week I heard a curious conversation between two youths who were evidently bent on buying a motor cycle. In the window of a depot several motor cycles were displayed and marked in guineas. One of these youths turned to the other and said, "Let us see, how much is that?" meaning, I suppose, how many pounds, shillings, and pence. How idiotic this system of marking in guineas seems.

E. S. D.

Blackpool.

VENUE FOR THE 1922 T.T. RACES.

Sir,—I notice, with much surprise, that "Ixion," in his "Comments," urges a new T.T. course, where 500 c.c. mounts can indulge in unfettered speed.

Why not Brooklands? The T.T. is not merely to find the maximum speed of a machine, but also to test it. What better course than the Manx for such a purpose? This year a 2½ h.p. machine won because of the phenomenal acceleration: compact, low frame, excellent brakes and steering qualities. Next year much more attention will be paid to these features in Senior and Junior races alike.

Isle of Man.

BALLA-HAIR-NECK.

MILESTONES IN THE "SCOTTISH."

Sir,—I should be extremely grateful if you would allow me, through the medium of your columns, to thank Messrs. Alexander and Co. for the valuable assistance which they rendered myself and other competitors in this year's Scottish Six Days Trial, by placing "milestones" all over the course.

I admit the arrowing of the course was splendid, but it was a very cheering sight to see every few miles an imitation milestone, informing us how far we had to travel to a check, and sometimes valuable hints on observed hills, etc.

Edinburgh.

ONE OF THE COMPETITORS.

POLICEMAN AND SPORTSMAN.

Sir,—Whilst touring with a sidecar last week, in Devon, it was my fortune to come across a really good-hearted policeman. The valve rubber on my back wheel had split, when this gentleman of the Devon Constabulary came along on a bicycle and at once took the valve out of his own machine for me, offering to walk to the next village (one and a half miles) to replace his own. Luckily help came from another source, and I was able to give it back to him. In addition to this he was quite anxious to pump my tyre up, notwithstanding a temperature of something like 85° in the shade. I thought it was a really good turn, and worthy of note, hence this letter.

Saffron Walden.

CE 5254.

AIR-COOLING AND OIL-COOLING.

Sir,—Anent your readers' comments on air-cooling, they all seem to forget that a petrol engine's best running temperature is not stone cold, but rather in the region of 100° C. It would follow that, if air-cooling is "too hot," water-cooling is "too cold." I am waiting impatiently for the wholly oil-cooled engine.

Regarding the present cylinder, if the fins were produced so that the outside shape became streamlined, the air at the rear of the cylinder would cease to be static, and would assist to cool that part.

In some rotary aero engines an Γ shaped aluminium obturator ring is fitted to the extreme top of the piston to

BS

assist in taking up distortion caused by uneven cooling. Such a ring would be quite simple to fit to any piston, and would at least do a little towards retaining compression in our too easily distorted cylinders.

C.C.C.

London, E.16.

Sir,—In Mr. Bradshaw's interesting article on oil-cooling he says: "The cylinder head for the time being must be cooled in the usual manner." Would it not be possible to have the valves in the head driven by an overhead camshaft and circulate the oil over the head, thus cooling the head and lubricating the valve gear at the same time? W.H.A.

Holt.

ANOTHER DISABLED RIDER'S DIFFICULTY.

Sir,—I am a disabled rider ("crocked" left leg), and possess a 1921 standard 2½ h.p. Lewis. I can paddle this machine away quite easily (when warm) with my right leg, and in every way manage it quite satisfactorily; but I am sorry to say I have had a left-hand side-slip, in which my crocked leg came off rather badly.

As you may imagine, I can ill afford to injure this member further, and wondered if any of your readers could tell me of a stout leg shield which would enclose this leg up to the knee, and to a certain extent protect it in case of a similar accident. I presume I should also require strong adjustable footboards instead of the standard footrests now fitted; in fact, I should prefer them.

Liverpool.

DISLIP.

Sir,—May I tender my thanks to the many correspondents who so kindly gave their encouragement and experiences, in answer to my enquiry re a suitable sidecar outfit for a disabled rider, in a recent issue?

I may say that it has helped me to a decision, and I hope to be on the road again before the end of the present month.

1914-1919.

Walthamstow, E.17.

H. R. Davies—the winner of the Senior T.T. race—mounted on a 16 h.p. Anzani-engined pacing machine, which, however, it is extremely doubtful would equal the speeds of the little 2½ h.p. A.J.S.—at least on the Isle of Man course.

OPEN SPEED TRIALS AS A CURE FOR INSOMNIA!

Sir,—I took the opportunity of going over to the open speed trials at Clipstone on the 23rd ult.

The start was at 1.30 p.m., and at five o'clock twelve classes had been run off. Up to this time some half-a-dozen or so riders had been racing in almost every event. Then came the solo machines, events Nos. 9 to 24. Up to this point there had been no solo event in spite of the fact that the solo competitors were there from 1.30 until five o'clock and 135 riders had been on the course.

By running the events in this way the organisers did their best, in my opinion, to kill the interest in the trials.

It was one wearisome stream of sidecars, the same people going up and down. A much better idea, it seems to me, and one which would sustain the interest more, would be to run a few sidecar events, and then a few solo events, interspersing them, so as to make the events more varied, and, at the same time, it would give men who had travelled a long distance with their machines some opportunity of racing, instead of hanging about for hours before they were called upon to take any part whatever in the trials.

For an event such as this I would suggest that:

- (a) The men should get away quicker at the start.
- (b) To save time in coming back, they should get back to the start on a circuitous road.
- (c) Some accommodation should be made for spectators on an advantageous spot, by the way of seats, or a small stand, and that opposite should be recorded the winners of the various classes as they take place.
- (d) That refreshments should be provided, even if not of a high-class character.

(e) There should be a definite starting time for each event or class, so that people who have come long distances may know what time they should be there and get away.

At 5.30 p.m. on Saturday last some riders, who had travelled a considerable distance at considerable expense to themselves and their firms, had taken part in one event only, although they had entered for half-a-dozen events, and, owing to the time of waiting, had to take their departure in spite of the fact that they had incurred heavy expenses both in travelling and entry fees without taking part in other events.

As stated above, these trials started at 1.30, and at 5.30 approximately 136 competitors had covered the course, and there were still about 380 to go up, so heaven only knows what time they finished. [Some weary pressmen left at 9.40 p.m.—Ed.]

I think that these events, if well handled, are splendid sporting competitions, calculated to stimulate and encourage motor cyclists, but if handled in the apparently loose manner in which this event was handled on the 23rd ult. they become most wearisome. It surely should have been a matter for easy calculation for the organisers of these trials to know that 500 competitors would take a certain length of time to go up, and they should have limited the number of classes or entries.

I write this letter with the best of feelings, and with the best interest of the sport in mind, and the few suggestions I have made, if adopted and carried out in a thorough manner, would make such trials as these an exceedingly interesting, instructive, and pleasurable afternoon's sport.

NORMAN T. DOWNS, Managing Director,
NEW IMPERIAL CYCLES, LTD.

TWENTY-THREE YEARS AGO.

Sir,—The accompanying photograph was taken in the spring of 1898—twenty-three years ago. The machine was one of a first batch of three Werner motocyclettes imported into England, and consisted of an ordinary type of pedal cycle with stiffened frame and front forks. The motor was a single-cylinder air-cooled with tube ignition, and designated as $\frac{3}{4}$ h.p. It was attached by clips to the crown of the front forks and to the stem of the handle-bars, moving with the latter.

Carburettor and tank for petrol were in one, and consisted of the small circular tank attached to the top tube of the frame. The carburettor was known as the "surface type," the inside being a plain cylinder with a horizontal diaphragm to prevent the petrol splashing about, through which were fixed several pieces of coarse fabric, one end of each being in the petrol and the other ends protruding into the upper portion of the tank. By capillary attraction the petrol saturated the upper portions of the fabric, and the main air intake was so arranged that the air drawn into the engine passed through this, licking up a certain amount of petrol

vapour in its passage, and thus provided a carburetted mixture. There was, in addition, an independent air supply controlled by a lever on the handle-bars.

At its best, and on the level, the machine was capable of about 16 m.p.h., but had to be assisted by the pedals up even the slightest gradient.

The tube ignition was a constant source of trouble, owing to the wind either blowing the burner out or directing the flame away from the tube, and one got quite used to covering the burner case with one's cap to keep the tube hot.

I rode the machine several hundreds of miles, including one run from London to Brighton and back (which took me three days), pedalling for more than half the distance.

One outstanding feature, I remember, was the good balance of the machine, which enabled it to be ridden with the greatest of ease without using the handles.

A relic of long ago, when motor cycles and the fraternity of motor cyclists were young. Mr. Percy Richardson on his 1898 Werner.

The ultimate fate of this motor bicycle was that it became a martyr to the cause of the present motor 'bus services' in London, as on its last day of this life it skidded under a horse 'bus, taking me with it, and, as usual in those days, burst into flames. As it was found impossible to get it out from under the 'bus, the passengers and horses were taken off, and the bicycle and 'bus just hurt themselves merrily out.

PERCY RICHARDSON.

WHERE ARE THE SPRING FRAMES?

Sir,—Referring to the remark of "Old Timer" (in your issue of July 7th) about the considerable scarcity of spring frame motor cycles on the road, I think that the following are the main reasons why the average motor cyclists do not ride spring frame machines:

- (1.) Greater cost of these machines.
- (2.) Extra weight is not negligible, especially in the case of medium or lightweights.
- (3.) The doubt that the rear spring fork may present failings during its use, i.e., deficiency of lateral rigidity, rapid wear of parts, and inconstant tension of the drive.

Therefore super-saddles and larger size tyres are generally used. This is actually a solution of compromise, not theoretically and mechanically sound, whereas a really correct design must be produced, eliminating any inconvenience. This is not impossible.

As a rider having hard experience of the worst roads of this country, I wish that the motor cycle, well sprung fore and aft, may receive hereafter greater care by makers and lesser diffidence from the public.

ABROAD.

Bologna, Italy.

Sir,—Your correspondent "Old Timer" asks for riders' opinions and reasons as to why they do not ride spring frames. My opinion (that of an "Old Timer" also) is not formed so much from personal use of spring frames as from very close observation of men who have been riding with me on such machines, and I may say at once that I have not been inspired with confidence. The inherent whippiness or elasticity of the spring frame is least noticeable to the observer, and is felt least by the rider when used with a sidecar combination, and I must say that my experience of the 1920 spring frame Matchless was, on the whole, satisfactory. Beyond rolling a bit at speeds, it was very comfortable, and after some considerable mileage there was no apparent wear. But for solo use the spring frame is a different matter, for in most instances it seems to cause unsteady steering, in some instances it creates bouncing, and sometimes I have noticed the two faults occurring simultaneously. Where roads are furrowed with longitudinal ruts, as so many are in these days, the rigid frame scores every time. I have ridden the Bat type of spring frame solo, and was obliged to lock the spring and use it solid. The only spring frame which appears to me from its behaviour on the road to have its rear springing acting in entire unison with the front springing is the A.B.C., but opinions of riders vary very considerably as to the merits and demerits of this spring frame. As a veteran rider I look forward to the ideal springing, but so far it does not seem to have matured, and so long as I am able to do 200 miles comfortably in the day on my Triumph fitted with a Brooks B170 saddle with light springs to suit my weight, I am not worrying about spring frames.

London.

ENTENTE.

LED HORSES ON THE ROAD.

Sir,—May I venture, as a very old cyclist, to seek the publicity of your columns in an endeavour to put an end to one of the gravest dangers on our roads, viz., the led horse on its off side. This danger is increased tenfold after dark, as the law still allows a horse to be ridden or led without showing a light at all. Serious accidents continue to happen week after week, and yet this absurd old law is allowed to hold good.

The remedy is simple. Every horse should be led by the off side of its head, so that it may take its proper place in the traffic, and every horse, whether led or ridden, ought to carry regulation lights.

CONVALESCENT.

Cockermouth.

ROAD CONDITIONS IN SCOTLAND.

Sir,—May I ask some space in your columns for a gentle counter-attack on your Scottish Six Days representative?

As a Scot, his opening paragraph has stung me to the quick.

I spent all last winter in London, and frequently had occasion to traverse the Uxbridge and Barnet roads. The Falkirk-Stirling road, notoriously the worst in the Lowlands, is a very poor second to the former, and the latter had potholes which could nearly accommodate the whole of Stirling. Memories of Croydon, too, still keep me awake at nights. 75% of my kinks in my long-suffering rims came from that favoured clime, and although a rider of several years' experience, I had more falls in that five months than I have had in the rest of my life.

Such surfaces may not be tolerated in remote parts of England, but appear to be accepted without comment round the Metropolis.

Please do not designate me a mad Scotsman trying to prove black white. I admit the blackness where alleged, but desire to point out that it may be found South as well as North of the Tweed.

Edinburgh.

A.H.S.

Sir,—Your otherwise excellent report of the Scottish Six Days Trials was, in my opinion, marred by an unjustified attack upon the present condition of the roads in the northern kingdom. To designate the average road in Scotland as appalling and impliedly dangerous, is to propound an unwarrantable proposition which is calculated to create an erroneous impression in the minds of your English readers, and might deter many from experiencing the joys of touring in Scotland.

Evidently your trials reporter has been too prone to generalise from the condition of particular districts which lie, as, for instance, Jeantown and Glendarnel, far from

the beaten track. In such districts, apart from trials, motor traffic is few and far between.

It must be borne in mind that the policy of the organising club has always been to lay the six days' route over mountainous, and consequently comparatively uninhabited, parts, and to provide a difficult route which will eliminate the unwary without having to rely on split second methods.

It would be idle, of course, to deny that there are some pretty bad roads in Scotland, but the prolonged drought, and the abnormal road traffic during the recent strike, should be considered before making such a sweeping condemnation.

As it is, the roads in Scotland are already better on the average than they were before the war.

Despite the odium attached to comparisons, I would mention, as a parting shot, Lord Montagu of Beaulieu's recent letter to *The Times*, in which he hails the main approaches to Edinburgh as the finest in the British Isles.

Edinburgh.

WRATHFUL SCOT.

SUMMARY OF CORRESPONDENCE.

Several enlogistic letters upon the running of various machines have reached us this week. No fewer than three Matchless owners endorse the previous letter of "Satisfied," and in each case give instances of long journeys covered at a high average speed without discomfort. Two lightweight owners, of a 1915 2½ h.p. Ivy and a Velocette respectively, also claim exceptionally satisfactory performances for their mounts, the Velocette rider, incidentally, asking if the term "baby" as applied to small capacity two-strokes is not somewhat of a misnomer.

"FH 1926" recommends "Punkho" as a satisfactory puncture-preventing medium.

Signing himself "Badly Treated," a reader complains of lack of attention to a small spares order by the London depot of a well-known firm.

If the motor cyclist who received assistance from a G.N. at Ferrybridge on the 12th or 13th ult. will communicate with the D.R. Engineering Co., Ltd., Hospital Hill, Dunfermline, he will receive the inflator which was left in the car.

Letters on the subject of mounts suitable for disabled drivers continue to reach us. Mr. F. O. Edney, a disabled (left leg) rider of a 4½ h.p. Humber sidecar, thinks that "many disabled men would take up the sport if they knew how easily modern machines are handled." "H.V.H.," a one-armed rider, expresses great satisfaction with his Levis.

Over the signature of "Public School Boy," a correspondent states the case for the formation of a Public Schools M.C.C. exclusively for boys still at school.

The Autocraft Board appeals to motor cyclists to give greater attention to correct compliance with registration and driving licence regulations. Police raids in main roads around London recently have revealed an extraordinary number of cases of carelessness in this respect.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cyclist*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view. Price net 3/- By post, 3/3.

"MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cyclist*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/3.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILIFFE & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

KICK STARTING.

Q When using the kick-start of my 2½ h.p. J.A.P.-engined lightweight, I find great trouble in dropping the exhaust valve at the right moment, and the result is a nasty kick back. Could you tell me the cause and remedy for this?—A.E.R.

Probably the ignition is slightly too far advanced. You should also drop the exhaust valve just before the kick-starter pedal reaches the end of its travel.

LIGHT SIDECAR WORK.

Q Could you tell me if a sidecar weighing 90 lb. is too heavy for a 2½ h.p. two-stroke used in the Midlands?—H.G.

Provided no severe hill-climbing is attempted, and that the load carried is not excessive, you should obtain reasonable satisfaction from your machine if the sidecar fitted does not exceed 90 lb. in weight. This is assuming, of course, that the machine is a two-speed model.

RIGHT IN STOLEN MACHINE.

Q Nearly twelve months ago we purchased a second-hand motor cycle, and sold it soon afterwards. It has recently come to our knowledge, through the police, that the machine was a stolen one, and it had to be given up to the owner, the result to us being that our customer claims the return of the full amount he paid for it. We have learnt that our customer, after having had the machine some months, sold it for less than he gave us for it. What we wish to know is to what extent we are legally responsible to our customer—whether for the amount he paid or for the amount he resold it. Having bought the machine when trade was good, after using it for some time, and reselling it when trade was quiet, should the loss of the difference be borne by our customer or not?—M.N.

If the machine were a stolen one, the right in it remains with the person from whom it was originally taken; therefore, the person who bought it from you might demand that the money he paid be returned to him, also you might make the same demand from the person who sold you the machine, and so on. The question of the fall in value of the machine need not concern you at all, since legally, if the machine were stolen, neither the person who bought it from you, nor you yourselves, have any right to it.

CONVERTING ACETYLENE LAMPS TO ELECTRIC.

Q (1.) What voltage and amperage or candle power of bulbs shall I require for a moderately powerful head lamp, a small sidecar lamp, and a tail lamp (preferably flash lamp type of bulbs for the two latter)? (2.) What voltage and amperage of accumulator shall I require, how long will it last on a charge, and will an unspillable one do? (3.) Can I obtain clips to fasten the bulbs to the existing gas burners? (4.) Do you consider accumulator electric lighting satisfactory?—E.K.

(1.) Four volt bulbs should be sufficient if you do not require an extremely powerful light. Use a four volt two amp. in the head lamp, and four volt half amp. in side and tail lamps. (2.) A four volt forty amp. (ignition) accumulator will run these about six hours. (3.) Most manufacturers of electric lighting accessories supply conversion sets for acetylene lamps. (4.) Accumulator lighting is perfectly satisfactory, providing you keep the batteries well charged; even if the lights are not used the batteries should be charged every six weeks.

ADAPTING A CINEMA DYNAMO.

Q (1.) I have a small dynamo or generator—I am not sufficiently versed in electricity to know the difference—off a small bioscope.

It was geared off the pulley worked from the film wheel (by hand), and I want to know if I could run it off the flywheel of my 4 h.p. Douglas to supply electric light. The voltage is about six. (2.) Should I have to run accumulators? The pulley on the dynamo (?) is of the "slipping variety."—A.J.W.

(1.) The terms "dynamo" and "generator" are synonymous. You might be able to use the dynamo for motor cycle lighting, but it is doubtful whether it will stand up to the variations to which a motor cycle lighting generator is subjected. (2.) As you do not state whether the current generated is continuous or alternating, we do not know whether you can use it in conjunction with accumulators or not. Presumably the slipping pulley is to prevent the dynamo being driven above the speed required for its normal output; but on a motor cycle the device might not work satisfactorily for any length of time.

Taking left-hand bends at speed. S. King (4½ Humber sidecar) making a spectacular climb of Northend Hill, near Nightcote, in the recent Humber trial.

KNOCK IN A NEARLY NEW ENGINE.

A 1920 $2\frac{1}{2}$ h.p. two-stroke engine which was delivered two months ago, lately developed an amazing knock when climbing hills, and I have to change gear on the slightest gradient. I think it unlikely any part of the engine is worn as the machine is almost new.—K.L.S.

From the details you supply it is impossible to state definitely the cause of the knock which has developed, but it may be due to excessive carbon deposit, or to one of the piston rings becoming burnt in its groove. It would be as well to remove the cylinder in order to look into these matters and also to find out if the big end has slackened. If this, or any other, mechanical defect has arisen, it would be well to return the machine to the makers for attention.

SPARKING AT CONTACT BREAKER.

A new motor cycle, fitted with Villiers flywheel magneto, which I bought in June has given trouble since I took delivery. I find that when the engine is running a spark (more or less continuous) occurs between the platinum points. Naturally, the points soon burn, and have to be refaced. When refitting new points, I made the gap of points $\frac{1}{16}$ in., and gap of plug electrodes $\frac{1}{16}$ in. This cured sparking at magneto points for the time being, but a spark again appeared at the platinum points.—D.P.E.

The trouble is apparently due to defective action of the condenser; it is probably short-circuited either internally or externally. Such symptoms are not usual with this magneto, which normally is particularly free from contact breaker sparking. A new condenser may be fitted quite easily, as it is a detachable component. The contact points of any magneto in good order should not require renewal until the machine has completed at least 10,000 miles.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," 19, Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"W.J.S." (Deptford, S.E.)—Auto-wheel fitted into an ordinary cycle frame.

"A.K.G." (Blundellsands).—Scott Sociable. Reliability, comfort, starting, consumption, and ease of handling.

"A.F.J." (Lee, S.E.)—Sports Sunbeam. Maximum speed, hill-climbing and general reliability.

"G.F." (Rotherham).—Degory carburettor on Scott. Consumption and flexibility.

"C.B." (Warrington).—Grado gear on early model Triumph; also most suitable belt for Rudge-Multi.

"G.P." (Charlwood).—A.V. monocar. Steering, ease of chain and gear adjustment, reliability.

"G.H.G." (Manilla).—Indian Scout. Particulars required of the electrically equipped model, and data as regards running and performance generally.

Important Dates.

Mon., Aug. 1st, to Sat., Aug. 6th—International Six Days Trial in Switzerland.

Sat., Aug. 6th—B.M.C.R.C. Open Brooklan's Meeting.

Sat., Aug. 6th—North Wales M.C.C. Open Reliability Trial.

Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.

Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.

Thurs., Sept. 8th—Norfolk M.C.C. and L.C.C. Open Speed Trials.

Sat., Sept. 10th—North-Western Centre A.C.U. Open Speed Trials.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Sat., Sept. 24th—M.C.C.C. Sporting Trial.

Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

RECOMMENDED ROUTES.

MELTON MOWBRAY TO ILFRACOMBE.—W.H.T.

Melton Mowbray, Syston, Leicester, Lutterworth, Rugby, Blue Boar Corner, Bubbenthal, Leamington, Warwick, Stratford-on-Avon, Bidford, Abbots Salford, Harvington, Evesham, Bengeworth Bridge, (edge of) Sedgeberrow, (edge of) Beckford, Ashchurch, Tewkesbury, Gloucester, Bristol, Sidcot, Axbridge, Cheddar, Highbridge, Pawlett, Bridgwater, Cannington, Nether Stowey, Williton, Watchet, Washford, Carhampton, Dunster, Minehead, Porlock, Lynmouth, Lynton, Parracombe, Blackmore Gate, Combe Martin, Ilfracombe. Approximately 242 miles.

WOOD GREEN TO WORCESTER.—W.K.

Wood Green, Barnet, St. Albans, St. Michael's Church, Leverstock Green, Boxmoor Church, Berkhamsted, Northchurch, Tring, Aston Clinton, Aylesbury, Hartwell, Stone, Thame, Wheatley, Oxford, Woodstock, (edge of) Enstone, Chipping Norton, (edge of) Little Compton, Moreton-in-Marsh, Bourton-on-the-Hill, Blockley, Broad Campden, Chipping Campden, Weston-sub-Edge, Wilersey, Broadway, Evesham, Pershore, Defford, Baughinton, Upton-on-Severn, Hanley Castle, Great Malvern, Powick, Worcester. Approximately 136½ miles.

PECKHAM TO BRISTOL.—J.G.

Peckham, Camberwell, New Road, Kennington Oval, Harleyford Road, Upper Kennington Lane, Vauxhall Bridge Road, Victoria, Grosvenor Gardens, Grosvenor Place, Hyde Park Corner, Knightsbridge, Kensington High Street, Kensington Road, Hammersmith Road, Chiswick High Road, Kew Bridge Station, Brentford, Hounslow, Colnbrook, Slough, Maidenhead, Littlewick, Twyford, Reading, Teale, Newbury, Hungerford, Marlborough, Beckhampton, Calne, Chippenham, Pickwick, Box, Bath, Keynsham, Bristol. Approximately 123 miles.

Helping the Petrol.

There are still riders who believe in the possibility of increasing the power obtainable from petrol; for instance, we learn that L. Mitchell, the Norton rider, who was first in the 600 c.c. four miles race, second in the 600 c.c. twenty miles race, and third in the twenty miles 1,000 c.c. event at the recent Saltburn speed trials, used Spots in his petrol.

In the Air.

British magnetos were primarily developed for aircraft work, and have performed with unfailing success in the upper elements as well as on sea and land. The record of success is being continued, for the first three places in last month's Aerial Derby were gained by machines equipped with B.T.H. magnetos. In the same race, in both 1919 and 1920, these magnetos were used on the first and second machines.

In the Scottish Trials.

As a rider substituted at the last moment in the Scottish Six Days Trials, A. Symes piloted one of the Martinsyde sidecar outfits with success, being awarded a gold medal. Unfortunately Symes's name was announced as E. Simms, and so appeared in our report.

A Belated Amendment.

The award of the Sangster Cup in the Birmingham M.C.C.'s reliability trial at Whitsuntide has been changed from F. Short (5-6 James sc.) to F. W. Giles (A.J.S. sc.), in consequence of a re-checking of the results.

Front Forks and Brakes.

The makers of the now well known Webb internal-expanding front brake have acquired the sole licence to manufacture the Maplestone spring fork. Such an amalgamation of interests will be beneficial to users of both components, as the forks will be specially made to suit the application of the Webb brake.

Price Reductions.

In consequence of the anticipated reduction in wages and lower costs of raw material, Chater-Lea, Ltd., have made reductions as follows:—Lightweight model, with Chater-Lea engine and two-speed gear box, from £70 to £63; lightweight model, with Villiers Mark III engine and Chater-Lea two-speed gear box, from £65 to £58; while the price of motor cycle and cycle car components have been reduced by 15%.

The price of the 8 h.p. Royal Rubsidecar outfit, with patent adjustable spring frame, and equipped with Easton windscreen, spare wheel, and complete tool kit, has likewise been reduced to £185; while that of the 3 h.p. spring frame solo machine, with three-speed gear, clutch, and kick-starter, has been reduced to 95 guineas.

Faded Licences.

Licences that have become illegible owing to exposure to the sun, but through no fault of the licence holder, will in future be replaced free of charge. Should the fault be due to a defective holder, however, the usual fee of 5s. will be charged. Licensees are warned by the Ministry of Transport that faded cards should on no account be "touched up."

The A.A. and M.U. Annual General Meeting.

An improved road service and a great increase in the membership. These were two chief points of Sir W. Joynton-Hicks's speech at the general meeting of the Automobile Association and Motor Union held at the Savoy Hotel, London, on Wednesday, July 27th.

Signposting of roads had now been taken over by the Ministry of Transport. It was the duty of the Association, however, to see that the existing high standard of signs was maintained. The work of the route section had been greatly increased, and they were now supplying motorists with over 91,000 routes per annum. A balance sheet showing the sum of over

INTERNATIONAL SIX DAYS TRIAL.
PASSENGER MACHINE TOPICS.

£99,529 carried to the reserve funds was presented by Mr. Charles McWhirter, who pointed out the excellent financial position in which the Association now stood.

Important Trial in Cumberland.

Established last year as an event of importance, the second annual open reliability trial of the Cumberland County M.C.C. will be held on Saturday, the 13th inst. The award list includes the Alan trophy (value sixty-five guineas) and three other silver cups. Mr. J. J. A. Dias, 24, Bank Street, Carlisle, is trials secretary.

British Power Alcohol.

Finance Bill amendments include a new clause dealing with power alcohol, which increases the existing allowance of 3d. per proof gallon on British distilled power alcohol to 5d., and removes the net surcharge of 2d. per gallon on power alcohol imported from British Colonies. This means that Empire-produced power alcohol is now not only free from duty, but has a preference amounting to more than 2s. a gallon over foreign spirit.

Phonetic Engines!

Phonetic spelling would undoubtedly be useful on occasion. The peculiar name in this paragraph heading appears in the advertisement columns of a daily paper, and we assume it refers to Peugeot.

Rally of Bradbury Riders.

It is proposed to hold a rally of Bradbury riders during August, at some popular rendezvous near London. Mr. Austin F. Godwin, The Homestead, Belmont Road, Twickenham, London, will be pleased to hear from riders who would like to take part in it.

Well-supported North Wales Trial.

At the time of going to press nearly 120 entries had been received for next Saturday's open trial of the North Wales M.C.C., but it is expected that there will be about 130 starters. There are twenty teams, including one of three Powell machines. The start and finish will be at Denbigh, and the route, of approximately 50 miles, will include some of the most beautiful scenery in North Wales.

The start of the 350 c.c. class in the Grand Prix race. Paul Meunier, riding a twin-cylinder Alcyon (No. 37), the winner of this class, covered the distance of 193.07 miles in 3h. 55m. (49.4 m.p.h.).

In the U.S.A.

In America, it is said, the unemployed are using their private cars to earn themselves a living. We understand that this class of motorist no longer employs a chauffeur!

Disregarded Limit in Lincolnshire.

Complaints have been received by the Lincolnshire police of riders passing through the ten-mile limit in the village of Colsterworth, on the Great North Road, midway between Grantham and Stamford, at an excessive speed. The Chief Constable, in corresponding with the A.C.U. on the matter, gives the assurance that he is very undesirous of establishing anything in the nature of a police trap, but that unless the limit at Colsterworth is observed he will be compelled to take action in the matter.

Police Activity in Essex.

On Sunday evenings a police trap is usually being "worked" in Ingateson on the London-Colchester road, six miles west of Chelmsford.

Yet another trap is reported in the same county. This is in the High Road, Woodford Wells, where motor cyclists are stopped to find out if their machines are properly equipped as regards brakes, etc.

Belgian Grand Prix Race.

The most important speed event in Belgium this year is the Grand Prix, organised by the Belgian Motor Cyclists' Federation. Twenty-one entries have been received, of whom the following are of British nationality: G. W. Walker (Norton), H. Le Vack Indian), and F. W. Dixon (Indian). British machines are

represented by the Rudge, Triumph, James, B.S.A., and Sun makes. The race takes place on a course near Malmédy in the beautiful Ardennes district on August 12th.

Handbook of the F.I.C.M.

There has just been published the annual handbook (1921) of the *Fédération Internationale des Clubs Motocyclistes*. It contains much useful information as to the aims and scope of the Federation, and also its general and international competition rules, which have already been dealt with at some length in *The Motor Cycle*. Appended there is a complete table of world's records as approved at the Brussels conference of the Federation in January. The handbook, price 2s. 6d., may be obtained from the general secretary, F.I.C.M., 83, Pall Mall, London, S.W.1.

EFFECT OF RACING SPEEDS ON ROAD SURFACES.

The top illustration shows the state of the road during the motor cycle Grand Prix race. Although bad in certain places, it was not to be compared with the course during the car race which took place the next day. As competitors passed along the cut-up surface, showers of stones were flung in all directions. The lower illustration conveys a good idea of what the 100 m.p.h. car drivers had to contend with. (Copyright photograph from *The Autocar*.)

THE MOTOR CYCLE IN HIGH ALTITUDES.

International Six Days Trial in the Swiss Alps. Climbs of 8,000 feet.

ON Monday morning last there started one of the most interesting and instructive reliability trials which has ever been held, namely, the International Six Days event, organised by the Swiss Motor Cycle Union for the International Federation of Motor Cycle Clubs. Entries are composed of private individuals, and international teams competing for the trophy presented by the British Manufacturers' Union, and individual trade entries from Great Britain, France, and Switzerland.

Representative British Entry.

Unfortunately, the support for this competition has not been so good as was expected, but the number of entries may be accounted as a fair one, and the British entries, though few in number, are representative.

As far back as 1913, an international team trial was held—on that occasion in England, and in conjunction with the English Six Days Trials. We say *team* trial advisedly, for not until the following year were true international six days trials organised—i.e., trials which

attracted individual entries from various countries as well as teams for the 200 guinea International Trophy.

The 1914 event was to have been held in France, with Grenoble as a centre, but owing to the outbreak of war the event was cancelled. Many of the British competitors had a very exciting time, being stranded in France during the first stirring days of mobilisation. Several had to abandon their machines, which were for ever lost to them.

Therefore, the first trial on this year's lines was held last year, Grenoble again being selected as the starting point.

Summary of Past Results.

In 1913 two teams, English and French, competed for the Trophy in the A.C.U. Six Days in the Lake District. The English team, consisting of W. B. Gibb (2½ Douglas), W. B. Little (3½ Premier), and C. R. Collier (8 Matchless sc.), won easily.

There were four team entries for the cancelled 1914 event: Great Britain, France, Switzerland, and Germany.

Last year's event, on the other hand,

only attracted two international teams, France and Switzerland, and a total of but fifteen starters for the trial. The Swiss team, all on Motosacoches, made the only non-stop performance, and thus secured the Trophy, and, incidentally, the allocation of venue and routes for the following year's (1921) event, which is now taking place.

In the course of this year's competition the whole of that part of Switzerland which is open to motor traffic will be covered, and the principal mountain passes will be surmounted.

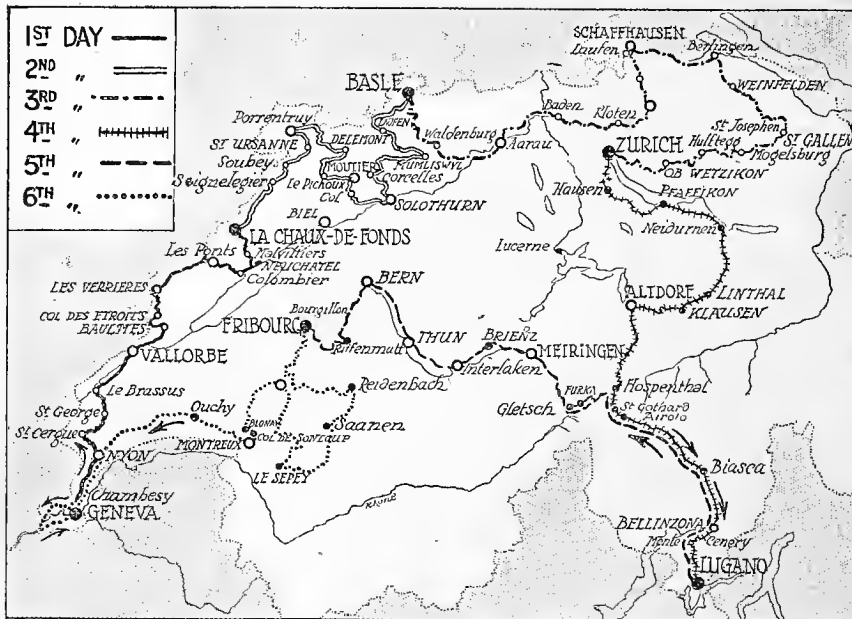

The First Stage.

The first day's run is from the starting point at Geneva to Chaux-de-Fonds. The first hill-climb is some fourteen miles from the start, and rises to a height of 3,500 feet, giving an excellent view of the Alps and looking right into France, where Mont Blanc can be clearly seen if the weather is fine. A little farther on another climb is encountered, where the gradient reaches 1 in 6½ and an altitude of 4,950 feet is reached. The road then descends to the luncheon stop,

A STUDY IN HAIRPIN BENDS.

A scene on the fifth day of the International Six Days Trial, which started on Monday, August 1st. On the right the route traverses the Furka Pass (7,500 ft.), descending by degrees in order to cross the Rhone at Gletsch (4,300 ft.); it immediately rises over the Grimsel Pass (6,900 ft.) by a series of hairpins. In the centre of the picture is seen the Rhone glacier.

The course of the International Six Days Trials, which encircles almost the whole of Switzerland. The total distance is 1,081½ miles.

Vallorbe, after which other passes of the Jura are traversed over heights from which excellent views can be obtained, extending from the French frontier to the Austrian Tyrol. The total journey is 76 miles, and terminates at the most famous watch-making city in the world.

The Second Day's Run.

The next day's run from Chaux-de-Fonds to Basle marks the entry into the German-speaking part of Switzerland, but again includes beautiful scenery, and, of course, necessitates the climbing of more of the Jura passes.

Basle to Zurich.

The third day's run from Basle to Zurich runs along the Rhine, traversing more of the Jura country with the usual ascents and descents, and finishes the first stage at Laufen, close to Schaffhausen, where are the famous falls of the Rhine, and though the road is undulating there are apparently no serious ascents until the end of the journey, at Zurich, is reached.

Over 8,000 Feet High.

We now come to the fourth stage, Zurich to Lugano, quite the most interesting day's run, involving a climb to 6,440 feet over the Klausen Pass, the road rising about 5,000 feet in fourteen miles, followed shortly afterwards by an even higher climb to nearly 7,000 feet, with a descent to 700 feet above sea level in forty miles to Lugano.

On the fifth stage of the trial, 8,030 feet is reached (Col de la Furka) by the wonderful serpentine road illustrated on the preceding page. Continental engineers, however, differ from the road makers of this country, inasmuch that the hairpins are made level—the easiest instead of the most difficult portions of the hills. Here the competitors will see the Glacier du Rhône and a view which alone is well worth the journey.

c6

SOME OF THE GRADIENTS TO BE ENCOUNTERED.

First part of the first day's journey.

Second part of the first day's run.

Some of the peaks in the second day's run.

A series of climbs in the afternoon of the second day.

A remarkable contour of the fourth morning's route.

In the afternoon of the fourth day the famous St. Gothard Pass is climbed.

The contour of the last day's route suggests some difficult steeplechasing, and at two points the height of 5,000 feet is reached, while in one section the competitors will descend from 3,820 feet to 1,240 feet in five miles, to the shore of Lake Geneva, with a comparatively level run to the finish at Geneva.

The second part of the last day's journey.

Below we give a list of the machines entered in the different categories, from which it will be seen that many well-known British competitors are riding, while quite a number of British motor cycles are in the trial in the hands of Continental riders.

The British team competing for the Manufacturers' Trophy is composed of Leslie Guy (3½ Scott), Hugh Gibson (5-6 Raleigh sc.), and J. A. Newman (3½ Sunbeam).

RACING AT BROOKLANDS.

H. R. Davies on his 2½ h.p. A.J.S. beats the Five Mile Record at the Fourth B.M.C.R.C. Members' Meeting, Averaging 74½ m.p.h. Good Speeds by 250 c.c. Lightweights.

S. M. Greening (Francis-Barnett), who won the lap scratch race for solo machines not exceeding 280 c.c. at a speed of 56.5 m.p.h.

R. N. Stewart, winner of the handicap for machines between 350 and 1,000 c.c. on a Trump-Jap, averaging 58.73 m.p.h.

ANOTHER laurel has been added to the wreath of victories now standing to the credit of the 349 c.c. A.J.S.

H. R. Davies, in the three lap scratch race at the B.M.C.R.C. members' meeting at Brooklands on Wednesday last week, raised the speed of the five mile record in Class B to 74.50 m.p.h.—an additional 4.68 m.p.h. over Kaye Don's previous speed; the time for the five miles was 4m. 1.6s. Eight races were run off, the first of which was secured by C. F. Temple (7-9 Harley-Davidson), who again put up a fine speed. The distance was three laps, and limited the starters to 1,000 c.c. The winner's speed was 79.67 m.p.h. F. C. Townshend (8 Zenith) and G. Packman (8 Sunbeam-Jap) finished second and third respectively.

A victory for the Massey-Arran was obtained by Kaye Don in the second race

for 350 c.c. solo machines. His speed was 69.96 m.p.h., while H. R. Davies (2½ A.J.S.) did not give him much rope. Third place fell to Tudor Thompson (2½ Douglas).

Fast Times in Scratch Event.

Victor Horsman on a Norton led the field in the three lap scratch race for 500 c.c. machines, and covered the distance at an average speed of 75.14 m.p.h. C. G. Pullin (3½ Douglas) and F. B. Halford (on a 3½ h.p. Ricardo Triumph) followed in that order.

A large field started in the three lap handicap for machines between 350 c.c. and 1,000 c.c., and, curiously enough, a long handicap man, R. N. Stewart (4 Trump-Jap) romped home at 58.73 m.p.h.

Reyersbach, a newcomer, had bad luck on his Norton, which caught fire *en route*. THREE-LAP SCRATCH RACE (Solo, up to 1,000 c.c.)—1, C. F. Temple (7-9 Harley-David-

son); 2, F. C. Townshend (8 Zenith); 3, G. Packman (8 Sunbeam-Jap). Winner's speed, 79.67 m.p.h.

THREE-LAP HANDICAP (Solo, up to 350 c.c.)—1, Kaye Don (2½ Massey-Arran), 12s. start; 2, H. R. Davies (2½ A.J.S.), scr.; 3, Tudor Thompson (2½ Douglas), 24s. Winner's speed, 69.96 m.p.h.

THREE-LAP SCRATCH RACE (Solo, up to 500 c.c.)—1, V. Horsman (3½ Norton); 2, C. G. Pullin (3½ Douglas); 3, F. B. Halford (3½ Triumph-Ricardo). Winner's speed, 75.14 m.p.h.

THREE-LAP HANDICAP (Solo, between 350 c.c. and 1,000 c.c.)—1, R. N. Stewart (4 Trump-Jap), 3m. 3s. start; 2, E. Remington (4 Blackburne), 27s.; 3, W. L. Gard (3½ Norton), 2m. Winner's speed, 58.73 m.p.h.

THREE-LAP SCRATCH RACE (Solo, up to 350 c.c.)—1, H. R. Davies (2½ A.J.S.); 2, Kaye Don (2½ Massey-Arran); 3, Tudor Thompson (2½ Douglas). Winner's speed, 73.45 m.p.h.

THREE-LAP HANDICAP (Sidecars, up to 1,000 c.c.; cycle cars, up to 1,100 c.c.)—1, W. D. Marchant (8 Zenith sc.); 2, O. de Lissa (8 Motosacoche sc.); 3, R. Dequin (8 Zenith-M.A.G. sc.). Winner's speed, 70.30 m.p.h.

THREE-LAP SCRATCH RACE (Solo, up to 280 c.c.)—1, S. M. Greening (2½ Francis-Barnett-Jap); 2, J. V. Prestwich (2½ Jap); 3, C. Fairweather (2½ Blackburne). Winner's speed, 56.5 m.p.h.

THREE-LAP SCRATCH RACE (Sidecars, up to 1,000 c.c.)—1, H. F. Marchant (8 Zenith sc.); 2, S. E. Longman (7-9 Harley-Davidson sc.); 3, O. de Lissa (8 Motosacoche-M.A.G.). Winner's speed, 69.78 m.p.h.

FLAT TWINS IN THE GRAND PRIX RACE

Naas, the French rider of an A.B.C. (on left), riding neck and neck with F. W. Dixon (Douglas). Naas assumes a fine riding attitude, but fell out between the fourth and sixth laps. Dixon finished fourth in the 500 c.c. class.

A SHORT CUT TO EXPERIENCE.

THE phrase above describes in a nutshell the latest edition of "Hints and Tips for Motor Cyclists" (2s. net, Iliffe and Sons, Ltd., 20, Tudor Street, London, E.C.4.), and it admirably expresses the qualities of this useful handbook of wrinkles, which has now reappeared in its eighth edition.

An extensive revision of the matter has taken place, and it has been thoroughly brought up-to-date, but, in view of the fact that thousands of motor cyclists follow the sport on more or less obsolete machines, references to older models have been by no means entirely deleted.

From the selection and purchase to the final selling of a machine is the field covered in the 400 odd paragraphs, and legal requirements, driving, maintenance, repair, lighting, tyres, accessories, and touring are all touched upon.

A.C.U. SIX DAYS TRIALS.

A Section of Manufacturers Dissatisfied with the Regulations. Fear of Sparse Entry.

SO far about thirty entries have been received for the annual Six Days Trials of the A.C.U., August 29th to September 3rd next. Information from various sources would suggest that manufacturers will not give the trial the support usually accorded this important annual event.

It appears that a large number of prominent manufacturers are dissatisfied with the regulations, and make no secret of the fact. Especially do they object to those points—extraneous to reliability—which depend entirely upon the personal opinion of A.C.U. officials.

Outstanding among these is the proposed marking for silence, which this year will be effected by ear alone. It will be remembered that in previous A.C.U. Trials competitors have objected to the use of the audiometer, and particularly the marks lost under the heading of silence compared to other features considered of far more importance. On the other hand, one regrets that any test of silence would not be popular among a certain section of the trade.

Points Criticised.

The fuel and oil consumption test is deemed unfair to lightweight machines; and, as much as we desire to see every encouragement extended to matters of economy, one is inclined to agree with the view expressed that the A.C.U. Competitions Committee has not fully taken into consideration the conditions under which the competing machines will be running. For example, the 250 c.c. lightweights are expected to average 100 m.p.g. of petrol and 1,800 m.p.g. of oil, and one mark will be deducted for every 2% below these figures.

Fifty marks are credited at the commencement of the trial for each of these tests, and a small two-stroke which may climb every hill, arrive on time at every check, gain full marks on all other counts, but which only gives 89 m.p.g. of petrol, would lose its gold medal. That is but one bone of contention.

Considering the nature of the course—although no freak hills are included, there are over twenty hills with 1 in 7 gradients included.

Oil consumption, too, is regarded as being too ambitious. Again, to quote the 250 c.c. lightweights, 1,800 m.p.g. is probably the oil consumption of the average rider who uses his machine for ordinary pottering about, but to average legal limit over 700 odd miles, including the worst hills in the West of England, in addition to twenty-five laps of Brooklands at speed on less than half a gallon of oil, is regarded as grossly unfair.

Another test which is much criticised by traders interested in this essentially trade trial is the final examination. Marks will be deducted at the discretion of the judges if any vital part of the engine, transmission, or frame be found broken, and if any undue wear or tear is discovered in the steering, valve tappets, cycle parts, controls, and engine bearings.

It is the remark "at the discretion of the judges" which forms the definite

stumbling block, since it may conceivably mean so much when awards are under contemplation. For this the A.C.U. has only itself to blame, for in past events decisions in this connection have been far from fair, and exhibited a desire to dictate design, which, it is claimed, not without reason, is outside the scope of the A.C.U., which is a body to test rather than design machines.

Altogether there are eight separate and distinct tests in the trials.

- (1.) General reliability (running to schedule) (100).
- (2.) Hill-climbing (100).
- (3.) Silence (20).
- (4.) Brakes (25).
- (5.) Fuel consumption (50).
- (6.) Oil consumption (50).
- (7.) Speed at Brooklands (100).
- (8.) Final examination (100).

The number of marks credited at the commencement of the trial is shown in parentheses.

In order to obtain a gold medal a competitor may not lose more than 10% of marks on any one test. Thus, the loss of three marks in the silence test alone is sufficient to place a competitor in the silver medal class; this is considered a hopeless handicap by manufacturers of single-cylinder machines in particular.

A. Bennett and the $3\frac{1}{2}$ h.p. Sunbeam, on which he won the Grand Prix in the record time of 3h. 13m. 24 $\frac{3}{4}$ s. (=59 $\frac{1}{4}$ m.p.h.). This retrieves somewhat his hard luck in the T.T., when he finished fourth.

It is to be regretted that these facts will be the cause of many manufacturers abstaining from entering, as the A.C.U. Six Days Trials of the past have been productive of much good, and have indeed claimed the representative trials entry for many years past.

Itinerary of the Route.

As announced in last week's issue, the A.C.U. Six Days Trial this year will start on Monday, the 29th inst., from Brooklands, and will include five routes in the South and West of England as follows:

FIRST DAY.—Brooklands, Staines, Maidenhead, Oxford, Chipping Norton, Cirencester, Malmesbury, Slaughterford, Colerne (Ditteridge Hill), Bath—138 miles.

SECOND DAY.—Bath, Weston (Weston Lane), Toghill, Dursley, Wickwar, Chipping Sodbury, Keynsham (Darley Hill), Whitchurch, Bishopsworth (Dundry Hill), Chewstoke, Cheddar Gorge, Bridgwater, Spaxton (Collier's Hill), Kingston (Cotthelstone Hill), Cromcombe, Stogumber (Pittsford Hill), Wiveliscombe (Axford Hill), Taunton—155 $\frac{1}{2}$ miles.

THIRD DAY.—Taunton, Wiveliscombe (Whitefield Rocks), Haleigh's Cross, Luccombe (Porlock), Lynmouth (Lynmouth), (Lynton Station Hill), (Parracombe), South Molton (Ash Mill), (Frankhill), Tiverton (Newtes Hill), Honiton (Station Hill), Sidford, Lyme Regis, Morcombelake (Baker's Cross), (Thistle Hill), Axminster (Sector Hill), (Stammery Hill), Marshwood, Broadwindsor, Chard (Coombe Head), Taunton—178 miles.

FOURTH DAY.—Taunton, Blagdon Hill, Wellington Hill (Monument Hill), Dunkeswell, Honiton, Crewkerne, Yeovil, Sturminster Newton, Shaftesbury, Warminster (East Knoyle), Frome, Radstock, Bath—135 $\frac{1}{2}$ miles.

FIFTH DAY.—Bath, Trowbridge, Maddington, Castle Hill, Winchester, Petersfield (Wheatham Priors Dean), Alton, Binstead (Crooksbury Payle Hill), Guildford, Ripley, Brooklands—132 $\frac{1}{2}$ miles.

Twenty-five Laps at Speed.

SIXTH DAY.—Twenty-five laps on Brooklands at minimum speeds varying from 30 m.p.h. in Class A to 45 m.p.h. for the largest solo machines. These speeds are approximately 5 m.p.h. faster than those set for the corresponding test last year, but are generally slightly below the average speed that was reached by those who completed the test in 1920.

The names in parentheses indicate test hills. Entries close at ordinary fees on Saturday next. So far the following entries have been received:

ENTRANT AND MACHINE.

- New Imperial Cycles, Ltd. (three New Imperials).
- R. C. Winn (one $3\frac{1}{2}$ h.p. Douglas).
- Norton Motors, Ltd. (three Nortons).
- Compton (not specified).
- Thompson Bros., Bilston (one 8 h.p. T.B.-Jap).
- Warland Dual Rim Co., Ltd. (one $2\frac{1}{2}$ h.p. Connaught).
- A. G. Wall (one $2\frac{1}{4}$ h.p. Cedros).
- H. J. Wilkes (one $3\frac{1}{2}$ h.p. Rover).
- New Hudson, Ltd. (three $2\frac{1}{4}$ h.p. New Hudsons).
- Phelon and Moore, Ltd. (three $3\frac{1}{2}$ h.p. P. and M's).
- R. C. Davis (not specified).
- Rudge-Whitworth, Ltd. (four Rudges).
- Arden Motor Co. (not specified).
- M. Chereau (one Blériot Whippet).

**Essex M.C.**

Three motor cycle races, each 8½ miles, are included in the programme of the Brooklands meeting of the club to be held on Saturday, the 13th inst.

Abergavenny and District M.C. and L.C.C.

Next Thursday a hill-climb, open to members of the South Wales Centre A.C.U., will be held on Plough Hill, near Abergavenny.

Sheffield and Hallamshire M.C. and L.C.C.

Open to clubs in the Yorkshire Centre A.C.U., the sporting trial postponed from May 7th will be held on August 7th. Useful prizes of Sheffield cutlery are a feature of the award list.

Eastbourne and District M.C.C.

Five teams of four riders each competed in the team trial held in the latter half of July, the winning team being:

A. Jempson (8 Blackburne sc.), J. Mason (4 Blackburne), who each lost no marks; A. Craddock (4 Triumph), 7 marks; and P. Hobden (4 Triumph).

Pontefract and District M.C.

This newly-formed club's hill-climb at Castle Hill, Stapleton, resulted as follows:

CLASS 1.—Machines up to 275 c.c. Flying start: 1. A. Ward (Silver Prince), 50s.; 2. A. Maud (Ixon), 57.25s.; 3. G. Wright (Hobart), 58.4s. Standing start: 1. R. Curtis (New Hudson), 61.6s.; 2. J. Dawson (New Hudson), 62s.; 3. J. Ellis (New Hudson), 63s.

CLASS 2.—Machines up to 350 c.c. Flying start: 1. H. England (New Imperial), 46.6s.; 2. A. Sanderson (Excelsior), 47.6s.; 3. —, Brook (Omega), 48.2s. Standing start: 1. —, Brook (Omega), 55.6s.; 2. A. Sanderson (Excelsior), 56.75s.; 3. H. England (New Imperial), 57s.

CLASS 3.—Machines up to 550 c.c. Flying start: 1. A. J. Campy (Sunbeam), 30.6s.; 2. C. Keyzer (Sunbeam), 31s.; 3. G. W. Shepherd (Sunbeam), 31.6s. Standing start: 1. C. Keyzer (Sunbeam), 35.4s.; 2. G. W. Shepherd (Sunbeam), 38s.; 3. —, Richardson (Norton), 41.8s.

CLASS 4.—Capacity unlimited. Flying start: 1. A. J. Campy (Sunbeam), 30s.; 2. G. W. Shepherd (Sunbeam), 30.8s.; 3. C. Keyzer (Sunbeam), 31.25s. Flying start by request of competitors: 1. G. W. Shepherd (Sunbeam), 31.8s.; 2. —, Richardson (Norton), 33.4s.; 3. H. Wordsworth (Norton), 36s.

Stocksbridge and District M.C. and L.C.C.

Results of the reliability trial held on the 23rd ult. have now been confirmed, and are as under:

PLADDEY CUP AND STACEY MEDAL.—Hugh Thompson (4 Triumph).
SILVER MEDAL.—C. W. Hayward (5-6 Clyno).
BRONZE MEDAL.—W. H. Clarke (3½ Coventry Eagle).

A Section devoted to Club Announcements will be found on Supp. xxxvi.

Bridgwater M.C.C.

Results of the recent Carver Cup trial are:

CARVER CUP.—H. W. Pollard (3½ Sunbeam).
NEXT BEST SOLO PERFORMANCE.—V. G. Tucker (3½ Norton).
BEST SIDE CAR.—H. Milton (4 Triumph).
BEST LIGHTWEIGHT.—F. Hewin (2¼ Blackburne).

Okehampton M.C.C.

It has been decided to form a motor cyclists' club at Okehampton, and the following officers have been appointed: Captain, Mr. J. Everard Hosking; vice-captain, Mr. R. Hawken; and secretary, Mr. W. H. Newman. Fifteen riders joined in the first evening run.

Leeds and District M.C.

Results of the speed trials held on the 24th ult. are as follows:

600 c.c. SOLO.—1. C. Keyzer (3½ Sunbeam); 2. A. G. Ridgeon (3½ Sunbeam).
1,000 c.c. SOLO.—1. C. Keyzer (3½ Sunbeam); 2. A. C. Thornton (6 Ariel); 3. W. Backhouse (4 Triumph).

UNLIMITED CLASS.—1. C. Keyzer (3½ Sunbeam); 2. A. C. Thornton (6 Ariel).
1,000 c.c. SIDECARS.—1. A. C. Thornton (6 Ariel); 2. A. Smith (8 Stanhope).

Central Cornwall M.C.

Over fifty riders competed in the recent hill-climb on Tregolls Hill, and great keenness was displayed for the medal awarded for the fastest time of the day, which was eventually won by Reg. Dyer, of St. Austell, on a 3½ h.p. Norton.

Results:

NOT EXCEEDING 250 c.c.—J. Jenkin (Baby Triumph), 1m. 26s.

NOT EXCEEDING 350 c.c.—Open section: A. Assheton-Salton (2¼ Douglas), 1m. Amateur section: H. J. C. Cornelius (2¼ Douglas), 1m. 6½s.

NOT EXCEEDING 500 c.c.—1. A. Assheton-Salton (3½ Brough), 47s.; 2. P. Phillips (3½ Norton), 48s.

NOT EXCEEDING 650 c.c.—Open: 1. R. Dyer (3½ Norton), 46½s.; 2. A. Assheton-Salton (3½ Brough), 48s. Amateur: 1. R. Dyer (3½ Norton), 46½s.; 2. J. J. Kelly (4 Norton), 57½s.

UNLIMITED.—1. A. Assheton-Salton (3½ Brough), 46½s.; 2. P. Phillips (3½ Norton), 51½s.

SIDECARS NOT EXCEEDING 650 c.c.—H. F. Benny (4 Triumph), 1m. 16s.
SIDECARS UNLIMITED.—1. H. F. Benny (4 Triumph), 1m. 14s.; 2. C. V. Hooper (8 Zenith), 1m. 22s.

Club News—

South Midland Centre A.C.U.

It is now possible to publish the award list of the recent championship trial, in which so many of the competitors lost their way.

CENTRE CHAMPION.—H. H. Saddington (7 JAMES sc.).

GOLD MEDALS.—W. H. Hines (3½ Norton), W. N. G. Phillips (4 Indian), W. F. Johnson (7 A.J.S. sc.), and N. C. Dear (3½ Sunbeam).

SILVER MEDAL.—H. B. Shutes (8 Matchless sc.).

BRONZE MEDALS.—C. Broom Smith (8 Zenith), G. E. Cuffe (2½ Metro-Tyler), S. R. Axford (3½ Norton), and C. Bourlet (3½ Ariel).

Leinster M.C.C.

The following awards are announced in connection with the trial held on the 23rd ult.

GOLD MEDALS (full marks at all controls).—T. E. Green (2½ Enfield), T. F. Slevin (2½ Velocette), C. Johnston (2½ New Scale), G. Thompson (3½ N.U.T.), J. A. Carville (4 Triumph), and P. J. McGlade (4 Triumph). The committee was unable to determine an individual winner, and consequently the six riders will be asked to re-run the trial on Saturday next.

SILVER MEDALS (90% marks).—G. Daly (4 Triumph), R. Murphy (4 Triumph), W. J. Fagan (4 Indian), and F. S. Woods (7-9 Harley-Davidson).

BRONZE MEDAL (85% marks).—W. E. S. Gil-mour (2½ Douglas).

Exeter M.C.

An entry of forty was attracted by an inter-club reliability trial held on the 23rd ult.

Twenty-five per cent. of the competitors were eliminated before lunch, including many experienced riders, and only twenty-three were timed in at Exeter at the finish. This number included Miss Phillips, the only lady competitor. To add to the strenuousness of the trial, torrential rain was experienced on Dartmoor. Several members experienced troubles. A. M. Knill (4 Indian Scout) burst a front tyre in the morning on a non-stop section, and rode thirty miles on a flat tyre, which eventually came off and threw the rider, who finished on a bare rim. Results:

TEAM PRIZE.—Plymouth No. 1 team: J. Baker (3½ Sunbeam), lost no marks; M. Dawes (3½ Sunbeam), lost 24; S. Snell (8 Sunbeam), lost 0. No other complete team finished.

SOLO LIGHTWEIGHT (Silver cup and silver medals).—T. Browning, Exeter M.C.C. (2½ Diamond), lost 5 marks. Special silver medal: Miss Phillips, Plymouth M.C.C. (2½ Connaught), lost 16. No other lightweights finished.

SOLO (Silver cup and gold medal).—G. Morrish, Yeovil M.C.C. (3½ Sunbeam), lost no marks, error 19s.

GOLD MEDALS.—G. Claridge, Exeter (4 Triumph), lost no marks, error 31s.; J. Baker, Plymouth (3½ Sunbeam), lost 0, error 60s.; E. Chudleigh, Exeter (4 Indian), lost 0, error 61s.; F. Wheeler, Plymouth, lost 0, error 161s.; P. Hare, Taunton M.C.C. (3½ Douglas), lost 0, error 169s.; O. Ford, Exeter (4½ B.S.A.), lost 8, stop on non-stop; J. Durrant, Exeter (3½ Norton), lost 8, stop on non-stop.

SILVER MEDALS.—H. Clarke, Plymouth (4½ B.S.A.), lost 8, failed on hill; T. Pullin, Exeter (3½ B.S.A.), lost 16; H. Flower, Plymouth (3 A.B.C.), lost 18; M. Dawes, Plymouth (3½ Sunbeam), lost 24.

SIDECARS.—Silver cup and gold medal, E. Williams, Exeter (4 Triumph sc.), lost no marks, error 16s.; gold medal, L. Peter, Exeter (4 Norton sc.), lost 0, error 23s.; S. Snell, Plymouth (8 Sunbeam sc.), lost 0, error 98s.; silver medal, J. Mercer, Exeter (4 Norton sc.), lost 5.

Redditch and District M.C.C.

Full results of the speed trials held on July 25th are now to hand, and are as follows:

TIME CLASSES.

250 C.C. CLASS (Solo).—1, B. Kershaw (2½ New Imperial); 2, G. Povey (2½ Velocette); 3, T. Weaver (2½ Sirrah).

350 C.C. CLASS (Solo).—1, B. Kershaw (2½ New Imperial); 2, G. Povey (2½ Velocette); 3, A. Taylor (2½ Lewis).

600 C.C. CLASS (Solo).—1, W. E. Smith (3½ Norton); 2, A. Taylor (3½ B.S.A.); 3, A. Wood (3½ B.S.A.).

UNLIMITED CLASS (Solo).—1, W. E. Smith (3½ Norton); 2, A. Taylor (3½ B.S.A.); 3, T. Weaver (5-6 Verus).

600 C.C. CLASS (Passenger).—1, C. Jenkins (4½ B.S.A. sc.); 2, C. Brown (4 Triumph sc.); 3, H. Poole (3½ B.S.A. sc.).

UNLIMITED CLASS (Passenger).—1, C. Jenkins (4½ B.S.A. sc.); 2, L. Perry (10 Morgan) and C. Brown (4 Triumph sc.); 3, H. Poole (3½ B.S.A. sc.).

FASTEST TIME OF DAY.—W. E. Smith (3½ Norton).

FORMULA CLASSES.

250 C.C. CLASS (Solo).—1, B. Kershaw (2½ New Imperial); 2, G. Povey (2½ Velocette); 3, T. Ward (2½ Verus).

350 C.C. CLASS (Solo).—1, B. Kershaw (2½ New Imperial); 2, G. Povey (2½ Velocette); 3, F. Wood (2½ Verus).

600 C.C. CLASS (Solo).—1, B. Kershaw (2½ New Imperial); 2, A. Taylor (3½ B.S.A.); 3, F. Bicknell (2½ Enfield).

UNLIMITED CLASS (Passenger).—1, H. Poole (3½ B.S.A. sc.); 2, E. Raduall (2½ Radco sc.); 3, L. Perry (10 Morgan).

East Midland Centre A.C.U.

Owing to several mistakes and omissions in the division of certain competitors into expert and general classes, the following alterations and additions to the results of the open speeds are announced by the organising clubs:

CLASS 4 (Unlimited sidecar, standing start).—Expert class: P. Baron (7-9 Indian), 41½s., second in place of H. R. Davies (2½ A.J.S.), 42½s.

CLASS 10 (Two-strokes, unlimited).—General: 1, G. Mille (3½ Scott), 41½s.; 2, J. R. Sylvester (2½ Velocette), 46s. Expert: 1, R. E. Pugh (2½ Lewis), 43½s.; 2, Mary Jennison (2½ Velocette), 44s.

CLASS 14 (Solo under 550 c.c.).—General: Oliver Hodgson (3½ Sunbeam), 37½s., second in place of F. Stevenson (3½ Broogh), 37½s.

CLASS 16 (Solo under 500 c.c.).—General: R. Flint (3 A.B.C.), 55s., second in place of R. Carter (7-9 Indian), 56s.

CLASS 21 (Solo under 500 c.c.).—General: F. Hatton (3½ Douglas), 29½s., second vice H. Barron (3½ Norton), 30s.

CLASS 24 (Unlimited solo).—Expert: 1, G. Dance (2½ Sunbeam), 26½s.; 2, R. Cawthorne (3½ Norton), 27s.

CLASS 22 (Machines under 550 c.c.; times taken from 500 c.c. class).—General: 1, R. Flint (3 A.B.C.), 28s.; 2, F. Hatton (3½ Douglas), 29½s.

Expert: 1, G. Dance (3½ Sunbeam), 24½s.; 2, R. Cawthorne (3½ Norton), 27s.

CLASS 23 (Machines under 750 c.c.; times taken from unlimited classes).—General: 1, T. C. Greenwood (4 Sunbeam), 26½s.; 2, R. Flint (3 A.B.C.), 29s. Expert: 1, G. Dance (2½ Sunbeam), 26½s.; 2, R. Cawthorne (3½ Norton), 27s.

Bradford M.C. and L.C.C.

Official results of the Bradford-London-Bradford trial have now been announced as follows:

CLASS B (EXPERTS).

BRIGGS CUP AND GOLD MEDAL.—H. Moore (3½ P. and M.).

GOLD MEDALS.—S. M. Haigh (6 Ariel sc.), A. R. Naylor (3½ Sunbeam), W. A. Dovener (3½ Scott), W. Marriott (4 Norton sc.), G. Townsend (3½ P. and M. sc.), and C. B. Haigh (5½ Scott sc.).

CLASS A (NOVICES).

ARTHUR HODGSON CUP AND GOLD MEDAL.—G. Allen (3½ P. and M. sc.).

GOLD MEDALS.—Miss I. Pickles (3½ Scott sc.), W. E. Anderson (3½ P. and M. sc.), G. R. Cruddy (3½ Sunbeam), R. Turner (2½ Douglas), S. Jepson (6 A.J.S. sc.), R. A. Bonner (3½ N.U.T.), and J. H. Leyland (3½ P. and M.).

SILVER MEDALS.—H. Askham (4 Douglas sc.) and A. D. Thornton (3½ P. and M. sc.).

Rhondda Valley M.C.C.

The first reliability trial of this club will be held this month. Particulars may be obtained from the secretary of the event, The Landlord, The Farmers' Arms, Trebanog, Porth, Rhondda.

Westmorland M.C.C.

At a very successful social run and speed-judging competition held recently, Percy Hoggarth (4 Norton) made the best performance, thus gaining the silver vase presented by the Manufacturers' Union. B. Hill (2½ Velocette) won Mr. Westwood's prize, while Miss Pickles (3½ Scott) was third.

North-west London M.C.C.

During a recent "conducted tour" round the byroads of Herts., the secretary introduced tests comprising speed and distance judging, fast, slow, and flexibility hill-climbing, acceleration, brake tests, and some surprise queries which caught not a few. Prizes were awarded on the combined performance.

1, G. J. Thompson (3 A.B.C.); 2, H. James (3½ Norton); 3, D. F. C. Fitzgerald (4 Norton sc.); 4, W. P. Cooper (3½ Sunbeam); 5, E. T. Pierce (3 A.B.C.).

Kelso and District M.C.C.

Lanton Hill, Jedburgh, presented a scene of great activity on Saturday, the 23rd ult., when the open hill-climb arranged by Kelso and District Motor Cycle Club, and held under the open competition rules of the S.A.C.U., took place. The hill presents a climb of 1,250 yards, with a gradient varying from 1 in 12 to 1 in 6-7. The surface here and there is certainly rough, with large stones in evidence, but on the whole a good track is presented and the negotiation of the two turns does not call for outstanding skill.

CLASS 1 (Motor cycles not over 350 c.c.). Expert barred.—1 (gold medal), E. R. Jacobs (2½ Coulson B); 2 (silver medal), D. Robb (2½ N.U.T.); 3, W. B. Richardson (2½ N.U.T.).

CLASS 2 (Motor cycles not over 600 c.c.).—1 (gold medal), E. R. Jacobs (2½ Coulson B); 2 (silver medal), Alfred Downie (2½ A.J.S.); 3 (bronze medal), J. H. Lindsay (3½ Norton). Gold medal for fastest time: Hugh Mason (3½ N.U.T.).

CLASS 3 (Motor cycles of unlimited capacity).—1 (gold medal), E. R. Jacobs (2½ Coulson B); 2 (silver medal), Alfred Downie (2½ A.J.S.); 3 (bronze medal), J. H. Lindsay (3½ Norton). Gold medal for fastest time: R. J. Braid (7-9 Indian).

CLASS 5 (Motor cycles and sidecars of unlimited capacity). Expert barred.—1 (gold medal), J. O. Turnbull (7-9 American X sc.); 2, Robert Macbison (3½ Norton sc.); 3, T. Gillies (3½ Sunbeam sc.).

Meet of members of the Stocksbridge and District M.C. and L.C. Club, preparatory to their first reliability trial, held over difficult country in Yorkshire.

THE SADDLE THAT WON THE SANGSTER CUP & 3 GOLD MEDALS IN THE LAND'S END TRIALS.

Model 10 as Illustration, £4 10 0.

ABSOLUTELY SHOCK PROOF.

Read what Mr. Short says—

Having ridden your Tan-Sad "No Hurts" Saddle in the recent Land's End Trials and being awarded 2 gold medals and the Sangster Cup, I feel it my duty to tell you again what I think of the Saddle. Having covered well over 600 miles in 2 days' riding, I think it is the most comfortable seat I have struck and I can honestly say I did not have the least sign of soreness, or stiffness in the back, nor did I receive a bad jolt the whole journey.

Wishing you every success,

Yours faithfully (signed) F. SHORT.

And what Mr. Boynton says—

I have pleasure in informing you that I used one of your "NO HURTS" Saddles through the Land's End Trials this Whitsuntide and have much to thank same for. Although some of the roads were absolutely vile, the comfort was a revelation unimaginable, and unless one had the actual experience of riding one of your saddles is almost unbelievable.

Chekkko

Brake and Clutch Linings

AND THE T.T. WINNER—A.J.S.

WE have received the following letter from Messrs. A. J. STEVENS & Co. (1914) Ltd., of Wolverhampton, in response to a simple message of congratulation on their fine results in the recent I.O.M. T.T. Trials.

CHEKKO Brake Linings were used exclusively on the A.J.S. Machines in the Isle of Man Senior and Junior Tourist Trophy Races, with outstanding success.

"Our very best thanks for your hearty congratulations. We may say incidentally that CHEKKO Brake Lining was used, and this proved indeed a triumphant success. As you know the braking on these machines is of the utmost importance. It is usually the back brake that gets it all, and the braking strain must have been so terrific that our metal brake shoes got to such a heat that they were turned blue. This fact alone, so far as the success of the Brake Lining is concerned, speaks for itself."

Sole Makers of CHEKKO:

CRESSWELLS, LIMITED,
Wellington Mills, BRADFORD.

AND ALL GARAGES.

UNIT No. 1

Car Comfort — at Combination Cost

Here is a compact, comfortable, economical and speedy little two-seater, costing little more than a Motor Cycle Combination, either in first cost or upkeep.

You can reach your destination free from dirt or mud, protected by an ample windscreen and a weather-proof hood on a UNIT No. 1.

It can do 40-45 miles per gallon and 40-50 miles per hour. Its efficient 8-9 twin engine and its general design embrace many unique features which only a trial run could enable you to appreciate.

Why not call at our new Showrooms for a trial run? —no obligation. Or shall we send you a descriptive pamphlet?

Experience tells

IT is pleasing to record that two of the greatest motor cycle riders of modern times are believers in the principle of "Extra Air." Mr. H. R. DAVIES'S winning 2½ h.p. A.J.S. in the T.T. races was fitted with an *extra air inlet*.

Mr. H. Le VACK, who secured the magnificent victory on an Indian in the 500 miles race at Brooklands, said in an interview with *The Daily Mail* correspondent: "The carburetter is standard, the only special fitting being an *extra air inlet*." No fitting is used in two such important events as an experiment.

ENGLEBERT TYRES

Super-reinforced

THE cover that has been designed to withstand any strain that it is possible to put it to—that will stand the kick of any motor cycle engine yet made—that will last out any other make.

These covers are a combination of everything that is best in tyre manufacture. The finest possible rubber, the strongest possible walls, and the best brains to make the "best out of them."

IGNITION APPLIANCES.

MAGNETOS 60% Below Original Cost.

CA.V., suitable for any 2 or 1-cyl. engine of less than 5hp., height 4 1/4 in., breadth 2 3/4 in., d from armature driving end to contact breaker 4 1/4 in. They are efficient, and yet have the advantage of being the smallest magneto that can thoroughly relied upon for the purpose recommended. Variable ignition and short circuiting terminal. Magneto has platinum points, and the workman is of the finest. 2-cyl. fires at 180°; provisional 1/4 47/6. All working parts are standard and interchangeable with C.A.V. Types K.U. 1 and 2.

THOMSON-BENNETT 4-cyl. or 8-cyl., variable ignition, clock or anti-clock, £5/5; carriage packing, 5/-.—Below.

BOSCH 1-cyl., clock or anti-clock, as new, £3 variable ignition, 10/- extra.—Below.

THOMSON-BENNETT and M.L.'s of Coventry, L.A.D.S. or P.L.R. types, clock or anti-clock; 3 variable ignition 10/- extra; suitable for station engines.—Below.

THOMSON-BENNETT, types A.M.1 and 2, variable ignition and short-circuiting terminal, clock anti-clock; 50/- each; type A.M.2. fires at 180° Below.

NB.—State whether 1 or 2-cyl., clock or anti-clock when looking at the driving end. Special net price will be made for contract orders to deliver so many per week or month; carriage and packing 1/9 per magneto on 1 and 2-cyl. magnetos.

GUARANTEE.—These magnetos were manufactured in anticipation of Government contracts, and have been some time in stock; it is therefore necessary to throw out any damaged by rough handling and to remagnetise and thoroughly overhaul all others. All our single-cylinders are guaranteed one spark revolution. We guarantee that the work has been thoroughly done by experienced mechanics, and that all magnetos are despatched in perfect working order. Vale Engineering Syndicate, 8-11, Brown's Building, St. Mary Axe, E.C.3. [105]

COUNTY of London Engineering Works, Ltd.

HB. can supply from stock single and twin T.B. 42, 45, 50, 55, and 180 degrees, clock and anti with baseplate and bolts for fitting on Triumph, P.M. B.S.A., J.A.P., Douglas, etc.; £2/10, postage 1/6.

HB. sends all goods on approval per return post on receipt of cash; every magneto sent out carries H.B. 12 months' guarantee.

HB. will take your old magneto in payment.

HB. can offer you large discount for quantities of H.A.C. Titan plugs in boxes, 1/6 each. Send your enquiries to an old-established firm.—H.B. Ignition Co., 78, New Park Rd., Brixton Hill, London. [2305]

MAGNETOS. The real thing, not converted starter magnetos. Genuine Bosch 1914 type, waterproof, anti-clock, £2/1, £3/15.—Marble Area Motor Exchange, 135, Edgware Rd., W. 'Phone: Padd 789. [1616]

CONTINENTAL Ignition Repair Co.—We repair Continental magnetos only. By specialising on Bosch, U.H., Eisemann, Mea, Splitdorf, Dixie, and Berling magnetos, we can naturally give you better service.

PRISE: Rewinding 18/-, condensers 10/-, platinum screws (Bosch standard) 6/-, remagnetising 2/6 slip rings 6/6, H.T. terminals 4/6. Our price for overhauling a motor cycle magneto ranges between 20/- and 35/-, and never exceeds the latter figure. Guaranteed for 12 months, and redespached to you in 2 days.

CONTINENTAL Ignition Repair Co., 13, Harwood Rd., Chiswick, London. [3816]

IGNITION APPLIANCES.

MAGNETO Repairs.—Send your magneto to Palmer's Garage, Tooting. Reply paid, quotation telephoned on receipt; quick, efficient repair guaranteed from 2 to 6 days, usually within 24 hours.—Palmer's Garage, Tooting. [1987]

J.H. Magneto Repairs.—We specialise in these magnetos and can be relied upon to give you good service. A1, B1, A0, KB1, KB2V, KZ2V type spares stocked; prices moderate; 12 months written guarantee.—Charles Parker and Co., Churchfield Rd., Acton, London. [17623]

STANDARD Magneto Co.—For 8 years we have specialised on magneto repairs, during which time we have handled every make and type. Here are 3 strong reasons why you should send that magneto to us and avoid future failures and the consequent expense:

1.—The greatest care and most expert workmanship is put into every repair, and, before despatch, all magnetos are tested for 5 hours at 2,000 revs. under compression and 120 revs. full retarded for over running.

2.—This test justifies us in giving a 12 months' written guarantee with every repair. (Remember a ill-repaired magneto might easily cost you pounds of hotel and rail expenses.)

3.—Unnecessary delay in executing repairs is eliminated by us holding a large stock of spares for Bosch, Dixie, Splitdori, U.H., Eisemann, Mea, M-L, and E.I.C. magnetos, which we can re-despatch in 3 days, or 24 hours when necessary.

STANDARD Magneto Co., 55, Churchfield Rd., Acton, London. 'Phone: Chiswick 1518. [2762]

MAGNETOS.—Thomson-Bennett, clock or anti-clockwise, 42, 45, 50, 55, 180°; and single-cyl. engines, 4-stroke 50°, 2-stroke 57°. All above have variable ignition and are new, waterproof and guaranteed. Write for illustrated particulars.—Super Power Co., 81, North Side, Clapham, S.W.4. [2712]

NISCO. Ignition Specialists to the trade. Actual manufacturers of spare parts for magnetos, dynamos, etc. Repairs to all makes of magnetos, carburettor equipment, electrical and scientific instruments. All work guaranteed.—National Ignition and Supplies Co., Pugh Works, Shirley Rd., Addiscombe, Croydon. 'Phone: 435 Croydon. [2381]

UNBAKEN Repair Service.—Thorough and efficient repairs to any make of dynamo, starter, or magneto have the spare parts, plant, and skilled labour turning out guaranteed work only.—Enclose instructions and send by rail to The Runbaken Magneto Co., Ltd., 115, Portland St., London, W. ('Phone: Mayfair 3586). 'North of England: Derby St., Cheetham, Manchester 'Phone: City 8266. [0258]

MOTOR Cycles, combinations, or sidecars bought for cash or sold for small commission; send details first.—South Eastern Garage, 1-7, Norwood Rd., Herne Hill, S.E.24. [2212]

WANTED, engine, 2½ h.p., 4-stroke, complete with magneto and carburettor, also clutch if possible.—State make, condition, and lowest price to Hill, 13, Eastgrove Rd., Sheffield. [2427]

WANTED, good class modern combination or solo capable sidecar work, cycle car considered; must be reasonable, immediate for cash.—R., 49, Queen's Rd., Finsbury Park, N. [X6177]

ENGINES, singles and twins, J.A.P., Triumphs, M.A.G., Clyno, etc.; also gears and magnetos, hub or C.S.; cheap. State price. 'Phone: 1958 Brixton.—19, Wilcox Rd., South Lambeth, London, S.W.8. [1646]

W. T. DUNN, Ltd., 326, Euston Rd., N.W.1, require unlimited quantity modern solos, combinations, Morgans, light cars, etc.; top prices paid; cash on sight.—'Phone: Museum 5391, write, or call. [0332]

WANTED to purchase outright for cash, bankrupt stocks, W.D. spares, miscellaneous spares; purchased outright. Send full particulars.—McNeille and Platt, 57, Great George St., Liverpool. 'Phone: 1092 Royal. [2391]

CASH on Sight for new and second-hand motor cycles and combinations, any make or condition.—Call, write, or 'phone, Short and Glass, Ltd., 485-493, Upper Richmond Rd., East Sheen, S.W. 'Phone: Richmond 2362 and 2363. [0372]

F.O.O.H. pays highest prices for sound machines. Bring the 'bus along and take the cash away; exchanges arranged.—Rair Offer, Car House, 5, Heath St., Hampstead (near Hampstead Tube Station). 'Phone: Hampstead 3752. Hours 9-7, including Saturdays. [2697]

SEND Your Motor Cycle to Palmer's Garage and Motor Auction Rooms, High St., Tooting. Cash offer telegraphed immediately on receipt; nearest station Wimbledon. We will collect from any London station. Machine can be included in auction sale if desired.—Sole address, Palmer's Garage, Tooting. [1990]

EXCHANGE.

O.K. (see ad.) and cash for late 2½ h.p. Douglas.—H., 63, Solon Rd., Brixton. [2780]

C.B. Sidecar, value £25, and cash for Douglas.—46, Wellington St., Camden Town. [2596]

WOULD Exchange 14-cwt. Ford for motor cycle; £40.—Mulley, Builder, Welling. [2689]

1920 8h.p. A.V. Car, electric lights, for Indian or Scott.—Price, Ashley, Scunthorpe. [2572]

1919 Sporting Morgan and cash for w.c. Morgan.—28, Admiral Seymour Rd., Well Hall. [2496]

A.C. Sociable, 3-wheeler, suit traveller, for solo or combination.—King, Egrove, Oxford. [X6451]

EXCHANGE or sell 3-speed countershaft gear box.—Particulars, 25, Northam Rd., Southampton. [2506]

FAST Twin 4½ h.p. Minerva, m.o.v., waterproof mag., for lightweight.—King, Egrove Farm, Oxford. [X6445]

A.S. New, 3h.p. Royal Enfield twin, 2 speeds, perfect, for countershaft Triumph.—King, Egrove Farm, Oxford. [X6452]

GRADO Gear, kick start; £6/10; anything useful part exchange.—Box 5,534, c/o The Motor Cycle. [2756]

4 h.p. Douglas Combination, 1917-18, fully equipped, and cash for higher power; sell £80.—Coulson, Welwyn, Herts. [2374]

1919 8h.p. Enfield Combination for 3½ h.p. Sunbeam combination, or would sell.—25, Oak Rd., Horfield, Bristol. [2573]

NEW IMPERIAL 8h.p. J.A.P. Combination (1920), for first-class lightweight, or sell £130.—Roberts, Plummers, Plain, Horsham. [2537]

EXCHANGE, P.M. combination, in good condition, for fast solo, Indian preferred, any condition.—551, Holloway Rd., N.19. [2819]

3½ h.p. B.S.A. 2-speed, good reliable bike; exchange for higher power, or sell £40.—Schneider, Filbert House, Castleorton, Malvern. [2639]

3 h.p. Precision Model de Luxe Motor Cycle, 1914, 2-speed, good order, Binks carburettor, for 2½ h.p. Douglas, or 2-speed 2-stroke.—Belov. [2479]

8 h.p. 1919 Carden-Tamplin 2-seater, 3 speeds, kick started from scot. discs, very fast, any trial, for good combination.—Mead, Osborn House, Station Rd., Amersham, Bucks. [2479]

A Scottish Show.

FOR the first time motor cycles are to be exhibited in Scotland in a manner commensurate with their importance. The promoters of the Scottish exhibition next January have agreed to devote a certain amount of space to members of the British Motor Cycle Manufacturers' Union, and the decision, no doubt, will be welcomed by many who desire to interest the Scottish public in their goods. While a goodly number of Scottish motor cycle agents always visit the Olympia Show, only a comparatively small number of northern riders have been able to visit London in order to examine all the latest models under one roof. The Scottish Show, if well supported, should be of immense value to all interested in the motor cycle movement in the North.

The Manufacturers and the Law.

NOW that the police have abandoned their old practice of trapping on safe and open roads, it would appear that they have redoubled their efforts to secure prosecutions of motor cyclists for other alleged offences. Chief among these is the strict observance of the regulations concerning silencing arrangements. Needless to say, as with most other demands of the Motor Car Act, different districts interpret the law in their own way, and, while some authorities are satisfied by a compliance with the letter of the law, no matter how noisy a machine may be, others insist upon that degree of silence which the law was framed to produce. In other words, the police in certain districts are satisfied if an expansion chamber is fitted; others examine motor cycles—with the aid of a stick—to ascertain whether a baffle is fitted. Again, the opinion as to what constitutes an "expansion chamber" is far from unanimous; therefore, to secure immunity, a motor cyclist who intends riding over a large area must not only have a reasonably quiet running machine, but must be in a position to prove that it con-

forms to the law. To do this, it is usually necessary to have a silencer which is considerably larger than the cylinder capacity of the engine.

This should not be so, for the law as it stands does not specify a definite size for the expansion chamber, nor does it make a baffle compulsory. Theoretically, a long exhaust pipe is an expansion chamber within the meaning of the Act, and *if it rendered the machine reasonably silent* no prosecution on this count could be successful.

As everybody knows, however, no long exhaust pipe secures "reasonable silence"; and, as there are many motor cycles on the market to-day, thus fitted as standard, every week sees a fresh crop of silencing prosecutions.

The manufacturers are to-blame in many of the cases, and it is quite a moot point whether they are not laying themselves open to legal actions on the part of those who have bought their machine in good faith and afterwards been prosecuted. In any case, it is incumbent upon them to protect their customers by equipping their machines in a manner which fully conforms to the requirements of the law.

Guineas and Pounds.

SINCE guineas no longer exist as coin or paper money units, it is passing strange that so many manufacturers of motor cycles continue to quote guineas in pricing their productions. At first sight an article priced at, say, forty guineas, appears cheaper than at forty-two pounds, and it is for this reason that guineas retain their popularity with those who have goods to sell and are equally unpopular with those who buy.

The practice, however, deceives no one, and certainly serves no useful purpose, since the public has to convert the figures into pounds, shillings, and pence. In fact, instead of being at an advantage, goods marked in guineas are at a disadvantage, for the reason that the real price is more than that originally suggested.

Curiosities of the Road.

ONE generally encounters some strange equipages on a Bank Holiday. This August the two turn-outs which most tickled me consisted of a push tandem fitted with an Auto-wheel, which was being propelled down the Portsmouth Road at a great pace with the aid of a high pedalling gear by the man and the girl who occupied its two saddles; and a pedalling sidecar combination, complete with a third passenger on the carrier, which I met travelling up hill at a snail's creep. The saddle of the latter was filled by a very devoted papa, who will surely have a jewelled crown hereafter for his self-sacrifice, but whose complexion suggested that his earthly reward might be apoplexy.

Scottish Roads.

WHEN I read our report of the Scottish Six Days, I quite expected that some Hielan' laddies would take umbrage—they are a patriotic race. To some extent I sympathise with the critics, for it is perfectly true that here and there one still encounters magnificent surfaces north of the Tweed, while candour compels us to admit that some of the English roads are appalling. But our reporter did not go beyond his brief. He stated that most of the going included in the trials was bad—I have chatted with many of the riders, and their terminology is much more lurid—and he advised intending tourists in Scotland to obtain road reports from the A.A. Surely a wise precaution!

T.T. Venues.

I AM sorry to differ fundamentally from "Balla-Hair-Neck" on all his points. Brooklands is all very well in its own sphere, but it is no substitute for a road race, for the obvious reasons that it does not test brakes or engine flexibility at all, whilst it furnishes very inferior data about acceleration, steering, and the behaviour of a lubrication system under

roadster conditions. On the other hand, the Manx course is quite unsuitable for the 1,000 c.c. twin, which we need to develop in this country, and also camouflages the superiority which a 500 c.c. engine possesses over a 350 c.c. For these reasons many good judges hope to see a future T.T. contested over a course roughly resembling the Le Mans circuit.

Would You Believe It?

INCREDIBLE as the news may seem, a motor cycle race was organised in broad daylight on the Portsmouth Road last month. Fifteen entries were received, and, escorted by a fleet of attendant motor cars, the event was run off over twenty-one miles on full throttle, most of the machines finishing non-stop. Most marvellous of all, the police did not interfere, though the race started at Putney Hill and the finish was at Wisley Hut.

No, there is no catch. Everything occurred exactly as I have described it, dear reader.

The competing machines? Certainly. They were all converted push-cycles, equipped with an auxiliary motor known as the Cyclotracteur. It is of French manufacture, is attached by clips to the handle-bar and front spindle, and drives by means of a rubber-covered pulley pressing on the front tyre. As it cannot exceed 20 m.p.h., the "race" was perfectly safe and legal.

The Rudge Returns.

FEW people noted that an interesting feature of the Scottish Six Days was the return of the Rudge to competition work. The staff of trials experts, which S. A. Rowlandson collected and captained in the old days, dispersed to the four winds during the war, and the two men who rode the big Rudge outfits up north were both absolute novices at the game. Sibley, I hear, is one of the factory testers, and Nelson looks after Rudge interests north of the Tweed. Both men did well, Sibley being delayed by

Occasional Comments.—

pictures, several of which befell him on observed hills, whilst Nelson found the Corkscrew too much for him, or he would have got the coveted Scotch gold as his first effort. I wonder if these two are to be the nucleus of a new Rudge medal-winning team, and whether next year's T.T.—but that is a long way off yet. Anyway, we all used to marvel at the uncanny way in which Ridges used to produce a small regiment of unknown youngsters on big occasions, and help themselves to most of the fat.

The A.C.U. Six Days.

I HAVE studied the preliminary regulations for this year's Six Days Trials, and, though I am aware that the "trade" have discovered objections, I personally see little wrong with them. Last year the trials tried to find out what the motor cycle cannot do. This year they will show what it can do; and at the same time the standard is set quite as high as the public requirements demand. There are two obvious blots of a minor character, however:

1. *The brake test is on the first day instead of the last. Durability is surely the prime need in a good brake.*
2. *Petrol consumption is to be measured, but there is no rule against changing jets.*

In *The Motor Cycle* for July 28th I described how the single substitution of a 28 jet for a 36 jet raised the consumption of my own 'bus from approximately 2 m.p.g. to 164 m.p.g. The general public want a reasonable consumption without the fag of changing jets, and they will be hoodwinked if the Six Days trials are allowed to use tiny jets for 95% of the distance and to insert a racing jet for the hills and the speed trial.

Dust Mulching the Roads.

DURING drought, the expert kind of gardener "dust mulches" his roses, sweet peas, onions, and other flora. Having no water for external application, he keeps the natural moisture in the ground by perpetually scarifying the ground surface into dust, thus decapitating all the evaporation passages. After the Scottish, the Midland competitors complained bitterly to us that some Scottish road surveyors treat their roads in similar fashion by spreading from two to six inches of fine grit across the full width, and thereby tempting the unwary scrapper to dryskid to his own destruction and the great enrichment of repairers. The A.C.U. ought to keep a wary eye on this matter. It is not only in Scotland that such measures are rife. To name only two examples further south, much of the Winchester-Petersfield and Newbury-Basingstoke roads have been treated after the same fashion.

Sauce for the Gander.

I DO not know why this dust-mulch business has been adopted—probably because it is cheap, and with an occasional raking postpones the day when pot-holes must be retarmaced. Probably it is quite unexceptionable from the standpoint of a horsed driver or a car owner, except that it is rather dusty. But it is quite distinctly unpleasant for all two-wheelers, and especially fast two-wheelers. I am informed that in Scotland several men took nasty tosses when cornering on it, and I personally took some nasty wobbles last week on the two southern roads named in the last paragraph. If the malpractice spreads, motor cyclists will have a lot to say about it; and I imagine that for once in their lives push cyclists will be ready to make common cause with us.

KNIGHTS OF THE ROUND TABLE ON MOTOR CYCLES.

Something like a hundred motor cycles are used in the new Fox film, "A Yankee at the Court of King Arthur," where Sir Lancelot leads a motor cycle army over several hundred feet of film, to the interest of all motor cyclists who see it, and, incidentally, shows the non-motorist how controllable are modern machines, even in the hands of knights in armour.

A Yorkshire Test of a Sidecar Substitute.

ON account of its startling originality, the Scott Sociable has succeeded in creating an immense amount of interest. Some motor cyclists are inclined to fight shy of unconventional design, but there are many who welcome originality in any form, provided, as in the case under review, it leads to an advance.

Some years ago, Mr. Alfred Scott set himself to the task of evolving a mechanical form of passenger machine which should combine the light weight and ease of handling of the sidecar outfit with the comfort and stability of the car, and to achieve this end along sound engineering lines. As might be expected, the result is unorthodox in appearance, though eminently satisfactory in practice.

It was, therefore, with pleasurable anticipations that we accepted Mr. Scott's invitation to view the points of interest in the recent Ilkley Trial as a passenger in his machine.

At an early hour we were picked up in Bradford by one of the little vehicles, and immediately set out for Harden Bank with the intention of reaching the spot before the competitors.

Mr. Scott contends that the public will soon accustom themselves to the unusual appearance of the Sociable, and his theory is borne out by the fact that scarcely a curious glance was directed at the quiet little

three-wheeler as it slipped along over the cobbled streets of its native town. When clear of the town, speed was increased as far as the morning mists would allow, and we had time to appreciate the roominess and excellent springing before arriving at the atrocious surface of Harden Bank. The hill was taken with consummate ease on the low gear of 13.5 to 1, and, in spite of the surface, no discomfort was experienced, the shocks from the rocky surface being converted into easy oscillations by the ingenious tension-spring suspension.

After watching the performance of the competing machines, we short-circuited the trial route by making straight for Park Rash. A run of an hour and a quarter over twisty and undulating roads formed as good a test as could be devised for a vehicle of this description, and in no point did it fall short of the ideal.

Except when racing the engine on low gear, the presence of the power unit was only noticeable by its smooth propulsive effort; corners can be taken without unpleasant rolling, and without any tendency for the wheels to lift; springing is better than on most light cars, and there is plenty of room for two large passengers. The 578 c.c. twin two-stroke engine is practically inaudible from the passenger's seat, and will hold on to a top gear of 4.5 to 1 on all ordinary hills. Middle gear provides a ratio of 7.03 to 1, and is suffi-

The complete unit with gears and clutch is easily detached, being held to the chassis with four bolts only.

the Scott Sociable—

ent for any but the steepest gradients. Both brakes powerful and smooth in action, and our sole criticism was directed towards the bevel drive, which was rather noisy.

With regard to speed, it may be mentioned that it was possible to exceed the legal limit in low gear up quite considerable slopes.

On reaching Park Rash, the first of the competitors had already arrived, so an attempt on the hill had to be postponed till after the trial. Never have we seen the dreaded hill in more difficult condition; loose stones and thick dust covered the whole surface, and not even the usual narrow track of fairly firm surface was to be found. Some of the solo motor cyclists scrambled to the top without actual assistance, but scarcely a man made a really clean ascent.

A "Mix up" on Park Rash.

Of the passenger machines, three sidecar outfits made wonderful climbs, but no light car or three-wheeled machine got further than the first bit of gradient. Even Mr. Scott, who informed us that he had never yet failed in his many attempts on the hill, had qualms about the existing conditions. These fears proved to be well grounded, for, though the Sociable got at least as far up as any of the competing light cars and runabouts, it came to a standstill with the driving wheel revolving merrily. Since most of the "assistance" had by now left the hill, we had somewhat of a scramble to get the machine off the hill, and, in the general "mix up," the middle gear was unfortunately damaged. Although this mishap

The Scott Sociable on the last of the difficult "hairpins" on Thwaites Brow, near Keighley.

The Stake, which was next visited, is too easy an ascent to worry the Sociable, and we were content to climb to a convenient observation post well above the first steep section and watch the performances of the competitors. On the homeward journey, a terrific thunderstorm caused us to forsake the dickey for the comfortable interior, wherein three and a dog managed to find room without any considerable discomfort. Now indeed were we able to appreciate the V fronted windscreen and the very easily manipulated hood, which can be raised and fastened in position without slowing the machine. A slot in the windscreen enabled our pilot to carry on in spite of the drenching rain, which caused many cars to halt by the roadside on account of poor visibility.

The Scott Sociable is now in production, and we are not surprised to learn that it is in considerable demand. It is particularly well suited for a lady driver, for the carburetter may be flooded, and the engine primed, if necessary, from the driver's seat; the hand starter within the body is also an excellent device. It should be added that every detail of the machine, from the engine to the door catch, shows evidence of an engineering brain behind it, and we at any rate were charmed with its excellent running.

The engine of the Scott Sociable is instantly accessible by the moving of a "roll top" cover.

CYCLE CARS OF OLDEN DAYS.

AN impecunious and disabled friend of mine, whose damaged limbs render solo work impracticable, invested in a very cheap cycle car. In his early trips the steering of the 'bus scared him stiff, and, having been a manufacturer in a small way during a previous era of health and wealth, he began to study the layout to see what could be done. Illumination

came when the cycle car was poised outside a house on a steeply cambered road. There was so little give in the front springs that, whilst the off side front tyre reposed securely on the road, the near wheel was suspended 1½ in. above the roadway. It followed that occasions arose in cornering over pot-holes when *neither front tyre touched the road at all!*

IXION.

A FASCINATING SOLO MACHINE.

The 500 c.c. Oil-cooled Zenith-Bradshaw now in Production.

UNDoubtedly one of the attractions at the last Olympia Show was the flat twin engine exhibited by Messrs. Zenith Motors, Ltd., and designed by Mr. Granville E. Bradshaw, of A.B.C. fame. For many years Mr. Bradshaw has been regarded as a revolutionist where design is concerned. His last year's effort somewhat startled the older school of designers and riders by the fact that all but his cylinder heads were enclosed in the crank case, and that the cylinder walls were cooled by oil.

The design was the outcome of extended experiments made with aero engines during the war, when it was found that with the average so-called air-cooled engine a great deal of the heat was being dissipated internally through the oil. The success of the engine's running under such conditions prompted Mr. Bradshaw to make proper provisions for oil-cooling by mechanical means rather than by accident, and the oil-cooled Zenith-Bradshaw at the last Show was the outcome.

Clean Design.

Since the exhibition of this new model, there has been a great deal of refinement introduced, for, as with all new things, it was hardly to be expected that the first design would be unaltered before production. There was also the question of frame design to be considered, and the chief point of criticism—the external oil tank—to be removed.

The result of these months of work is one of the nicest sporting solo machines it has been our pleasure to ride, and now that deliveries are commencing, it will

As will be seen, the new Zenith - Bradshaw is quite a small mount. Mr. F. Barnes, however, demonstrates that it is not too small for a tall rider.

soon be in the hands of the public in numbers; of that we are convinced, provided the qualities of reliability and durability are in keeping with its many good points, and we see no reason why they should not be so.

While retaining the essential features

In the "production" model of the $3\frac{1}{2}$ h.p. Zenith-Bradshaw engine, the oil tank has been eliminated. The oil, which is used for both lubricating and cooling, is carried in a sump, sufficiently large for 500 miles running.

of the original design, the new engine differs in many respects. First of all, the auxiliary tank under the engine has been eliminated, and the oil—sufficient for 500 miles—is carried in a sump in

Flywheel side of the Zenith-Bradshaw, showing how the engine is suspended in the frame. Observe that the tank rests on platforms at each end.

the lower half of the crank case. A single rotary pump is now used for circulating the oil, instead of the two pumps governing the supply in the original machine.

The oil is pumped up to the drilled crankshaft, and passes *via* the crank webs

to the big ends, and is thrown off by these and from an orifice in the second outside crank web, whence it is distributed over the whole of the interior of the engine. From the upper side of the cylinder barrels, the oil passes, by a series of holes, to the piston, finally draining back to the sump.

Hemispherical Cylinder Head.

Another alteration is the fitting of hemispherical cylinder heads with inclined valves, operated by more or less conventional rockers *via* push rods placed close together under the cylinders. This position, however, is not so inaccessible as one might imagine, as, by leaning the machine on its footrests, it is quite an easy matter to effect adjustments.

A double row ball bearing supports the crankshaft on the driving side, and a single row at the other end. Aluminium flat-topped pistons are used.

The cylinders are 68x68 mm. bore and stroke (494 c.c.).

The accommodation of a flat twin in a motor cycle has not been the easiest task of designers, and the Zenith-Brad-

Fascinating Solo Machine—

shaw proved to be no exception. These difficulties have, however, been overcome very successfully by a frame following conventional Zenith outlines, but which differs in many respects at minor points. For example, the horizontal tube immediately below the tank is eliminated, the tank being supported on platforms at each end. Some distance below the tank a tube binds the frame together, and from this the engine is hung.

The provisions made for operating the well-known Gradua gear also are new, and consist of a vertical shaft carrying a bevel at its lower end, meshing with a similar bevel on a longitudinal shaft extending rearwards. At the end of this shaft is fitted the sprocket for the chain operating the mechanism of the sliding fork members.

Fitted with 26x2½ in. tyres, the machine is delightfully easy to handle, due to the fact that the engine is carried below the wheel centres; and this, combined with the low saddle position, the position of the footrests, and the design of the

handle-bars, gives that feeling of security specially appreciated by those who are short in the leg. On the other hand, the tallest rider is not cramped, for Mr. Fred Barnes—whose name is always associated with Zeniths—is a tall rider, and the machine could not be more comfortable for him had it been "made to measure."

Mud and Skid Protection.

Guards are to be fitted to protect the carburettor and the pulley, while, as a safety guard to protect the engine in the case of a spill, two longitudinal tubes are fitted, which carry auxiliary footrests at the fore end. We term them footrests for want of a better name, for they will rarely be used for the feet, even by the tallest rider.

It was our pleasure to try the machine on the road. Incidentally, the present writer has never been fully converted to all-chain drive, even for sidecar work, and has fully appreciated the recent correspondence in *The Motor Cycle* on the fascination of belt drive. The use of all-belt drive, however, has been con-

fined to lightweights, so it was necessary, first of all, to attempt to analyse our impressions in order to apportion correctly the good points of the Zenith-Bradshaw—to decide, in other words, whether it was "Zenith" or "Bradshaw," which produced such refined motion.

The engine is practically vibrationless—silent save for the burble of the exhaust. In fact, first impressions are of motion alone. One can neither hear nor feel machinery in motion. One just opens the throttle and leaps forward.

The gear range is that usually provided by the Gradua gear, and, unlike the majority of flat twins, the new Zenith pulls well at low speeds. It is possible to slow down to a crawl and to accelerate without reducing gear. With the Gradua gear it is possible to find just the right ratio for the moment.

To summarise, the new Zenith-Bradshaw is a most fascinating machine, and, when it becomes known, it will be very popular as a sporting mount. The price is £118.

HILL-CLIMB ON A DURHAM FELL-SIDE.

Strong Wind Prevents High Speeds in Newcastle Club's Open Event.

An old fell-side milestone made an excellent starting post in the recent Newcastle and District M.C. open hill-climb. G. S. Boston (2½ A.J.S. sidecar), who made several excellent climbs, both solo and sidecar.

OVER a kilometre course on Muggleswick Common, a wild stretch of moorland road between Stanhope and Edmundbyers, Co. Durham, the N.C.U. open hill-climb, organised by the Newcastle and District Motor Club, took place on Saturday, the 30th ult. The event attracted 168 entries, the principal award being the Alan Robson Challenge Shield for the fastest time of the day. The hill has a gradient of about 1 in 13, practically straight, and, as the surface was good, some remarkable times would have been put up had it not been for the very stiff head wind which almost amounted to a gale. The effect of the wind was plainly noticeable as the competitors breasted the first rise and got the blast from the moors.

Throughout the whole of the day G. S. Boston's 2½ h.p. A.J.S. ran remarkably well, annexing many firsts both in the solo and sidecar classes. Hugh Mason was beside an all-chain drive N.U.T., and, at for clutch trouble, in Class 3, would not doubt have carried off the premier award, the liveliness and acceleration of

his engine up to the time of this trouble being most remarkable.

The results, subject to A.C.U. confirmation, are:

CLASS 1.—Solo machines up to 250 c.c. Section A. On time: 1, F. J. Price (2½ Diamond), 46½s.; 2, D. Prentice (2½ New Imperial); 3, S. A. Marks (2½ Diamond). On formula: 1, D. Prentice; 2, F. J. Price; 3, F. Turvey (2½ Velocette). **Section B.** On time: 1, H. F. Brockbank (2½ Brock-Blackburne), 43½s.; 2, J. Johnson (2½ N.U.T.) and Davison Hull (2½ Dot-Jay) tied. On formula: 1, H. F. Brockbank; 2, D. Hull; 3, J. Johnson.

CLASS 2.—Solo up to 350 c.c. Section A. On time: 1, G. S. Boston (2½ A.J.S.), 38½s.; 2, C. Fairweather (2½ Blackburne); 3, D. Prentice (2½ New Imperial). On formula: 1, G. S. Boston; 2, D. Prentice; 3, F. J. Price (2½ Diamond).

CLASS 3.—Solo up to 500 c.c. Section A. On time: 1, G. S. Boston (2½ A.J.S.), 36½s.; 2, H. Mason (3½ N.U.T.); 3, C. N. Sadler (3½ Norton). On formula: 1, G. S. Boston; 2, D. Prentice; 3, C. N. Sadler. **Section B.** On time: 1, W. Holliswell (3½ Norton), 41½s.; 2, C. N. Sadler (3½ Norton); 3, R. W. Loughton (3½ Douglas). On formula: 1, H. F. Brockbank (Brock-Blackburne); 2, C. N. Sadler; 3, R. W. Loughton.

CLASS 4.—Solo up to 750 c.c. Section A. On time: 1, G. S. Boston (2½ A.J.S.), 37½s.; 2, W. Holliswell (3½ Norton); 3, C. N. Sadler (3½ Norton). On formula: 1, G. S. Boston; 2, D. Prentice (2½ New Imperial); 3, C. N. Sadler. **Section B.** On time: 1, W. Holliswell (3½ Norton); 2, C. N. Sadler (3½ Norton); 3, J. Lee (3½ Sunbeam).

CLASS 5.—Solo, unlimited. Section A. On time: 1, G. Grinton (7-9 Harley-Davidson), 36½s.; 2, G.

S. Boston (2½ A.J.S.); 3, W. Holliswell (3½ Norton); and Hugh Mason tied. On formula: 1, G. S. Boston; 2, D. Prentice; 3, F. J. Price. **Section B.** On time: 1, G. Grinton (7-9 Harley-Davidson), 37s.; 2, P. Baron (7-9 Indian); 3, W. Holliswell (3½ Norton). On formula: 1, H. F. Brockbank (2½ Brock-Blackburne); 2, S. Bell (3½ Norton); 3, R. W. Loughton (3½ Douglas).

CLASS 7.—Passenger machines up to 600 c.c. Section A. On time: 1, G. S. Boston (2½ A.J.S.), 48½s.; 2, J. Whalley (3½ Sunbeam); 3, G. Clapham (3½ Scott). On formula: 1, G. S. Boston; 2, J. Whalley; 3, G. Clapham. **Section B.** On time: 1, G. Clapham (3½ Scott), 55½s.; 2, J. Whalley (3½ Sunbeam). On formula: 1, J. Whalley; 2, G. Clapham.

CLASS 8.—Passenger machines up to 750 c.c. Section A. On time: 1, G. S. Boston, 48½s.; 2, J. Whalley. On formula: 1, G. S. Boston; 2, J. Whalley. **Section B:** J. Whalley, walk over.

CLASS 9.—Passenger machines, unlimited. Section A. On time: 1, P. Baron (7-9 Indian), 47½s.; 2, G. Grinton (7-9 Harley-Davidson); 3, G. S. Boston (2½ A.J.S.). On formula: 1, G. S. Boston; 2, P. Baron. **Section B.** On time: 1, P. Baron (7-9 Indian), 46½s.; 2, G. S. Boston (2½ A.J.S.); 3, R. F. Pritchard (8 Morgan). On formula: 1, J. Whalley (3½ Sunbeam); 2, G. Grinton (7-9 Harley-Davidson); 3, R. F. Pritchard.

The Alan Robson Challenge Shield was won by G. Grinton (7-9 Harley-Davidson), whose fastest time was 36½s. Owing to insufficient entries, Class 6 for passenger machines up to 350 c.c., had to be abandoned.

PASSENGER MACHINE TOPICS.

Jottings on Matters of Interest to Owners of Sidecars and Cycle Cars, not to mention their Passengers. Collated by "Vedette."

WHAT is a passenger machine these days? There are readers who will say that every motor-bicycle on which the carrier is utilised as a pillion seat is a passenger machine, and the designer of the Reynolds Runabout evidently appreciates this. It is one of the few machines intended for tandem riding, although its utility is not confined to economical motor-ing for two, and it certainly has many points to commend it to those who desire a single track runabout providing protection for the attire. For tandem riding, it is supplied with two seats, the second passenger being accommodated on the rear part of the sprung platform, which, with the seat removed, may be used for luggage. A commercial traveller might carry quite a useful amount of samples. At first sight this little machine strikes one as being a glorified scooter, but as it is fitted with 550 x 65 mm. tyres (the size used on the Baby Peugeot car), has a Liberty two-stroke engine, a clutch, kick-starter, and two-speed gear, the specification is that of a motor cycle. The general layout suggests that the designer knows

On the road the Reynolds Runabout is simple to handle at the lowest speeds, but is capable of a maximum equal to the average lightweight.

The Reynolds Runabout, a machine distinctive in design and comfortable to ride. The long lever operating the rear stand is clearly shown.

that there is a vast public that requires a vehicle on scooter lines which is not a toy. People jibe at motor cycles for some reason or another. Having recently had one of these machines in my possession, I was much impressed by the interest displayed by people who certainly were not motor cyclists or even potential motor cyclists. Ladies and elderly people particularly seemed to think that it was the type of vehicle they wanted. I will give an example of the attitude of these good people by citing that of a lady of my acquaintance. She has never felt confident to ride or drive a motor cycle, yet when the Reynolds drew up at the door, she at once exclaimed that it was "what she wanted." After a few minutes explaining the functions of the levers (for-

gotten one minute later) she retained the knowledge that the operation of the single lever of the Cox carburetter made the machine go faster or slower, and that by lifting one of the levers (the compression release) the engine stopped. With this scanty knowledge she glided away with her friends watching, and expecting that she would stop at the first corner for some one to turn the machine round for the return journey. This lady did a circuitous ride lasting over half an hour, on low gear, for the reason that it had not been deemed necessary to explain the functions of the gear lever. Sighting a friend walking on the pavement, she ranged alongside and slowed down to walking pace, discussed the merits of motor cycles, and afterwards proceeded on her way. At no time did she feel nervous, and one more lesson

The spring frame Matchless as a sporting sidecar outfit. Observe the position of the spare wheel.

passenger Machine Topics—

would have fitted her to undertake the longest journeys and through town traffic. As regards the speed of the machine, I can mention that on one thirty-mile journey it led two big twin sidecar outfits at a speed which the latter do not as a rule exceed—and this, also, in the hands of a lady. Comfort? The long wheelbase, large tyres, and Flexiforks give the impression that the frame is sprung. Of course, the seat is on long leaf springs. Tractability? It is as easy to handle as a lightweight motor cycle, is even easier to move about, and placing the machine on the stand is facilitated by a long hand lever. Ware and de Freville, Ltd., of 288, Regent Street, Oxford Circus, W.1, market this fascinating machine.

* * *

The popular Matchless-M.A.G. machine appears most attractive in its new guise as a sporting big-powered twin. Although the machine itself is, with the exception of the new footrests and the wider handle-bars, identical with the model H, the low racing sidecar completely changes the general appearance of the outfit. The sidecar body is carried low down on the standard chassis, and is suspended on coil and laminated springs at the rear and front respectively, yet the sociability of the outfit has not been lost, and, owing to the quiet running of the engine, conversation can be carried on without undue raising of the voices, for a long plated pipe carries the exhaust gases well to the rear of the machine, where they are almost inaudible. The spare wheel has been robbed of its usual housing, and is now mounted

8 h.p. Sunbeam outfit owned by a northern reader. Observe the curved dash in lieu of an apron, mentioned by the writer of this article.

healthy turn of speed developed was found to be far ahead of that obtained on the big standard outfits.

* * *

There are few things made that are not capable of improvement. Take the Ford for example. It is said that the industry that provides for improvements for this well-known American proposition employs more men than the Ford works themselves. Then we have leg-guards and footboards for Triumphs, hand-controls for the clutches of B.S.A.'s, and foot-control attachments for Sturmey-Archer gears. Now Mr. A. E. Tansley, of 162, Lenton Boulevard, Nottingham, has introduced a set of adjusters for Cameo windscreens. Known as the Sunorain, this fitting appears to overcome a small disadvantage of the excellent Cameo screen; it provides fore and aft adjustment, so that the screen may be used to advantage when a juvenile is carried. The price of the Sunorain is 27s. 6d.

I think the majority of sidecar passengers will agree with me that an apron no longer serves the requirements of our sidecar passengers. On my own machine my passenger has frequently complained, after a long run in the rain, that a pool of water collects in the apron, and finally percolates through and allows water to drip on to the knees. Several sidecar manufacturers have recognised the need for something more permanent than an apron of hood material, among them the A.J.S., Excelsior, and the Sunbeam. An illustration of the 8 h.p. outfit of the latter make accompanies these notes, from which it will be seen that a well-shaped dash is fitted. There

A Cameo screen fitted with the "Sunorain" adapter, enabling the screen to be used when an extra passenger is carried.

on a plate on the off side of the carrier—a convenient position—whilst its weight is of use to the back wheel when freak hills and the like have to be negotiated. The passenger literally lies in the sidecar, whilst the provision of a pad to support the knees makes the comfort of the seating position complete. A short trial spin on the new model was enjoyed, and the

is, however, one little point which most makers of this type of sidecar overlook, and that is that the hinge is not water-tight. A member of *The Motor Cycle* staff has overcome this by fitting a strip of rubber over the hinge from one side of the body to the other. The Sunbeam outfit mentioned is owned by Mr. G. G. Thompson, of Wooler, Northumberland.

A REFINED SPORTING MOUNT.

NOW that 250 c.c. lightweights so often attain the once-magic figure of 60 m.p.h. in speed events, it is not surprising that it should strike somebody that there is a market for what may be called a *de luxe, vitesse* baby machine, to be guaranteed capable of reaching the mile-a-minute gait.

Such a machine is now being introduced by the Coventry Eagle Motor Cycle Co., Ltd., Coventry; and the designer, Mr. P. C. Mayo, has been guided by the same general principles as he used when evolving a growingly successful British sporting big twin, to which the latest production bears some detail resemblance.

Price will not be Excessive.

While no attempt has been made to build the new lightweight down to a price—it possesses an almost "regardless of cost" finish—it is not expected that the price will be prohibitive; indeed, £85 is mentioned as a tentative figure for the two-speed model.

Turning to details, it is quite impossible to describe the exact shape of the distinctive dull black saddle tank, beyond saying that no photographs can fully convey just how attractive it is. It holds over two gallons, and feeds the Amac two-lever carburetter by a separate pipe from each compartment. One tap only, therefore, need be turned on, the other half of the tank acting as a spare petrol container.

The frame is neat and strong, and distinctive because of the way in which the cradle engine plates form integral lugs with the down tubes. Modified Brampton forks, with solid links substituted for the horizontal coils, are fitted, and here, again, lugs are cast for the Webb front brake mounting and a special bracket for the baby Lucas

A New o.h.v. Coventry-Eagle Lightweight.

Broadside view of the single-gear model which will be sold fully equipped, as shown, with the addition of a chain guard but without discs.

head lamp (which will be supplied with each machine).

Braking Arrangements.

At present the rear brake is of the simple heel-operated dummy belt rim type, but later it is proposed to embody a Webb internal expanding brake in the rear wheel.

Although the engine is a proprietary unit—a 70×64.5 mm. (249 c.c.) o.h.v. J.A.P.—it has so many points of interest, some of them modifications by the present designer, that we have reserved its description to the last. Externally, the most striking point must be the exhaust arrangements. To design a clean and neat passage for the gases on an o.h.v. engine is not an easy task: in this case the difficulties have been overcome in an admirable way. A finned aluminium casting, projecting well out into the oncoming air draught, and of at least 1½ in. internal diameter, acts virtually as a primary expansion chamber. Then a short length of plated pipe

extends down to the large streamlined aluminium silencer, another large bore tail pipe reaching well beyond the bottom bracket and ejecting the gases outwardly instead of directly to the rear. The engine is an exceptionally nice-looking design, and besides the special "buffed" finish of the crank case, it embodies several departures from standard J.A.P. practice. Double taper valve springs are employed, internally

This sketch illustrates the finned primary exhaust pipe, and also the cradle frame lugs.

coned washers and taper split bushes gripping the valve stems in such a manner that the cotter pins become merely a safeguard. Hardened steel rockers are fitted, and the valve-operating mechanism has been refined in one or two other details.

Transmission.

Single all-chain drive, by means of a double roller Coventry chain, is employed in the present model, but it is intended to introduce a two-speed countershaft machine at once, and possibly a mode with the new lightweight Sturmey three speed box in the future.

Showing the clean engine design, the "streamlined" silencer, and the standard position for the Lucas generator.

A SCOTT SOCIABLE ON THE ROAD.
INTERNATIONAL SIX DAYS TRIAL.
NEW SOLO MODELS.

Bournemouth Undercliff Drive.

Bournemouth Corporation Beach Committee has decided that if motor cyclists do not more satisfactorily observe the speed limit on the Undercliff Drive it will consider the advisability of prohibiting motor cycles altogether on the Drive.

The Roads Department.

The Roads Department of the Transport Ministry employs 108 persons at salaries totalling £57,887 as against twenty-one persons employed by the old Road Board at a cost of £10,447; yet, says the *Sunday Pictorial*, the main road grants to various county councils have been simultaneously reduced.

Open Hill-climb near Bath.

There are nineteen motor cycle classes on the programme of the Western Centre A.C.U. open hill-climb, to be held at Kingsdown Hill, near Bath, on Saturday, the 20th inst. Fastest time of the day will gain the "John Bull" Challenge Cup. Entries must reach the secretary for the event, Mr. H. W. Jacobs, 4, Ravenswood Road, Redland, Bristol, by next Saturday, at ordinary fees, or the following Tuesday at double fees.

Cooling.

Now a marketable proposition—a machine fitted with an oil-cooled flat twin engine (see page 164).

Motor Cycles Replace A.A. Pedal Cycles.

At the sixteenth annual meeting of the A.A. and M.U. it was stated by the chairman that the road patrols were now nearly all provided with motor cycles, instead of pedal cycles, as in pre-war days.

International Six Days.

The Six Days Trial organised for the F.C.M. is little more an international trial than any other Six Days Trial. Only two teams competed for the International Trophy—Switzerland and Great Britain.

Public's Point of View.

Letters received from readers regarding the stringent conditions of the Six Days Trial indicate that modern motor cycles are expected to emerge from such a trial with honours, and that to refuse to support the trial is an admittance that the conditions are too severe. As more than one reader points out, the conditions are the same for all entrants.

Immediate Reduction in Taxation.

In the recent Parliamentary discussion of the Finance Bill, Lt.-Com. Kenworthy moved a new clause to reduce the duties on motor cycles and the like by 50%. Mr. Neal, Parliamentary Secretary to the Ministry of Transport, in resisting the proposed new clause, said that the duties had not been in operation for a full year, and it was too soon to begin raising them. The whole of the motor taxation, including the duties on motor cycles, was the result of most careful examination by a committee representative of all classes of motorists, including motor cyclists, who had investigated the problem in every aspect, and who had made unanimous recommendations, having regard to the cardinal principle that it was the use of the roads that was to be taken into account. The new clause was rejected by 177 votes to 58.

The A.C.U. Six Days.

There is still time for manufacturers to amend their decision regarding the A.C.U. Six Days. Entries do not finally close until Saturday. Over sixty entries have already been received. Last year 133 competitors took part.

To Ex-D.R.'s of the 15th Division.

Ex-D.R.'s of the 15th Division Signals have formed a "15th Division D.R.'s Reunion Circle." Potential members may obtain further particulars of the scheme from Mr. W. W. Manley, 6, Franklin Street, Belfast.

Seventy-six Entrants in a Local New Imperial Rally.

Social or competitive events confined to riders of any particular make of motor cycle are becoming quite popular, and such an event organised recently in Blackburn for New Imperial owners attracted no fewer than seventy-six entrants.

RATHER MORE THAN A "SPLASH."

An incident in the recent Neath and District M.C. trial to Llandovery and back. Ivor Thomas (3½ Sunbeam) in difficulties in the swollen watersplash at Sennybridge.

All letters must be addressed to the Editor, "The Motor Cycle," Hertford Street, Coventry, and must be accompanied by the writer's name and address.

BRAKES ON SIDECAR TAXIS.

Sir,—As a motor cycle taxi owner and driver I was interested in the County Cycle Co.'s letter in a recent issue. My machine was built by the Campion Cycle Co., and is, I believe, the largest on the road; it will take two passengers and 2 cwt. of luggage. Only one brake is fitted to the back wheel—of the internal expansion type—and is actuated by pedal and rather a long rod. The action of the brake is smooth and there is no apparent side pull with or without load. The machine is beautifully balanced, and I consider this balancing in heavy sidecar outfits most important; the lack of it probably has a great deal to do with any pull to the right when braking.

L. A. SAKER.

PETROL TINS ON SIDECARS.

Sir,—I am obliged to Mr. E. Bridgeland and Mr. Taylor for their replies to my letter on the above subject. In reply to the former, his suggestion is not of much use, as I use the carriers on both sidecar and cycle to carry my luggage; hence it does not answer my question as to vibration.

In reply to Mr. Fred Taylor, he has missed the point altogether. Why it is necessary to carry two gallons is that so many dealers refuse to split a can. Moreover, I have tried the smaller tin, and found that it is an extremely difficult proposition to make such a can leak-tight, even with a leather washer.

I am, however, having a special can made now, which I think will solve the difficulty.

R. C. MEASURES.

[That "many dealers refuse to split a can" is a statement that does not by any means bear out our recent experience.—Ed.]

Sir,—May I reply through your correspondence columns to a letter from Mr. R. C. Measures, published in your issue of June 30th, on the unsuitability of the petrol tin carrier on the Triumph sidecar?

I should like to state that, having a 1920 Triumph and Gloria, I have found the petrol tin carrier everything that could be desired, as I have driven the outfit from Alexandria to Cairo and back over mud roads which have never seen a steam roller, during the week's run covering close on five hundred miles without the slightest trouble, and have always found the petrol tin in perfect condition. Possibly the tins supplied abroad are of thicker metal than those at home.

H. HARVEY GEORGE.

Alexandria, Egypt.

TO PREVENT SKIDDING.

For dirt track racing in America—its original purpose—this rudder, which is said to banish rear-wheel skid when cornering at speed, may possess advantages, but we do not think it very likely to become popular with British speed-men. It is operated by light cables attached to the front fork, the rudder turning in the opposite direction to the wheel.

LOOK-OUTS FOR HEAVY MOTOR VEHICLES.

Sir,—With reference to your article headed "Motor Coaches" in your issue of July 14th, it may be of interest to know that in Uganda it has been the law for several years that "all heavy motor vehicles shall carry a 'look-out' behind, whose duty will be to signal to the driver warning him of the approach of faster overtaking traffic." Compared with home roads, the roads in Uganda are certainly much narrower, but the "look-out" business works exceedingly well, and I should certainly like to see something of the sort introduced in Great Britain.

My own experience in England has been that the great majority of drivers of heavy vehicles do "pull over" promptly, but, unfortunately, one does meet those who refuse to budge and keep one crawling behind for long distances.

W.M.Y.

Birmingham.

Sir,—Referring to your leading article on "Motor Coaches," I should like to add another suggestion, and that is that all motor vehicles capable of travelling at over 5 m.p.h. should be compelled by law to fit pneumatic tyres. In my opinion, it would save the owners a considerable amount in repairs, and also the roads could be kept in decent order at about half the present cost of upkeep. No char-à-banc or 'bus should be allowed to carry more than twenty persons.

I am living in a district where the heavy motor traffic is enormous. Consequently, the roads are in a terribly bad and dangerous condition. I have got to go at least twenty miles before I can get on what may be called a decent road. Broken frames and chassis are a common occurrence.

What do we pay a big tax for? To keep our motor cycles and light cars in the garage? What pleasure is there in getting bumped about and waiting every minute for something to break? Many of my motoring friends have declared that they are going to give it up altogether. I think it is a crying shame that these transport 'buses and chars-à-bancs, carrying anything up to forty persons, should be allowed to tear up the roads and travel at such a speed as they do, to the danger of their passengers and also other users of the road.

I quite understand that people living in areas where heavy motor traffic is seldom seen are unaware of the state of things.

Glamorgan.

D.T.W.

NOISE—MECHANICAL AND EXHAUST.

Sir,—My motor cycle is a $3\frac{1}{2}$ h.p. single-cylinder of a well-known make, holding numerous records on Brooklands track. Recently I was summoned and fined for riding an excessively noisy machine.

The silencing arrangements consist of a pipe about 5ft. by 2in. diameter, and having a device called a "muffler" on the end. The "muffler" and pipe have not been enlarged or altered in any way, and are in exactly the same position as when I first bought the machine.

Naturally, on buying the machine I understood it was available for ordinary road use, but evidently this is not so. The manufacturers are turning out machines having exactly similar silencing arrangements as mine at the present date; so here we have a standard machine which the manufacturers state to be suitable for touring, whereas the rider of such a machine renders himself liable to prosecution if venturing on the road. This seems a breach of faith with their clients on the part of the manufacturers. Personally, I am disposing of my machine for one that is rideable.

Kenilworth.

FED UP.

Sir,—Have any of your numerous readers noticed a Rolls moving along a good road at 50 m.p.h.? Have they also noticed any high grade motor cycle performing the same feat? What is the chief difference? Silence on the part of the former; noise on the part of the latter.

The Rolls approaches with no audible sign of its power and speed, and passes in a swift silent rush, so that one is hardly aware that it is doing more than 20 m.p.h. The motor cycle proclaims to all and sundry by the high screech of its valve gear, the grinding of its gear box, and its reverberating exhaust, that it is doing 50, and probably imagines it is doing 60 m.p.h.

Is this necessary? Personally, I would willingly pay an extra twenty-five to thirty guineas and sacrifice 10-15 m.p.h. from the maximum speed of any motor cycle for the silence of any medium-priced car, much more for the dignified and deceptive silence (to the police as well as others) of a Rolls, a Daimler, or a Lanchester.

When so much care and designing skill go to the production of such machines as the Sunbeam, A.J.S., Brough Superior, and Norton, all of which can give a performance equal to that of a Rolls in speed and hill-climbing power, why is it that they cannot compare in the matter of silence?

I am sure that there are many of like mind with myself, and that an enormous market awaits any manufacturer who can supply this want, even at a slightly greater cost and lesser performance, provided he does not impair the reliability one expects from the modern motor cycle.

I should like to hear other readers' views on this subject, and also their opinions as to which is the most silent machine at the present time.

As you are once more reopening your campaign for physical comfort, will you not endeavour to obtain for us mental comfort as well—in the form of silence?

Fermoy.

THE OWL

POLICE PREJUDICE AND THE SWISS SIX DAYS.

Sir,—As there seems to exist some misapprehension on the above-named subject in England, I feel prompted to say that conditions for touring in Switzerland are not half as bad as your correspondents and many others seem to imagine. I have always found the police very tolerant, and, besides, policemen are few and far between out in the country, and police traps do not exist at all. Of course, the general population want that the authorities here insist on reasonable and considerate driving, which I find only right. Also speed limits of 4-5 kilometres do not exist at all. The smallest I have come across yet was 10 kilometres (about 6½ m.p.h.), and these only through towns and villages. There is at present a lot being done by motoring and other interested circles to bring about the abolishing of Sunday afternoon prohibition, but what will come of it nobody knows just yet.

So, considered generally, and with a bit of care in driving, Switzerland, with its grand and ever-changing scenery and beauty spots, is still a very attractive touring ground for foreign visitors on motor cycles and cars, and I can assure my British colleagues that on the occasion of the International Six Days, as well as on all other opportunities, they will always find a most sportsmanlike and hearty welcome here.

Sursee, near Lucerne.

WINDY.

JOURNAL BEARINGS FOR HUBS.

Sir,—May I have the pleasure of quoting a statement made by the Pelican Engineering Co. in a recent issue:

"It is simply a matter of finding a ball race of the same outside diameter as the hub shell, and having fitted the races, hub troubles end."

This is a very serious statement, as in most cases this is when the trouble starts, for an application of journal bearings under road conditions requires far more consideration than as stated above.

Generally, in a conversion of this type an under-sized ball journal bearing would be used; thus the bearing is put under conditions which it was never designed to carry out.

The following sketch (fig. 1) was made up from a friend's front wheel (3½ h.p. mount). Now the standard ball journal bearing that would correspond to the outside diameter of 1½ in. would be of 1½ in. outside diameter × ¾ in. wide × ¾ in. bore, and could be efficiently mounted as in fig. 2, but this type of bearing is only suitable for "light steady loads as on small electric fans and spinning spindles, and is not

designed to carry any journal load to speak of." This is a statement made by the manufacturers, therefore if the designer only recommends this type of bearing for light steady loads, such conditions as are found on the road would surely ruin it in a short time.

STANDARD SMALL TYPE					
DIAM OF BORE	1/8"	5/8"	3/4"	7/8"	1"
OUTSIDE DIAM	1 1/8"	1 3/8"	1 5/8"	1 7/8"	2"
THICKNESS	1/4"	9/32"	5/16"	3/8"	3/8"

Fig. 1.

STANDARD MEDIUM TYPE					
DIAM OF BORE	1/4"	3/8"	1/2"	5/8"	3/4"
OUTSIDE DIAM	1 5/16"	1 1/2"	1 5/8"	1 13/16"	2"
THICKNESS	9/16"	9/16"	5/8"	5/8"	11/16"

Fig. 2.

May I mention that my statement is based on a conversion such as stated by the Pelican Engineering Co., and not on a new hub design for journal bearings, as a detachable spindle can be very easily incorporated, leaving the bearings and wheel all one unit. I have at present a design of this construction, but using roller journal bearings, which I must say is very satisfactory and most efficient.

Reddish.

ACME.

WHERE ARE THE SPRING FRAMES?

Sir,—The question asked by the correspondent in your issue of July 7th, under this heading, seems rather to suggest that he is not among the keenest of observers. Spring-frame machines, whether in the lighter types or heavy sidecars, are on the roads in sufficient numbers to be seen without any trouble at all. Of course, seeing that the spring frame is a comparatively recent development, it is only to be expected that machines of this category should, at present, be considerably outnumbered by rigid mounts.

Another factor is that spring frames have hitherto involved additional cost, and probably a good proportion of riders have been compelled to deprive themselves of their undoubted advantages on grounds of economy in first cost. As against this, it may be remarked that the use of a spring frame has been shown materially to lessen running and upkeep expenses, so that the extra initial outlay is sooner or later recouped.

Given a reduction in prices, however, bringing the cost of a spring frame machine down to the level of the most ordinary rigid type—a movement that has already been initiated—the only remaining reason for using an unsprung motor cycle will disappear. Bitter experience—and commonsense—overwhelmingly suggest that the motor cycle should not continue to share with the pedal cycle the distinction of giving to its rider less protection against road shocks than anything that goes on wheels.

FRED A. COULSON.

F. ASLETT-COULSON ENGINEERING CO.

Sir,—“Old Timer,” in your issue of July 7th, inquires where the spring frames are. Most riders, I imagine, are not convinced of a necessity for isolating engines from road shocks, and realise that spring seat pillars and such saddles as the Tan-sad No-hurts give the driver the comfort of a spring frame without the complications and liability to trouble inherent in the additional mechanism of a spring frame.

I personally am much more interested in front fork design. I should like to know the justification for the Triumph type of fork. I allude to all forks hinged at the foot of the steering column in such a way as to allow the wheel a circular back and forward motion round the hinge, a movement calculated in my uninstructed mind to accentuate rather than to absorb road shocks. Yet its incorporation in recent machines, e.g., the XL, Hawker, Beardmore Precision, suggests that there may be something to be said in defence of this type. At the same time it is significant that the T.T. Triumph machines were fitted with the parallel link type of fork.

Barlinnie.

WARUM.

Sir,—In reply to "Old Timer's" query in your issue of July 7th concerning the absence of spring framed machines, if my case is the example of the average spring framed machine, I am not in the least surprised that we see so few about nowadays.

As I live in the Manchester district, where good roads are only dreamt of and paid for, I decided to buy a spring frame machine. I was still feeling very shaken after riding a 2½ h.p. 'bus fitted with 2½ in. tyres. So, last September, I chose one of the best spring framed machines going, for which I paid a ridiculously high price. The machine ran perfectly for a few weeks, but then troubles arrived thick and fast! Naturally a spring frame needs oiling very frequently. The only means of injecting oil was through microscopic holes, without dust caps! After these had been discovered, it became obvious that no oil could possibly soak through the solid plug of mud which had found its way there. After much trouble and expense grease cups were fitted. Soon after this lateral play became evident, making the machine rather dangerous at speeds over 30 m.p.h.

Now I would like to say a word in fairness to English manufacturers against Mr. Mursell's letter in the Overseas Section, June 30th, p. 822. He states that the only English agency in Geneva is that of the Hobart. I fear he would have a rude surprise if he took a walk to the Rue Muzy, Geneva. Here two very enthusiastic and enterprising brothers hold agencies for Nortons, New Imperials, and Omegas. They also "race" these machines, with great success, and have sold many of the first two mentioned. Also, I know there are agencies here for Triumph, Zenith, Scott, B.S.A., and Douglas motor cycles. Also, I consider the 3½ h.p. machine by far the most suitable for average touring purposes here, as the roads are too bad and the hills too long for a 2½ h.p. 'bus. English quality is realised here!

Hoping you will find space for this protest against an unjust statement,

Geneva, Switzerland.

S. N. TURNER.

PAINSTAKING MODERNISATION.

Sir,—I enclose a photograph and a few details of an old 1½ h.p. Motosacoche that I have modernised. Being a moulder by trade, and model engineering being one of my hobbies, I have effected the alterations myself. I became a motor cyclist early in 1919, and, securing a good conditioned 1914 3½ h.p. Premier, have since then been a regular reader of *The Motor Cycle*, and look forward to it each week.

Much painstaking work has been carried out on this modernised Motosacoche by "A.R.," who describes his efforts in the accompanying letter.

Coming across an old 1½ h.p. Motosacoche some time ago, which I bought cheaply, I decided to improve it if possible. I discarded the side shields and cut away the triangle frame, clipping the tank to the top tube. The oil reservoir I fixed to the side of the tank. I scrapped the accumulator ignition and substituted a T.B. magneto, the platform for it being of aluminium, and acting as an extra clip between the engine and the frame. The 2 to 1 gears are made in phosphor-bronze, the small pinion on a steel pin being driven into the end of the crankshaft. The larger pinion is riveted to the chain sprocket on a sleeve that revolves on a pin screwed into the original gun metal plate that carried the contact breaker mechanism, which, being eccentric, allows of chain adjustment. I replaced the old carburetter by an Amac having an adjustable jet. The pedals were dispensed with, the bottom bracket carrying a countershaft for a chain-cum-belt

drive. The axle was extended to take the chain wheels on one side and the belt pulley on the other. The belt pulley itself was made from sheet steel plates, dished with an aluminium boss cast on for lightness. Of course the back wheel had to be reversed.

A foot brake was fitted to act on the belt rim, an aluminium bracket clipped by a U bolt holding the footrests to the back forks. The chain sprockets were made from steel blanks, turned, and holes drilled round the blanks to form the teeth, the surplus metal being filed away; then the wheels were hardened.

The gear is about 6½ to 1, and I found it necessary to employ a tension pulley to take up chain slackness; also chain guards are being fitted. The results are very satisfactory, and the machine runs well and will climb a fairly good hill.

Wellington.

A.R.

PETROL CONSUMPTION.

Sir,—May we beg a little space to reply to Mr. C. G. Vokes's letter in a recent issue, as this gentleman appears to be under some misapprehension. The two machines which we submitted to an A.C.U. observed consumption trial were fitted with Senspray carburetters, and the results were 164 and 226 m.p.g. respectively. The former was an absolutely standard machine selected by the A.C.U.'s engineer from our stock at random, and was not tuned in any way. The one that did the greater mileage was an equally standard machine, but we ourselves did a little tuning to the carburetter. A rather smaller jet was fitted, as we were aware of the steepest gradient on the course which was used, and were able to de-tune the machine slightly accordingly.

The 300 m.p.g. to which your correspondent refers was not obtained by us at all but by Messrs. Amac, Ltd., using the 226 m.p.g. machine referred to above, and fitted with one of their carburetters specially tuned for the occasion. We believe that their actual figures were 320 m.p.g. in the observed test, but we know that Messrs. Amac, Ltd., did obtain 361 m.p.g. privately on a day when the conditions were rather more favourable than on the day the actual test was held.

Mr. Vokes may not be aware that we are giving a petrol consumption guarantee of 120-150 m.p.g. with our standard single-gear models. To our knowledge, quite a number of our riders are getting considerably more, which is quite comprehensible in the case of machines in a flat district, ridden by light enthusiasts, who drive their machines intelligently.

We may say that when considering entering the aforementioned tests we purposely refrained from entering a special machine with freak tuning, as we are well aware that the exceptional figures which can be so obtained under favourable conditions are not believed by the majority of riders.

W. S. BANNER,

FOR BUTTERFIELDS LIMITED.

BOOKS AND MAPS FOR MOTOR CYCLISTS.

Issued in conjunction with *The Motor Cycle*.

"MOTOR CYCLES AND HOW TO MANAGE THEM"

The standard handbook on the motor cycle.

Price net, 2/6. By post, 2/10.

"HINTS AND TIPS FOR MOTOR CYCLISTS."

New Edition. Just Published. Priced net, 2/- By post, 2/3.

"TRACING MOTOR CYCLE TROUBLES."

A system for tracing motor cycle faults and of remedying them when found. Fourth Edition.

Price net, 2/- By post, 2/3.

"TWO-STROKE MOTOR CYCLES."

A reliable treatise on Two-strokes from the rider's point of view.

Price net 3/- By post, 2/3.

"MOTOR CYCLE REMINISCENCES."

By "Ixion," of *The Motor Cycle*.

Price net, 5/- By post, 5/3.

"THE MOTOR CYCLE" ROAD MAPS.

Set of Three Maps—England and Wales, Scotland, London. Set of three, complete in case. Price net, 5/6.

Book post, 5/10. Set of Two Maps—England and Wales, London (as above). Price net, 4/6. By post, 4/8.

"THE MOTOR CYCLE" ROUTE BOOK.

With 32 pages of Road Maps. Price net, 5/- By post, 5/4.

Obtainable by post (remittance with order) from ILLIFF & SONS Ltd., 20, Tudor Street, London, E.C.4, or of leading Booksellers and Railway Bookstalls.

QUESTIONS AND REPLIES

A selection of questions of general interest received from readers and our replies thereto. All questions should be addressed to the Editor, "The Motor Cycle," 20, Tudor Street, London, E.C.4, and whether intended for publication or not must be accompanied by a 2d. stamped addressed envelope for reply. Correspondents are urged to write clearly and on one side of the paper only, numbering each query separately, and keeping a copy for ease of reference. Letters containing legal questions should be marked "Legal" in the top left-hand corner of the envelope, and should be kept distinct from questions bearing on technical subjects. ROUTES.—By special arrangement with the Automobile Association and Motor Union, readers of "The Motor Cycle" desiring routes may enjoy the benefit of the Road Service Department of that organisation. Queries should be addressed to the Editor in the ordinary way (enclosing a 2d. stamp), and will be dealt with by the A.A. and M.U., who are regularly in receipt of reports from their representatives all over the country as to the existing state of the roads in any particular locality.

A QUESTION OF BALANCE.

(1.) On dismantling my W.D. Triumph engine I find that some of the lead weights in the flywheels are missing, namely, the four nearest the connecting rod—two in each wheel. Should this be so? (2.) Should I replace them?—G.L.S. and 2.) The weights are omitted for balancing purposes, and they should not be replaced.

LICENCE FOR SALE OF PETROL.

Is any licence required before commencing to deal in motor spirit?—G.H. You require a licence to deal in motor spirit, and you can obtain one from the nearest collector of Customs and Excise. It will also be necessary that you have properly constructed and licensed motor spirit store. You will be able to obtain information regarding this from the collector's office of your county.

MISFIRING ABOVE 25 M.P.H.

Some months ago I purchased a 2½ h.p. 1920 Douglas, and for about the first ten days was able to run on full air. Later, however, the engine commenced backfiring and missing, and I found the only remedy was to shut off my air until it was about a quarter open only. I am still experiencing the same trouble, and have tried every remedy I can think of. I have bound the joints of the induction pipe with adhesive tape, but with no result. I am using a 25 jet, and if I try a larger the cycle takes less air than ever. Up to about 25 m.p.h. it takes full air, and only when I open the throttle beyond this have I to shut off the air almost completely. As a result of this trouble I am only getting about seventy miles to the gallon, which is far too little. I can discover nothing wrong with the carburetter?—G.R.F.

The machine now refuses to take extra air beyond a certain throttle, it would appear that there is some restriction in the fuel supply; this may be between the carburetter and the jet platform, or in the jet itself. You should dismantle the carburetter and thoroughly clean them, specially noting the state of the filters in the petrol tank and float chamber union. We assume that the sparking plugs are in good order; a broken inlet valve spring often causes erratic running even when it does not stop the engine. The consumption of our machine is not excessively high.

AGE QUALIFICATION FOR DRIVING LICENCES.

What is the minimum age of persons to whom licences for driving motor cycles may be issued?—A.J.N.

A motor cycle driving licence is issued to anyone over the age of fourteen years.

FRAME MODIFICATIONS.

My 3½ h.p. Triumph, of rather old type, has a straight top tube. I wish to lower the saddle position, but I am unable to get anyone to undertake the job. Is it possible for me to bend the tube without breaking it, and which is the best way to loosen the tube joints?—H.W.B.

Unless you have access to a brazing hearth, and have had considerable experience in frame building, we do not advise you to attempt the frame alteration yourself. The existing frame lugs are pinned and brazed, and the necessary heat to loosen them may easily damage the tubes if carelessly applied.

PROTECTING A MAGNETO.

Is it possible to make my old type Bosch magneto weather-proof by fitting end plates of aluminium and having a small bolt made of the same material going through the magnets, thus pulling them close to the latter? (1.) What insulation should I require between end plate and magnets, also bolt? (2.) Would insulating tape be good enough? (3.) Would there be any harm whatever done to the magneto by the aluminium bolt going through the magnets? (4.) What would be the best material to make nuts of for ends of bolt?—A.A.D.

The arrangement you suggest would do very little to protect the magneto, and one of the rubber covers sold by the accessory dealers would be far more effective. (1 and 2.) It would not be necessary to place any insulation between the end plates and the magnets. (3 and 4.) There is no necessity to use an aluminium bolt; steel would do.

In spite of the bother entailed in a sea passage, a large number of motor cyclists choose the Isle of Wight for their holidays, although their runs must necessarily be circumscribed. The illustration depicts a scene on one of the cross-Channel steamers during the Cowes regatta week.

A SINGLE-TRACK CAR WANTED.

? As a reader of your paper, I should be pleased if you could tell me why the single-track monocar or cycle car on motor cycle lines has not made its appearance, as it obviously has so many advantages over the motor cycle and the monocar, yet one never hears of one having been built or experimented with. Of course, for traffic and slow running, I suggest that two wheels should be let down each side of the body by a lever controlled from the seat, and the steering should be by cables running over pulleys from very short handle-bars about 2ft. wide to a control of the Maurice Farman aeroplane type, or another pair of handle-bars on the dashboard.—D.S.

Vehicles designed upon the lines you suggest have been tried in many cases, and experiments have never been brought to a successful end. Obviously such a machine would have great disadvantages, except upon good wide roads. In congested traffic, or where the road surface was very bad, such a machine would be positively dangerous, as the driver is in a helpless position. Moreover, in many cases, it would be impossible to bring the subsidiary wheels into operation sufficiently quickly to avert disaster.

TIMING AN A.I.V. ENGINE.

? Having recently taken over an old machine with automatic inlet valve, will you kindly put me right as to the timing of the valves and ignition? I have timed it as follows: Piston top dead centre, contacts just about to open. (I am using an old twin magneto with one brush and one cam removed. Is this right?) I get a good shock from the magneto, but no spark at the plug, which is a new one. There is a screw missing that holds the contact breaker to the armature. What difference will this make?—E.A.G.

(1.) In the case of an automatic valve engine, the exhaust valve only has to be timed. Set it so that it is just closing as the piston reaches the top of the stroke. The spark should occur on the top dead centre of the compression stroke when the ignition control is two-thirds retarded.

(2.) There is no reason why the magneto should be unsatisfactory when used on a single-cylinder engine if you have removed one brush and one cam, but the remaining cam should be lengthened so that the points are kept open for at least 180° of revolution. It is absolutely essential that you do not remove the contact breaker centre screw, as this provides the lead for the primary current to the insulated portion of the contact breaker.

EXPERIENCES WANTED.

Readers' replies to questions published under this heading should be sent to the Editor, "The Motor Cycle," Hertford Street, Coventry, when they will be forwarded direct to the querists concerned.

"J.H.E." (Bristol).—Bowden extra air inlet on 4 h.p. Douglas.

"N.N." (Masham).—Binks carburetter on 8 h.p. Matchless-Jap. Consumption, starting, jet sizes.

"K.C.B." (Knutsford).—3½ h.p. Rudge Multi especially hill-climbing.

Important Dates.

Fri., Aug. 12th—Motor Cycle Grand Prix in Belgium.

Sat., Aug. 13th—Cumberland M.C.C. Open Reliability Trial.

Sat., Aug. 20th—Western Centre A.C.U. Open Speed Trials.

Thurs., Aug. 25th—Ystalyfera and Carmarthen M.C.C. Open Speed Trials.

Mon., Aug. 29th, to Sat., Sept. 3rd—A.C.U. Six Days Trial.

Thurs., Sept. 8th—Norfolk M.C. and L.C.C. Open Speed Trials.

Sat., Sept. 10th—North-Western Centre A.C.U. Open Speed Trials.

Sat., Sept. 17th—Grand Prix Race for Cycle Cars.

Fri., Sept. 23rd, to Tues., Sept. 27th—Anglo-Dutch Reliability Trial.

Sat., Sept. 24th—M.C.C. Sporting Trial.

Mon., Nov. 28th, to Sat., Dec. 3rd—The Olympia Motor Cycle Show.

READER'S REPLY.

HIGH PETROL CONSUMPTION.

Referring to "F.C.W.'s" query in the issue of the 28th ult., I notice that you consider a 25 jet quite small enough for a 2½ h.p. two-stroke; perhaps you will be interested to learn that I am successfully using a 23 jet in the Amac carburetter, on my 1920 2½ h.p. Ivy, with most satisfactory results. I get 120 to 130 m.p.g., averaging about 20 m.p.h.—A. E. GORDON.

RECOMMENDED ROUTES.

LOUGHBOROUGH TO BURLINGTON LANE.—H.S.G.

Loughborough, Leicester, Oadby, Kibworth, Market Harborough, Brixworth, Kingsthorpe, Northampton, Hackleton, Stoke Goldington, Gayhurst, Newport Pagnell, Woburn, Hockliffe, Dunstable, Markyate, Redbourn, St. Albans, Radlett, Elstree, Bushey Heath, Harrow and Wealdstone Station, Sudbury, Ealing Common, Gunnersbury Avenue, Turnham Green Church, Chiswick Station, Burlington Lane. Approximately 111 miles.

HALIFAX TO HIGHGATE.—W.E.H.

Halifax, Doncaster, Wadworth, Tickhill, Oldcoates, Carlton, Worksop, Welbeck Abbey, Cuckney, Market Warsop, Mansfield, Nottingham, West Bridgford, Plumtree, Normanton-on-the-Wolds, Widmerpool Inn, Six Hills Inn, Thurmaston, Leicester, Oadby, Great Glen, Kibworth, Market Harborough, Brixworth, Kingsthorpe, Northampton, Hackleton, Stoke Goldington, Gayhurst, Newport Pagnell, Woburn, Hockliffe, Dunstable, Markyate, Redbourn, St. Albans, Highgate. Approximately 200½ miles.

KIDDERMINSTER TO WINDERMERE.—W.A.L.

Kidderminster, Quatt, Quatford, Bridgnorth, Stockton, Norton, Brocton, Shifnal, Crackley Bank, Newport, Hinstock, Ternhill, Bletchley, Sandford, Whitchurch, Beeston Castle Station, Tarporley, Cote Brook, Cuddington Station, Weaverham, Acton Bridge, Stretton, Warrington, Sankey Chapel, Bold, Clockface, St. Helens, Rainford, Ormskirk, Burscough Bridge, Rufford, Longton, Penwortham Bridge, Preston, Garstang, Lancaster, Slyne, Bolton-le-Sands, Carnforth, Beecham, Milnthorpe, Levens Bridge, Kendal, Windermere. Approximately 174½ miles.

New Avon Home in London.

The Avon India Rubber Co. has moved into large and splendidly equipped premises at 343, Euston Road, N.W.1.

Really Helpful Hints.

Again "Rudge Wrinkles" runs in another edition, this time embodying details relating to the new three-speed chain-driven gear box models. This particular handbook has long been regarded as just what a maker's instruction booklet should be, and every Rudge rider needs one by him. Some useful hints on gear changing with the three-speed gear box will be useful to users of any make three-speed machine.

A Tempting Offer.

Riders who have hesitated to install any of the new lighting and ignition systems on account of the scrapping of the existing magneto will be attracted by this offer in connection with the M-L Maglight outfit for singles and flat twins, where a generous allowance is to be made for the discarded magnetos off the first 20 machines converted.

Two-stroke Tips.

A very thorough handbook, combining with spare parts list, dealing with the running of the 2½ h.p. Royal Enfield two-stroke, has just been issued. It is keeping with all the excellent instructional matter previously prepared by the Enfield Cycle Co., Ltd.; and users of the machine mentioned who are without a copy in their garage should send a request to Redditch forthwith.

Catalogues Received.

Wright and Son, Edgware, Middlesex. Aluminium number plates pressed from the sheet are a speciality described in folder issued by this firm, which also produces a low-priced pressed aluminium licence holder. The idea of embossed number plates is also extended to an enormous variety of name, door, and direction plates.

Successes in the Grand Prix.

Speedwell oil promises to become popular in France as in England, "sir" Jean Vernisse used Speedwell lubrication on his 250 c.c. Yvels-Jap when he won the lightweight class in the Grand Prix as also Clech (Moto Solo), who finished second.

Found.

Found, near Liverpool, a sidecar holder cover. Editor has address of finder.

Found on Bucklebury, near Settle, Yorks, a haversack belonging to a Scottish rider, by Mr. E. Lucas, 23, Stanleyfield Road, Preston. Also a tool roll at Moultham Heath, Cheshire, by Mr. T. E. Holbert, 33, Whalley Street, Gorton, Manchester.

Chelmsford M.C.C.

Local motor cyclists interested in a proposed club, as above, should communicate with Mr. J. Day, Friars Place, Chelmsford.

Prestwich M.C.C.

Only formed a month ago, the membership of this club already tops the hundred. The headquarters are at Messrs. V.I. Taylor and Co., Ltd., motor engineers, Sedgely Park.

Berwick and District M.C.

The speed trials held in Belford were a great success. The awards were as follows:

1st MACHINE (up to 350 c.c.).—1. J. W. Tweedmouth (2½ Jap-Imperial).
2nd MACHINE (Unlimited c.c.).—W. Murray (Sports Sunbeam).
3rd CARS AND CARS (Unlimited c.c.).—G. G. Nelson, Kirknewton (8 Sunbeam sc.).

Harper Adams College M.C.C.

There were several unusual events at the first "motor cycle sports" meeting of this club. These included a long jump the winner "jumping" 19ft. off a rise of 5ft., with fifty yards start) and a plank. The results were:

1st PRIZE AND CHALLENGE CUP.—C. Carr (4 Harley-Davidson).
2nd PRIZE.—R. G. Posnett (3 A.B.C.).
3rd PRIZE.—A. F. Gatehouse (2½ Douglas).
As E. Cholmondeley (the only lady competitor) rode her machine with great skill.

Wilmington and District M.C. and L.C.C.

Only twelve out of twenty-one entrants finished the course in the recent half-day sporting trial over a stiff course of approximately 70 miles. Allan O. Gruzelier (½ Smith-Bradshaw) made an outstanding performance on all the hills, but unfortunately his watch stopped, and he was consequently late at the first Results:

1st CUP AND MEDAL.—G. Gilbertson (5 Brough).
2nd MEDALS.—R. A. Green (3½ Norton), 24 marks, and A. B. Lavy (3½ Sunbeam), 93 marks.

Week-end Club Events.

- Aug. 11.—Doncaster and District M.C.C. Speed Trials.
- Aug. 11.—Canterbury and District M.C.C. Club Run to Dymchurch.
- Aug. 11.—Taunton and District M.C. and L.C.C. Treasure Hunt.
- Aug. 11.—Warcester and District M.C.C. River trip.
- Aug. 11.—Ulster M.C.C. Hill-climb.
- Aug. 13.—Leeds and District M.C.C. Gymkhana.
- Aug. 13.—Helensburgh M.C.C. Hill-climb.
- Aug. 13.—Saltsheats and District M.C.C. Club Run to Kilmanning.
- Aug. 13.—West Kent M.C. Flexibility Test on Brasted Hill.
- Aug. 13.—Luton and South Beds A.C. Hill-climb.
- Aug. 13.—North Wales M.C.C. Silencer Trial.
- Aug. 13.—Wallington and District M.C.C. Hill-climb.
- Aug. 13.—Liverpool M.C. Hill-climb at Pen-y-Ball.
- Aug. 13.—Public Schools M.C.C. Reliability, Brake, and Acceleration Trial.
- Aug. 13.—Stourbridge M.C.C. Gymkhana.
- Aug. 14.—Ilkley M.C. and L.C.C. Wilkinson and Armitage Trophy Trial.
- Aug. 14.—Stafford and District M.C.C. Captain's Run.
- Aug. 14.—Barrow and District M.C.C. Reliability Trial.
- Aug. 14.—Manchester M.C. Gymkhana and Social.
- Aug. 14.—Leeds and District M.C.C. Club Run.
- Aug. 14.—Leeds M.U. Reliability Trial.
- Aug. 14.—Harrowgate and District M.C.C. Social Run to Hawaby.
- Aug. 14.—Wolverhampton Auto Nomads. Club Run to Haughmond Avenue.
- Aug. 14.—Sheffield M.C.C. Club Run to Lincoln.
- Aug. 14.—Northern M.C.C. Gymkhana.
- Aug. 14.—N.E.A.A. Team Trial.
- Aug. 14.—Halifax and District M.C.C. Club Run to Buxton.
- Aug. 14.—Wolverhampton M.C.C. Social Run to Ross.
- Aug. 14.—Portsmouth and District M.C. and L.C.C. Club Run to Bramdean.
- Aug. 14.—Wakefield and District M.C.C. Club Run to Aysgarth.
- Aug. 14.—Brighton and Hove M.C.C. Secretary's Surprise Run.
- Aug. 14.—Basingstoke and District M.C. and L.C.C. Club Run.
- Aug. 14.—Woolwich, Plumstead, and District M.C. Gymkhana.
- Aug. 14.—Cambridge and County M.C. Speed Trials.
- Aug. 14.—Rochester, Chatham, and District M.C. and L.C.C. Club Run to Hever Castle.
- Aug. 14.—Exeter M.C. and J.C.C. Supper Run to Torquay.
- Aug. 14.—Central London M.C.C. Club Run to Epping Forest.
- Aug. 14.—Berwick and District M.C. Hill-climb.

Liverpool M.C.

There were forty-two starters, including four ladies, in the distance and speed-judging competition on July 27th, starting from Arrowe Hall. The prize winners proved to be:

1. F. H. Roberts (2½ Chater-Lea) and A. E. Taylor (18 Overland) tied, divide first and second prizes; 3. J. R. Worrall (2½ Douglas). Best performance by a lady, Miss P. Dorie (3½ Rudge Multit).

Cannock Chase M.C.C.

A successful reliability trial, over a varied course, was held on Monday, the 1st inst., for the president's cup. Twenty competitors started, and fourteen completed the course. The cup winner was T. E. Stone (3½ Sunbeam sc.). 3m. late, the second man being E. A. Mason (2½ Ixion). Any riders wishing to join the club should communicate with the honorary secretary, Mr. T. E. Lindop, The Green, Cannock.

Rochester, Chatham, and District M.C.C.

Five Kentish clubs in all contributed towards a very successful hill-climb held at Nosley Hill on July 31st. Electrical timing was used, and the proceedings went forward without a hitch. Some very good times were put up, the fastest time of the day (22½s.) being gained by F. Short on an overhead valve J.A.P. The length of the course was two-fifths of a mile, and the average gradient 1 in 7.

CLASS 1.—Sidecars, unlimited: 1. G. Packman (8 Brough Superior), 30½s.; 2. H. Chalklen (7-9 Harley-Davidson), 32½s.; 3. J. Redtail (7-9 Indian), 40s.

CLASS 2.—350 c.c. (general): 1. W. Rumens (3 Ivy), 30½s.; 2. G. Williams (2½ Douglas), 32½s.; 3. S. Stockwell (2½ Hobart), 36½s.

CLASS 3.—350 c.c. (experts barred): 1. S. Stockwell (2½ Hobart), 31½s.; 2. Watson (2½ A.J.S.), 51s.

CLASS 4.—600 c.c. (general): 1. Newman (3½ Sunbeam), 24½s.; 2. Smart (3 A.B.C.), 28½s.; 3. W. Rumens (3 Ivy), 28½s.

CLASS 5.—600 c.c. (experts barred): 1. L. Williams (3½ Scott), 29s.; 2. Frear (3½ Scott), 30½s.; 3. Ekersley (3½ Duzmo), 31½s.

CLASS 6.—Unlimited (general): 1. J. Short (8 J.A.P.), 22½s.; 2. Newman (3½ Sunbeam), 24½s.; 3. G. Packman (8 Brough Superior), 26½s.

CLASS 7.—Unlimited (experts barred): 1. J. Short (8 J.A.P.), 22½s.; 2. Igoulden (7-9 Indian), 25½s.; 3. Redtail (7-9 Indian), 26½s.

CLASS 8.—600 c.c. touring machines: 1. Smart (3 A.B.C.), 28½s.; 2. Wallis (3 A.B.C.), 31½s.; 3. Cousins (4 Triumph), 34s.

A Section devoted to Club Announcements will be found on Supp. xxxviii.

The INTERNATIONAL Six Days Trials in Switzerland.

In the neighbourhood of Giornico in the canton of Tessin, near the St. Gothard Pass. Competitors passed this spot on the fourth and fifth days.

British Machines make Creditable Performances on Severe Gradients in High Altitudes

ONLY two teams competed for the International Trophy in last week's Six Days Trial (promoted by the Swiss Motor Cycle Union for the F.I.C.M.), viz., Great Britain and Switzerland. There were fifty-one entrants, and all faced the starter at Geneva on Monday.

Gorgeous scenery and long, tiring gradients were the chief characteristics of the trial. Imagine Applecross piled on Porlock, and Sutton Bank placed on the top. Cover the whole with glorious shady woods, add a blue sky and a blazing sun, and some idea may be gathered of the lesser climbs of the trial. Of the really strenuous ascents more anon.

Fifty-one Starters.

The entry consisted of riders from England, France, and Switzerland, and machines made in England, France, Switzerland, and America. Most of the best makes figured in the trial, and the entry may be said to have been fairly representative. Two teams only entered by countries competed—the Swiss team, consisting of Morand (Condor), Rothenbach (Motosacoche), and Crax (Motosacoche), and the English team consisting of Eric Williams (A.J.S.), J. A. Newman (Douglas), and Hugh Gibson (Raleigh). Besides these the following Englishmen took part: H. Dawson (P. and M.), E. H. Lees (Sunbeam), H. Langman (Scott), C. P. Wood (Scott), and F. P. Dickson (Brough Superior), making eight British entries in all. Of the fifty-one entrants, of whom all weighed in, twenty-four rode British mounts, leaving twenty-seven divided between three other countries.

The organisation at the weighing in was excellent and most thorough, and took place in the Bâtiment Electoral, one of the finest buildings in the beautiful town of Geneva. Every conceivable part of the machines and each bundle of spare parts carried was either sealed or stamped, while particular attention was paid to silencers, every cut-out being sealed in its closed position.

Altogether the exhibition of machines ranged in order in the centre of the hall was a fine one, and to it the public were admitted, and arrived in a steady stream from 8 a.m. Several of the machines attracted much attention, perhaps the most prominent being one of the French mounts, the unconventional Viratelle, with water-cooled, enclosed valve, side-by-side twin-cylinder engine, forming a unit with the gear box, laminated spring forks, and a radiator circular in form, carried in front and provided with a belt-driven fan. The Blériot, too, raised much comment; it is perhaps a shade better known in England, but this is the first important trial in which the former has competed.

Swiss Entries.

Among the Swiss makers, the neatly equipped M.A.G.-engined Condor made a very favourable impression. The Motosacoche had all spring frames, while the sidecar machine of this make had an Enfield type gear, but giving three speeds. The Condor sidecar outfit had a M.A.G. engine, but a three-speed gear box. One machine better known in England a few years ago than now—the Moto-Rève—had an overhead valve V twin engine and the Enfield type of gear also.

Every official spoke fluent English, all seemed bent on doing their utmost to help the foreign visitors.

Of the British officials, Mr. T. Loughborough, secretary of the F.I.C.M., Mr. W. H. Wells, representing the A.T.A., and Mr. E. M. P. Boile, British delegate of the F.I.C.M., at a conference held last Monday at Geneva journeyed by road, while Mr. A. V. Ebwhite, the other British delegate of the F.I.C.M., and, like Mr. Loughborough, one of the stewards of the trial, arrived before the start and followed the competition. Though it was fully expected they would take part, the French and Italian teams failed to materialise.

FIRST DAY.—GENEVA TO CHAUX-DE-FONDS, 193 MILES.

The first day's run was not too long and was comparatively easy. The competitors were despatched from the Bâtiment Electoral at Geneva six at a time and at one-minute intervals. It was a perfect morning, heralding a hot day, the competitors sallied along the excellent and mostly dustless road which skirts Lake Geneva. After Nyon the lake was left, and then ensued a long climb up St. Cergues up a zigzag road, which, though long, gave little trouble except to one of the French machines.

On our way to Marchairaz, the observed hill, we had some little excitement. En route we passed a sentry-box in which sat a soldier in a brilliant uniform. We slowed down, and were called to proceed, and all went well after climbing about five miles, we found the road barred, where we were informed

A scene at Chaux-de-Fonds. Emile Gafner (Indian) getting away, and E. H. Lees (Sunbeam) at the timekeeper's table. Observe the fireman with his hatchet and metal helmet.

that we had passed through an artillery range, and had narrowly escaped being shelled. Soon after a series of rapid shots added emphasis to our informant's remarks.

The First Test Hill.

Ascending from the lake, the view should have been glorious, but the heat haze spoilt it, and Mont Blanc could only just be discovered, barely visible, a white ghost mountain. We took up our

post on the observed hill at an altitude of well over 4,000ft., much higher than the top of Snowdon, where the gradient was about 1 in 8, but the summit was close on 4,800ft. This is not among the Alps proper, but only in the Jura district. Nevertheless, twice on the first day the competitors climbed to heights exceeding that of Applecross.

The first arrival was Lombard, on the *monobloc* four-cylinder Salmson water-cooled cycle car, who travelled well.

Georges Neher, on the 500 c.c. Motosacoche, came up in fine style, but later suffered from carburettor trouble. While watching the competitors, a workman arrived on a 2½ h.p. F.N., in which he had fitted an enclosed fan running on ball bearings, and driven by a belt off the fly-wheel for inducing an air draught on to the cylinder head. M. Jules Neher, who was following the trial on a Morgan, came up in fine style. Despite the length of the hill, and the fact that it was very steep near the summit, it caused little trouble to the competitors. Wood and Langman (on Scotts) simply played with the gradient, while Gibson (on the Raleigh sidecar) made an extremely good climb. Laeser (on a 2½ Condor) came up well, but made a poor change at one of the corners, while Morand (on one of the miniatures of this make) did well, though his mount was somewhat noisy. Willemin (another Condor rider) wore a sort of waterproof Balaklava helmet, which might have been ideal in rain, but must have been extremely hot. Pognanski (7 A.J.S. sc.), who was one of the last to arrive in Geneva before the start, was sailing under British colours, and brought the total number of British entries to nine. His machine and Eric Williams's 2½ h.p. of the same make made fine ascents. Gafner (on an Indian Scout) made easy work of the climb, but his trouble was to come later. Gex (Motosacoche sc.) ascended with his passenger leaning far out of the sidecar.

English Machines Climbed Well.

Boltshauser and the other Triumph riders did well, and so did the Nortons, except that ridden by Tschndi, who arrived late and was making up time. All the Englishmen were doing excellently, and Lees (Sunbeam), though he

Well-known riders at Schaffhausen on the third day's run. Reading from left: H. Langman (Scott), Hugh Gibson (Raleigh), Eric Williams (A.J.S.), and J. A. Newman (Douglas).

The International Six Days Trial.—

has been doing much car work lately, had, by the way he took the corners clearly, lost none of his old skill. Dawson's P. and M. made quite a good climb, and so did Schlee's 2½ h.p. Douglas and Newman's 3½ h.p. of the same make.

Swiss Team's Loss of Marks.

After the summit, the road descended rapidly, and eventually skirted the pretty little Lac de Joux, its blue waters sadly diminished by the drought. At the end of the lake came a short section of mountain road, and then a steady fall to Vallorbes—the luncheon stop. Here it was reported that the Swiss team had already lost marks, and Gex, the crack Motosacoche rider, was reported to have stopped more than once on Marchairnz; the Englishmen were still intact, but the climb had but just begun. Bailly (Hobart) and Gafner (Indian Scout) were in trouble with their tyres, the latter having suffered a ripped tube.

After lunch the worst climb was the Col de l'Aiguillon, some time after which the road descended to the shores of the Lake of Neuchatel, and then ascended to the Vue des Alpes, but there was no view on account of haze. It was a long

Days Trials, and Gibson felt that he had already learned a great deal. In his own words, he had actually melted two plugs, had three punctures in a ten-kilometre section, and had lost no marks. Dickson (Brough Superior) had been unable to descend a single long hill without sooting his plugs. Lees (Sports Sunbeam) had seized his engine, owing to bad oil, but had freed it again. Eric Williams (2½ A.J.S.) was merry and bright; while Dawson (P. and M.) had had three punctures in the last ten kilometres, and had "blinded" to make up time, broke an exhaust valve as a result, and lost seven marks.

One Retirement First Day.

Of the fifty-one starters there was only one retirement—Balmer, the French rider of the Blériot. Bailly (Hobart) lost marks owing to tyre troubles, and Gex (Motosacoche) through broken high-tension wire. Balmer (Blériot), however, could not get his engine to start for an hour after the word to go was given on the second day, and so had to withdraw.

let go, when Gibson and his companion came along, and swiftly hauled the outfit back to safety.

To hark back for a moment to the evening before. Chaux-de-Fonds celebrated the Swiss National Fête with fireworks and illuminations, hugely enjoyed by all and sundry, save by one British official, Mr. A. V. Ebbelwhite, whose forehead was cut open by a rocket stick. Fortu-

(Left) C. P. Wood taking one of the hairpins on the Weisenstein on the first day. (Right) Typical continental architecture—the Tower at Solothurn. The car belongs to Mr. W. H. Wells, of Indian fame, who was accompanied by Mr. and Mrs. Loughborough.

trying climb, but not severe, though it rose to an altitude of 4,500ft.—higher than the summit of Ben Nevis.

Gafner (Indian Scout) ascended with his pump sticking out of his haversack. We had another exciting incident before reaching this point. Men were working on a sewer by the roadside, and pulled us up because they had laid a mine. When it did go off, it made little more fuss than a Chinese cracker.

Chaux-de-Fonds, the finish of the day's run, was but a few kilometres distant.

British Competitors' Impressions.

A chat with the British competitors at the end of the first day's run evinced several items of interest. Newman considered the event far more entertaining than either the Scottish or English Six

SECOND DAY.—CHAUX-DE-FONDS TO BASLE, 156 MILES.

Monday's run presented few difficulties, but Tuesday's was a very different story. It was a really hard run. One of the incidents of the morning was a five-kilometre descent over a stony track, at times studded with rocks as large as paving stones—a piece of cross-country work as bad as could be found in an English or Scottish Six Days Trial, but with the agony piled on owing to its length. Several of the Swiss drivers were seen to be walking their machines down the hill, and on the way to St. Ursanne the Condor sidecar outfit was found to be hanging over the edge of a precipice, with driver and passenger hanging on for dear life, almost exhausted and ready to

nately, the injury, though unsightly, was not severe.

On the Weisenstein.

Reverting to the trial, the *pièce de résistance* of Tuesday's run was the ascent of the Weisenstein from Solothurn. It will be noticed that this is a German name, and practically marks the entry of the trial into German Switzerland. The peasants do not speak French, and their German is an unintelligible *patois*. Most of the organisers of the trial spoke English and French, so that the sudden change from one or other of these languages was not a little trying.

The Weisenstein is a good hill, and one British rider, who was fairly beaten by it, declared it to be the finest hill he had ever met. Applecross plus Porlock

The International Six Days Trial.—

plus Sutton Bank describes it. Its length is at least five miles; its surface like Sutton Bank in fair condition, and so not too bad; its average gradient about 1 in 8; and its steepest, inside the three worst corners, about 1 in 4. Like the other hills in the second day's run, it was not observed, as the course was thought to be insufficiently steep, but it had its record of failures. It is not a freak hill, for cars and motor cycles climb it every Sunday, as the view from the summit, 4,350ft., is marvellous in clear weather; but few cars will climb it without boiling furiously.

We watched the performances from the topmost bad corner, where the climb began to be serious, about 1,000ft. from the highest point. Poznanski (A.J.S. sc.) made a beautifully clean climb. The machine sailed easily round the bend, and his passenger remained normally seated. Eric Williams (2½ A.J.S.) did splendidly, and, though he had an anxious moment through taking the inside of the bend instead of taking it wide (the easier way); he made a clean recovery and a non-stop climb. By the time they reached this point, the engines were pretty hot, but Langman's, Wood's, and Alfert's Scotts came up without a falter, and the Swiss-ridden Triumphs did remarkably well. The hill proved too much for three of the little Condors, the riders of which had to dismount and run; but Laeser, riding one of these machines, made a fine climb, and foot-slogged quite unnecessarily.

Passenger Machines.

Of the cycle cars, the Salmson made a very fine performance, but the French-built G.N. had to shed its passenger, who pushed behind. Many of the sidecar machines came up with the sidecar seat either empty or with the passenger most abnormally seated. Schorp (Motosacoche

M. Jules Neher, president of the Motor Cycle Union of Switzerland, who followed the trial on his Morgan.

sc.) and Rolland (New Imperial sc.) were offenders in this respect, and failed, while other unsuccessful riders were the two 500 c.c. Motosacoche riders, Guignet and Robert. Bonvin, riding a similar machine, kicked hard on the ground, and nearly fell.

Of the solo Viratelle machines, those ridden by Lambert and Aumaitre failed, the rider of the former arriving at

the corner very much the worse for wear.

After a long rest, he had the misfortune to break his chain just as he was restarting.

Dickson (Brough-Superior) came up beautifully and smiling, as did Newman (Douglas), who took the corner a shade too wide. Lees (Sunbeam) gave a fine exhibition of driving. Of the other English riders, Gibson (Raleigh sc.) stopped simply through wheel slip, and shed his passenger. Gafner, the Indian Scout rider, came up well, but took his corner rather clumsily; but Marcel (7 Indian sc.) failed just beyond the last corner.

After this there was a good deal more of the hill, another corner not quite so bad, and a further steep stretch. The descent was rough, narrow, and severe, comprising numerous gulleys, and more stiff country was traversed before Basle was reached.

A Place of Evil Omen.

There were several incidents during the day. Fouquier (Viratelle sc.) upset his outfit on the Col des Enters (the Pass of Hell), rightly named so far as he was concerned, as his brakes failed, and he fell, breaking several ribs. Young Neher (Motosacoche) lost marks through punctures, brake, and plug troubles, while two of the British team must have lost many marks. The unfortunate Newman had a fall after the Weisenstein, and then a series of punctures which exhausted his supply of spare tubes. Exhausted by his fall, the heat, and his efforts, he lost an hour.

It will be appreciated that the trial was no picnic, and most of the English riders said they have to drive on full throttle most of the time. Gibson, though his failure on the worst hill of the day lost him no marks, feared he had been penalised owing to five punctures he suffered.

An A.J.S. rider, M. Poznanski, about to leave Rheinfell. Shirt sleeves were the order of the day. On the right is Mr. W. H. Wells, who accompanied the riders on the course.

THIRD DAY.—BASLE TO ZURICH, 213 MILES.

All those who arrived the previous night started on the third day's route, except Bischof (8 Motosacoche sc.) and Dawson (3½ P. and M.), whose fork crown broke owing to the bad roads. This day's run was not severe, except that it was long and tiring. The road was rough on leaving Basle, but improved later, and in glorious weather the competitors traversed the final hills and valleys of the Juras. There were few difficulties, except on one part of the course, where the road was traversed by numerous gulleys.

Lunch was served at Laufen, near Schaffhausen, where the men had ample time to view the falls of the Rhine, which are really worth seeing. The enclosure at the luncheon stop was approached through an arch under a sixteenth century tower. Lunch was served in a shady garden, and afterwards petrol was brought in drums and doled out first in enamelled

ing dynamo broke completely adrift, and he lost his way riding into Zurich. The final control was three kilometres away from this beautiful town.

The arrivals were grouped into parties of ten and piloted by cars to the enclosure—a fine electrically lighted building in the heart of the city. The floor was covered with sawdust, each competitor had his appointed post arranged in the next day's order of starting, his luggage was arranged on one side of the hall, and petrol and oil were set out all ready for the next day's run. The trial was certainly well organised, but the N.M.S. has still a little to learn as regards running a competition of this kind.

Dust, Wind, and More Punctures.

The only surviving Viratelle arrived with its water boiling. The Salmson cycle car lost marks owing to punctures after the start.

The men arrived covered with flour-white dust, which is not so disfiguring

difficulty experienced in these parts was to realise the gradients, and that the power fell off at high altitudes. He wished he had had a voiturette cover on the rear wheel.

The following retirements were reported on Wednesday: Aumaitre (Viratelle); Tschudi (Norton), broken push rod; Franel (Moto-Rève); and Rolland (8 New Imperial sc.), who had nine punctures on the third afternoon. These, with Dinkel (Condor sc.), who broke his handle-bars through colliding with a non-competitor on the Weisenstein, Balmer (Blériot), Dawson (P. and M.), Bischof (Motosacoche), and Fouquier (Viratelle sc.), make nine retirements in all of the fifty-one starters halfway through the trial.

So far, the competitors had been three days in Switzerland, and had not seen the Alps.

FOURTH DAY.—ZURICH TO LUGANO, 187 MILES.

Heavy rain fell during the morning of the fourth day, making a bad prospect for the journey over the highest Swiss passes. The first important ascent over the Klausen (5,400ft.) was made through heavy rain and thick clouds; it was very cold at the summit. The road was in good condition. Competitors met the Cyclist Alpine Regiment during the ascent, and had a hearty welcome at the Hospice, but were so cold that they could hardly feel their controls at the beginning of the descent.

After lunch at Altdorf, the St. Gotthard climb began with thirty-two miles of long, easy gradients at first, then by abrupt zigzags to Andermatt, and again to the summit (6,900ft.). All were travelling well, including the English team. Lees (3½ Sunbeam) had a no-trouble run, and was enjoying the weather, which was now gloriously fine but cold at this high altitude.

Descent from St. Gotthard.

The descent, by numerous hairpins, was amidst unsurpassed scenery. Hugh Gibson (5-6 Raleigh sc.) was stopped just below the top with tyre troubles, and, as usual, the Salmson cycle car was late, and came down at breakneck speed. It was skilfully driven, but it was a dangerous performance.

Great enthusiasm was not at all evident in the down hill run to Lugano as Monte Cenery had to be climbed after Bellinzona. The control at the finish was beautifully organised, competitors, after parking their machines, being met by cars and driven to their hotels.

It was here decided that J. A. Newman (3½ Douglas) should be allowed to continue, but with loss of marks. He had been an hour late on the second day through punctures. The committee decided that, owing to a doubt in the rules, he should be permitted to proceed, but not so any other competitor getting into a similar plight during the rest of the trial.

Retirements on the fourth day were Willemin (2½ Condor) with magneto trouble, and Cossetto (4 Douglas) with two tyre-bursts.

FIFTH DAY.—LUGANO TO FRIBOURG, 202 MILES.

Another hard day's run proved too long for such difficult country. Fortunately, the Airolo side of St. Gotthard was not

On the frontier. A typical Continental scene—the bridge at Kaiserstuhl looking into Germany.

water jugs, and finally out of glass water decanters. Oil was a great difficulty in this trial, as the local lubricant was unsuitable for British engines.

The afternoon was somewhat tiring, though fine country with a few steep hills up and down was traversed. It was a rich district, with neat, well-kept buildings, and at several of the controls liquid and solid refreshments were offered to the competitors. At the Hulftegg control a group of enthusiasts met Eric Williams and greeted him as a hero to be revered, his prowess in the T.T. having reached even these distant parts. The climb up to this point was stiff, but only troubled some of the smaller Condors.

Descent of the Hulftegg.

Coming down from the summit the road was steep, and here Williams suffered two punctures, and was stung by a wasp. Young Neher (Motosacoche) had a run of bad luck. After a puncture, he tried to make up time descending from the Hulftegg, and had a nasty fall, his light-

as the English variety, but there was plenty of it. Tuzanski (A.J.S. sc.), though he had a puncture on Tuesday, finished the third day quite happy, and his machine had certainly put up a fine performance. The weather clouded over near the finish, and a wind storm sprang up, about which Lees (Sunbeam) complained strongly. He was using Challenger inner tubes, which, up to this point, kept him free of punctures.

The Swiss-riden Triumphs were still giving an excellent account of themselves, but, like many others, have suffered tyre troubles. Eric Williams was distinctly impressed with the trial, and informed us that the engine had to keep "turning over" all the time. He found the event most instructive, but would like to have seen more observed hills. Hugh Gibson's comments were sound as usual. He was still finding the trial of absorbing interest, and said he would not have missed it "for worlds." At the end of the third day, he pointed out that we know little about hills in England, and the

The International Six Days Trial.—

observed, or half the Swiss Army would have been needed; the corners on this side were very loose.

The English team arrived happy at the Bellinzona control, but had suffered nineteen punctures in all. Neher (3½ Motosacoche) remained long, struggling with a tube. He speaks English well, but his language was bad on this occasion! It was cold again at the summit, but before this point Gibson picked up a stone, which jammed his wheel, and Eric Williams had four punctures, and had to drive all out, passing competitors on the descent to Hospenthal, then over the Furka Pass past the Rhône glacier—a glorious sight—up the Grimsel, and on to Meiringen, which was a fearful and wonderful journey. Bouvin (8 Motosacoche sc.) retired before Fribourg was reached owing to a collision and gear trouble.

SIXTH DAY.—FRIBOURG TO GENEVA, 205 MILES.

The last day's run was almost equally stiff, but the competitors were welcomed everywhere. There was a speed hill-climb in the morning at Du Brueck, a long hill with dangerous corners, on which were

Andre Robert (Motosacoche) followed by J. A. Newman (Douglas) on the St. Gothard Pass. Observe the granite posts placed to denote the edge of the road.

several falls. Eric Williams (2½ A.J.S.) made fastest time in his class, despite a broken throttle wire; C. P. Wood (3½

Scott) won the 750 c.c. class; and F. P. Dickson (8 Brough-Superior) was first amongst the 1,000 c.c. solos.

In the afternoon a well-organised speed trial took place, and amongst the class winners Eric Williams (2½ A.J.S.), J. A. Newman (3½ Douglas), C. P. Wood (3½ Scott), and F. P. Dickson (8 Brough-Superior), were again prominent.

At the end of the trial there were thirty-nine finishers out of the fifty-one starters, and amongst those who lost no marks were Eric Williams (2½ A.J.S.), Robert (3½ Motosacoche), Staub (3½ Norton), Rothenbach (8 Motosacoche), and Honel (G.N.).

To summarise, the International Trials this year have been exceedingly severe, and the passes have tested engines to the utmost, since they had to be taken dead slow.

The International Trophy Winners.

For the second time the Swiss team secure the International Trophy, being 151 marks to the good. The trade team prize was secured by the Motosacoche, followed by the Douglas trio. The prize of a gold watch for the best performance by a foreign visitor was secured by Eric Williams (2½ A.J.S.), and the prize offered by the Swiss president was awarded to the G.N.

A study in sinuosity. This road, too, is on the famous St. Gothard Pass, and was traversed by the competitors on the fourth day of the trial.

TWO HUNDRED ENTRIES IN CARDIFF M.C. MEETING.

AFTER the heavy downpour and the terrific gales which lasted throughout the day on Friday, the hearts of the Cardiff M.C. officials must have rejoiced on beholding a satisfactory change in the weather on Saturday morning, when very successful speed trials were held at Porthcawl Sands.

The event, which had attracted over two hundred entries, was run in heats on the "knock-out" principle (from standing starts).

In the smaller classes Harris (New Imperial) put up a very fine performance, although he did not appear to make the best use of his gear box.

Of the sidecar classes, which came next, the premier honours deservedly go to Jack Thomas (3½ Norton sc.), with his wife (who evidently proved to be a good mascot) as passenger, as they carried off the sidecar championship in the 500 c.c. class. The unlimited sidecar class was won by Handel Davies (8 Brough Superior sc.), after a tight race with Boshier Jones (3 A.B.C. sc.).

This event was followed by the ladies' handicap, which was won by Miss I. Fontaine (2½ Levis).

In the general classes, 500 c.c., 750 c.c., and unlimited, there was a keen contest between Nortons and Sunbeams, all the

big machines getting knocked out by the 3½ h.p. singles.

Undoubtedly the best race of the day was Heat 4 in the 500 c.c. class, in which the four riders were Neath members, riding two Sunbeams and two Nortons, and there was not twenty-five yards between all the riders at the finish. The star rider was a comparatively new entrant in competitions, W. Rice Evans (Neath), on a Sports Sunbeam, who carried off the 500 c.c., 750 c.c., and unlimited classes, making the fastest time of the day.

This event was certainly the finest yet run at Porthcawl.

CURRENT CHAT (Continued from p. 169).

A Sporting Northern Event.

The Scott trial this year will be held on Saturday, October 8th.

Motor Cycle Show in Scotland.

As the result of negotiations concluded between the British Cycle and Motor Cycle Manufacturers' and Traders' Union, Coventry, and the Scottish Motor Trade Association, space will be reserved in the Twentieth Annual Scottish Motor Show for the exhibition of motor cycles and tricars. The exhibition is to be held from January 27th to February 4th (inclusive), 1922.

The A.C.U. Trials.

The criticised oil and petrol allowances for the various classes in the A.C.U. Six Days Trial are as under, and do not include the test on Brooklands:

	Fuel.	Oil.
	m.p.g.	m.p.g.
250 c.c. solo ..	100 ..	1,800
350 c.c. solo ..	90 ..	1,500
500 c.c. solo ..	75 ..	1,000
750 c.c. solo ..	60 ..	800
1,000 c.c. solo ..	50 ..	600
600 c.c. sidecar ..	50 ..	550
1,000 c.c. sidecar ..	45 ..	500

Price Reductions.

The A.J.S. prices have now been reduced. The 7 h.p. sidecar outfit is now £195 instead of £215, and the lightweight is reduced from £105 to £95.

Sporting One Day Trial in Cumberland.

Next Saturday the Cumberland County M.C.C. is holding a one-day open sporting trial. Late entries may still be received by Mr. J. J. Dias, 24, Bank Street, Carlisle.

A Sweepstake Hill-climb.

With a view to stimulating club activities, the Edinburgh and District M.C. purposes holding an inter-club sweepstake hill-climb on September 10th, the following being the outlined conditions:

- 1.—Each club will be represented by five separate riders on five separate machines, one up to 350 c.c., two up to 500 c.c., one unlimited capacity (all solo), and one sidecar unlimited capacity.
- 2.—One club one team only.
- 3.—Time only to count—the smallest aggregate time to win.
- 4.—Time permitting, each rider will have two ascents of the hill, the better time to count.
- 5.—No restrictions regarding equipment.
- 6.—The timing will be electrical.

7.—The entry fee is ten guineas per team, the winning club to take the whole entry money, no deduction being made for organising costs.

8.—While the actual team need not be nominated till one hour before the start, entries from clubs must be sent in not later than the 27th inst.

9.—The organising club will require each club entering to nominate one official to represent them.

10.—The selected hill is in the South of Scotland, and is not only very suitable, but also of the "safe" variety.

Already the promoting club has promises of teams, and a representative entry from England as well as Scotland is anticipated. All communications should be addressed to the Secretary, 6, Castle Terrace, Edinburgh.

Mechanical First Aid for Motorists.

The A.A. Road service outfits were fully occupied during the recent Bank Holiday period in assisting motorists with stranded vehicles. In addition to giving roadside and other information to over five hundred motorists, these A.A. road patrols rendered assistance in connection with 380 minor breakdowns and mechanical troubles, and were able to help seventy-four owners of cars and motor cycles stopped by serious causes.

THE CARDIFF M.C. SPEED TRIALS AT PORTHCAWL LAST SATURDAY.

A tussle between a big and a small twin in the sidecar championship heat. The Brough Superior (on the right) and the A.B.C. ran level for a great distance, the former eventually drawing ahead.

CLUB NEWS. (Continued from page 175.)

Reigate, Redhill, and District M.C.C.

Eighteen members took part in the recent trial for the president's cup, the winner being F. Bowers (3 A.B.C.).

Gravesend and District M.C.C.

As the result of a very successful reliability trial, held on the 28th ult., a club has now been formed as above. A membership of thirty practical riders has already been secured. Mr. E. Mitchell, of the Reporter Office, Gravesend, being appointed secretary, and the Rev. R. C. Measures, a well-known local competition rider, organising secretary.

Eastern Centre A.C.U.

A rally of the clubs in this centre will take place on August 21st, the venue being Culford Park, Bury St. Edmunds (by the kind permission of Lord Cadogan). It is hoped that as many clubs as possible will be in attendance. Any unattached riders in the counties of Essex, Suffolk, Cambridge, and Norfolk, are also cordially invited.

CIO

Blaenavon M.C.C.

All entries and enquiries regarding the inter-team trial for the Daniel challenge shield, to be held on the 27th inst., should be addressed to Mr. D. J. Daniel, Lime Kiln House, Blaenavon.

Clitheroe and District M.C.C.

This club is holding a circuit reliability run on August 21st confined to members only for the Motor Traders silver bowl, etc. The hon. sec., Mr. H. Sainsbury, 27, Castle View, would be pleased to get in touch with any new members desirous of joining the club who would then be eligible to compete. Entries close on the 17th inst.

Hartlepool M.C.

On the 27th ult. a commendable pre-war custom of this club was revived, when about 120 crippled children were taken for a ride in cars and sidecars. The outing included games and tea for the little guests; and, in addition, a sum of £17 11s. was subscribed by those

members who were not able to take an active part in the proceedings.

Folkestone and District M.C.C.

There are still vacancies for a few more members in this newly-formed club. Mr. P. J. Halt, "Ellerslie," 23, Bournemouth Road, Folkestone, is the hon. secretary.

North Monmouthshire M.C.C.

Results of a joint reliability trial held on August 1st have now been announced as follows:

BEST SOLO PERFORMANCE.—M. Evans (4 Triumph), Blaenavon.

BEST SIDECAR PERFORMANCE.—M. Hudson (8 Sunbeam sc.), Abergavenny.

BEST LIGHTWEIGHT PERFORMANCE.—W. Davies (2½ Hawker), Abergavenny.

GOLD MEDAL AWARDS.—A. J. Watkins (3½ Scott), M. Hudson (8 Sunbeam sc.), M. R. Lewis (3½ Scott), A. Nicklin (4½ B.S.A.), A. Williams (10 G.N.), T. Jones (2½ Douglas), Geo. Williams (4½ B.S.A.), H. Westwood (8 Eofield sc.), H. Dickinson (3½ Scott), R. Corcoran (4 Triumph), M. Evans (4 Triumph), A. Williams (4 Norton), A. Parfitt (6 Sun-Jap), and T. Wakefield (4 Triumph).

SILVER MEDAL AWARDS.—W. T. Cook (2½ Douglas), A. Stevens (3½ Sunbeam), Geo. Jayce (3½ Sunbeam), B. E. Evans (8 Matchless sc.), and W. Davies (2½ Hawker).

A.C.U. SIX DAYS TRIALS.

Entry List closes at Ordinary Fees with a Good Total of Competitors.

DESPITE the somewhat - stringent regulations framed for the A.C.U. Six Days Trials on August 29th to September 3rd, there has been a much better support from the manufacturers than was expected in trade circles generally. - This is probably due to the sporting spirit of many competition managers who realise that, however difficult the conditions render the trial, every competitor has an equal chance.

Although there are no freak hills included this year, the trial will be somewhat strenuous, as will be seen from the accompanying contour of Wednesday's route.

So far the following entries have been received; the lists are, however, open at double fees until Saturday next:

The Porlock, Countisbury, and Lynton hills are now, of course, familiar ground to the majority of competition riders, and, except for Wednesday's severe route, the greatest difficulty of the trial undoubtedly will lie in fulfilling the various technical requirements, such as maintaining the necessary speed for the given number of laps on-Prooklands and the attainment of the given mileages per gallon of oil and petrol from Monday until Friday.

Contours of the Wednesday morning's route, which promises to be the most trying ninety miles of the trials.

MOUNTAINEERING IN NORTH WALES.

Inclusion of Alt-y-Bady in the North Wales M.C.C. Open Trial causes Many Failures and Several Retirements. 110 Starters; 62 Finishers.

A Triumph quartette at the foot of Bwlch-y-Groes. Observe how the riders are taking the outside edge immediately before the acute bend. The riders are: R. Edwards, J. Edwards, W. L. Fincher, and C. Lightening.

THAT Alt-y-Bady retains an undisputed right to the title of "the most difficult trials hill" was generally acknowledged by the 110 competitors in Saturday's (North Wales M.C.C.) open trial. Whether, on the other hand, Alt-y-Bady was a fair test for inclusion in such an event is a question upon which opinions differ. The great majority of the competitors, however, seemed perfectly contented to lose their "golds" on this uneven stretch of 1 in 3 behind Llangollen, and, this being so, the justification or otherwise of the hill may well be left for discussion at some other time.

Alt-y-Powls not Difficult.

Starting from Denbigh, the route went through Abergele to Llanfair T.H., where started the first non-stop section and the first observed hill, Alt-y-Powls. (It should be noted that "T.H." does not stand for "test hill"; it is merely a considerate abbreviation on the route card of the full seventeen-letter name of the hamlet). Before getting thus far, however, one rider, P. J. Thomas (3½ Rover) was in trouble, colliding on a bend with a non-competing motor cyclist coming in the opposite direction. Despite a bruised arm, he pluckily carried on.

Alt-y-Powls had dried surprisingly quickly after the preceding day's down-pour, and the observers were noted to be jotting down "O.K.'s" with monotonous regularity.

About a mile further on, and still in the non-stop section, there came a muddy descent of 1 in 5 or thereabouts, and, had an official observer been posted here, he would have done useful work towards limiting the gold medal issue.

110 Miles After Lunch.

Through Llanrwst, Bettws-y-Coed, Blaenau-Festiniog, and Tyn-y-Groes to the lunch stop at Dolgelly was a straightforward run, the last section being non-stop simply to make an arrival to schedule more difficult. At the lunch table there were one or two complaints—not wholly without reason—regarding the paucity of the arrowing, but most of the conversation turned on the apparent fearfulness of the afternoon's run. One hundred and ten miles to go, five test hills, and a watersplash, for which all the local riders carried auxiliary exhaust pipes—obviously the worst of the trial was yet to come.

Bwlch-y-Groes was in excellent condition, and, until a heavy shower stopped two of the solo machines through belt slip, no failures were reported. It was touch and go for some, however, although Reg. Brown's 3½ h.p. Sunbeam and Sam Wright's 4½ h.p. Humber sidecars both got up without apparent difficulty.

Fortunately, the rain had ceased before the leading men reached Llangollen, and Alt-y-Bady, beyond the bend, had begun to dry, and looked fairly climbable. A large crowd occupied positions of con-

siderable danger at either side of the road, but not until No. 18, S. V. Jones (3½ Norton), came up were they treated to anything approaching a clean climb.

B. Kershaw and D. Prentice (2½ and 2½ New Imperials respectively) both earned the applause with which the ascents were greeted, but G. I. Francis (2½ Francis Barnett) stopped at the halfway mark (i.e., about twenty yards round the corner); he got away under power.

Then came the only lady competitor, Miss Marjorie Cottle (4 Triumph), who had been piloting her big machine with quite as much skill as eighty per cent. of the men. Just as it seemed that she had conquered the grade, the Triumph inexplicably lost all forward motion, and she also had to make a restart. G. Mason's 2½ h.p. Connaught went up without outside assistance and only very slight assistance from the rider—a most creditable performance.

Pre-war Twin on Alt-y-Bady.

R. Russell Bromley and M. W. Hall, private owners on Sunbeams, both failed, but eventually reached the summit. Then T. R. Drutt, on a seven-year-old 6 h.p. Enfield toured up with his feet on the footrests, his very nonchalant so surprising the onlookers that they forgot to applaud. Everything considered, Drutt's climb must rank amongst the best three.

Mountaineering in North Wales.—

Handley and his O.K.-Union somehow got broadside on, and then commenced a series of alarming somersaults down the hill. When both were picked up, Handley seemed least dismayed of all, and soon carried on. Norman Norris (2½ Arms) climbed without outside help, while Oswald Hayes (3½ Sunbeam) was prematurely cheered for a very fast dash into the bank near the top! L. Crisp (4½ Humber) followed Hayes with a very good attempt, but ending with the same fate; but his brother, also on a

Among the tail end soloists, G. F. Burns (3½ Sunbeam) made a magnificent ascent, proving that even then the hill was not unclimbable by a first-class rider and machine.

Only Two Clean Sidecar Climbs.

It was freely opined that no passenger machine would get up. When such well-known drivers as H. Boynton (7 James sc.), B. Bladder (8 New Imperial sc.), J. H. Walker (4½ B.S.A. sc.), G. E. Stobart (7 James sc.), and J. E. Greenwood (3½ Sunbeam) all charged up and

it would be difficult to say which of the two was the better.

Slower, but no less sure, Sam Wright (4½ Humber sc.) was the only other competitor in the three-wheeler class to make a clean climb with "passenger normally seated," thus earning ten bonus marks and salvos of well-deserved cheers. (The Humber's engine is only 600 c.c.) The crew of the 2½ h.p. Hawker sc. walked alongside, but the little engine propelled the light outfit up quite nicely; and, finally one of the Matchless outfits made a non-stop passage with the passenger on the carrier.

After the Alt-y-Bady *débacle*, Dol-y-wern was almost child's play, as was the non-stop section from Pentre Dwr to Dafarn Dwyrch (for a considerable number of those who were finding the course too difficult for them had retired at, or near, "Alt-y").

Fording a Stream.

But Llanfihangel "watersplash" was a different matter. As an interesting free show for the villagers, who no doubt greatly enjoyed seeing Miss Cottle take a ducking, the fording of this stream was an admirable idea, but as an eliminating agency in an open *reliability* trial it was quite superfluous, especially in an event organised by a club with the Llangollen terror "on its doorstep." We are glad therefore that the committee has decided to relieve those who failed to pick a clean path over large, round boulders 18in. below the surface of a stream. Even then

On the most difficult trials hill in Wales—Alt-y-Bady. (Left) F. W. Giles (7 A.J.S. sidecar) who shared the honour with S. Wright (4½ Humber sidecar) of making the only clean sidecar climb. (Right) H. Boynton (7 James sidecar), who took the hill at a good speed, but failed through wheelspin.

Humber, made a very fine ascent—clean and fast. W. Brandish, on the third Humber, was, if possible, even better. Crisp, unfortunately, retired with a box trouble a little further on, thus eliminating one of the most "dangerous" teams.

Experience Tells.

George Dance (3½ Sunbeam) more than held his reputation, making an effort, fast, and clean ascent; while W. Williams (5-6 Raleigh) was almost as ill, albeit his engine was smoking excessively. To lend variety to the proceedings, L. A. Welsh (4½ B.S.A.) lay down several times, while H. V. Collins (Marloe) made a wonderful attack on the bank. W. Isbill (4 Triumph) just succeeded, unaided; while E. Foster (6 Raleigh) chased a spectator on to the road, and very nearly killed a dog. Another shower was now making itself felt on the road surface, the last dozen or so solo men being consequently unlucky.

bounced to a standstill—usually with spinning wheels—this seemed a true prediction. But a few minutes later, F. W. Giles (7 A.J.S. sc.) tore round the bend, bouncing (or being bounced) so energetically that it appeared as if he were literally dragging his outfit up by sheer effort. His passenger remained seated, and he disappeared over the brow at a cool 15 m.p.h. H. F. S. Morgan (8 Morgan), helped by Mrs. Morgan, repeated Giles's success, if slightly less spectacularly, and

it was not very enjoyable to get wet feet between eight and nine at night and after 160 miles of the worst going that mountainous North Wales could provide. It says much for the weatherproofness of the modern motor cycle, however, that, to the best of our knowledge, not one retirement was caused by this freak "splash."

It was well after lighting up time before the sidecarists reached the finish: and although a commendable attempt was

Mountaineering in North Wales.—

made to get the results out on Sunday, some of the observers were also non-finishers, and it is not expected that an award list will now be available until late this week, but the list of finishers is appended.

Rex Mundy (7 A.J.S. sc.).
Sam Wright (4½ Humber sc.).
H. E. Ashley (6 L.M.C. sc.).

THE BELGIAN GRAND PRIX.

Chances of a British Success in the 200 Mile Continental Road Race.

TO-MORROW the Belgian Grand Prix race will be decided over a triangular course of nearly ten miles, with Malmédy, Francorchamps, and Stavelot as apices.

As in the T.T. and the French Grand Prix, there are classes for 500 c.c., 350 c.c., and 250 c.c. machines; but, owing to lack of entries, the 350 c.c. class has had to be abandoned. The "Senior" race will consist of twenty circuits, while the lightweights must make fifteen.

British Chances Favoured.

It will be seen from the appended list of entries that several well-known British riders are represented. Graham Walker and H. W. Hassall will ride Nortons; while a strong trio, in Edmond, Sgonina, and Shemans, will endeavour to annex honours for the Triumph camp.

H. Le Vack and E. W. Dixon, on their T.T. Indians, will no doubt prove dangerous competitors to the British machines, while the Saroleas are reputed to be fast, and gain some advantage by the fact that their riders are racing on familiar ground.

Three Belgian riders were originally entered to ride the Triumph machines, c18

**THE BELGIAN GRAND PRIX COURSE.**

The circuit is nearly ten miles and will be covered twenty times by the 500 c.c. machines.

and the substitution of such riders: Edmond, Sgonina, and Shemans would indicate that this entry is a serious one.

However, a British victory in the 200 c.c. class is confidently expected, while the only British lightweight may get a walk-over if, as at the moment, writing seems probable, the two 250 c.c. machines will not run.

Great local interest is taken in the entry of Le Vack and Dixon on account of their success in the T.T.

500 c.c. CLASS.

1. Breslau (Norton).
2. Graham Walker (Norton).
3. Hassall (Norton).

3. Joha (Rush).

4 Standard Renold —

EVER since the inception of the Chain-driven Motor Cycle, Renold *Standard* chains have been adding success to success. The Standard chain, used by Mr. H. Le Vack on his winning Indian in the Brooklands 500 mile race, was purchased in January, 1921, and represents the logical and consistent progress founded on research, hard work, and engineering intelligence since the basic idea was formed over 40 years ago.

Write now for new illustrated leaflet, giving current prices, methods of repairing, and fitting of chains.

The standard chains which attain such notable achievements in the most strenuous Motor Cycle races of to-day will undoubtedly meet your need———racing or touring.

ADVERTISEMENTS in these columns—First 12 words 3/—, and 3d. for every additional word. Paragraphs of under 8 words are charged double rate. Each paragraph is charged separately. Name and address must be counted. Series discounts, conditions, and special terms to regular trade advertisers will be quoted on application.

Postal Orders and Cheques sent in payment for advertisements should be made payable to **ILLIFFE & SONS Ltd., and Co.** Treasury Notes, being untraceable if lost in transit, should not be sent as remittances.

All advertisements in this section should be accompanied with remittance, and be addressed to the offices of "The Motor Cycle," 20, Tudor Street, London, E.C.4, or 19, Hertford Street, Coventry. To ensure insertion letters should be posted in time to reach the offices of "The Motor Cycle," by the first post on Friday morning previous to the day of issue. Advertisements that arrive too late for a particular issue or that are crowded out will automatically be inserted in the following issue unless accompanied by instructions to the contrary.

All letters relating to advertisements should quote the number, which is printed at the end of each advertisement, and the date of the issue in which it appeared.

The proprietors are not responsible for clerical or printers' errors, although every care is taken to avoid mistakes.

NUMBERED ADDRESSES.

For the convenience of advertisers, letters may be addressed to numbers at "The Motor Cycle" Office. When this is desired, the sum of 6d. to defray the cost of registration and to cover postage on replies must be added to the advertisement charge, which must include the words Box 000, c/o "The Motor Cycle." Only the number will appear in the advertisement. All replies should be addressed No. 000, c/o "Motor Cycle," 20, Tudor Street, E.C.4. Readers who reply to Box No. advertisements are warned against sending remittance through the post except in registered envelopes; in all such cases the use of the Deposit System is recommended, and the envelope should be clearly marked "Deposit Department."

In the case of motor cycles offered for sale under a box number, as it is unusual for these to be sold without first being inspected by the intending purchaser, advertisers will facilitate business by embodying in their advertisements some mention of the district in which the machine offered may be seen and tried.

DEPOSIT SYSTEM.

Persons who hesitate to send money to unknown persons may deal in perfect safety by availing themselves of our deposit System. If the money be deposited with "The Motor Cycle," both parties are advised of this receipt.

The time allowed for a decision after receipt of the goods is three days, and if a sale is effected we remit the amount to the seller, but, if not, we return the amount to the depositor, and each party to the transaction pays carriage one way. For all transactions up to £10, a deposit fee of 1/- is charged; on transactions over £10 and under £50, the fee is 2/6; over £50 and under £75, 5/-; over £75 and under £100, 7/6; and on all transactions over £100, 10/6. All deposit matters are dealt with at 20, Tudor Street, London, E.C.4, and cheques and money orders should be made payable to Illiffe & Sons Limited.

The letter "D" at the end of an advertisement is an indication that the advertiser is willing to avail himself of the Deposit System. Other advertisers may be equally anxious, but have not advised us to that effect.

SPECIAL NOTE.

Readers who reply to advertisements and receive no answer to their enquiries are requested to regard the notice as an indication that the goods advertised have been ready disposed of. Advertisers often receive so many enquiries that it is quite impossible to reply to each one by post.

MOTOR CYCLES FOR SALE.

When Indian meets Indian!

THEN COMES THE TUG OF WAR

The rider of an Indian (whether the 7 h.p. Passenger Combination, or the 4 h.p. Scout) has little to fear from anything else on the road, except—another Indian.

Godfrey's, Ltd., Sole London Agents since 1911, can give immediate delivery of a few new 1921 models at the following **GREATLY REDUCED PRICES:**

7 h.p. Indian Powerplus—
Cradle spring frame, clutch, kick-start, 3-speeds, full electric equipment and speedometer, with Indian coachbuilt sidecar..... **£198**
(Retail Price £226.)

4 h.p. Indian Scout—
Rigid frame, 3-speed, kick-start, clutch and speedometer..... **£132**
(Retail Price £157.)
With coachbuilt sidecar..... **£164**
Extra for dynamo lighting .. **£16**

We can only offer at these special prices by reason of these machines being slightly shop-soiled. Otherwise they are absolutely brand new and unused.

COLMORE WILL help you when in difficulties.

When touring and any replacement parts are required urgently, get in touch with

31, Colmore Row, Birmingham
24, Paradise Street, Liverpool.
200, Deansgate, Manchester.
62, High Street, Leicester.

All the above depots have special departments to deal with spare parts. We reproduce this letter as an example of the practical assistance we can give to ALL Motor Cyclists.

Dear Sirs,
I would take this opportunity of thanking you for the manner in which you so quickly obtained the clutch and got through the repairs, enabling me to get on my journey. I am sure that no firm could have done more than you did, and I shall keep this point in mind when I am next in the market for another machine.

Yours faithfully
W.D.B.

We are agents for:

Levis, Douglas,
Triumph, Matchless,
A.J.S., Martinsyde,
New Hudson.

And have an efficient "Repairs Service" which we place at the disposal of ALL.

Surely the satisfaction we have given to others we can also give to YOU.
